Journal, 1850. "At the Concord celebration I was struck with the talent of Everett and Choate and the delight of the people in listening to their eloquence. In the London Lord Mayor's banquet lately, Lord Lansdowne and Lord Stanley were distinguished, I observe, in like manner. It is of great worth, this stump-oratory (though much decried by Carlyle and others), and very rare. There have been millions and millions of men, and a good stump-orator only once in an age. There have been but a few since history began; Demosthenes and Chatham and Daniel Webster and Cobden,—and yet all the human race are competitors in the art. Of course the writers prefer their own art. Stump-oratory requires presence of mind, heat, spunk, continuity, humanity."

N1843: This passage, which first belonged in a lecture on The Poet given in 1841, seems to have been suggested by Webster's rugged yet commanding personality. The next sentence describes

"Father" (Edward T.) Taylor of the Seamen's Bethel at the North End of Boston. In the journal Mr. Emerson wrote of his preaching in Concord in June, 1841: "It was a pleasure yesterday to hear Father Taylor preach all day in our country church. Men are always interested in a man, and the whole various extremes of our little village society were for once brought together. Black and white, poet and grocer, contractor and lumberman, Methodists and preacher, joined with the regular congregation in rare union."

N1844: This passage in the lecture followed: "We are taught that earnest, impassioned action is most our own; and are invited to try the deeps of love and wisdom,—we, who have been playing and parading so long."

N1845: Here is a reminiscence of Mr. Emerson's youthful pursuit of orators, from a lecture on Genius given in 1839:—

"The man of genius is the typical man, the measure of all the possibilities of the soul. See the effect of eloquence. Go into Faneuil Hall and see how the pinched, wedged, elbowed, sweltering assembly, when the chosen man rises, hang suspended on his lips. Each, while he hears, thinks that he too can speak; life is communicated to our torpid powers, and an infinite hope."

N1846: Although the opening sentence was given in a note in "Social Aims," it seems best to give the portion not printed here of the extract from Mr. Emerson's journal describing Judge Hoar's courage and success at a town-meeting called in Concord in November, 1863, to deal with the difficult question of making up the town's quota of soldiers when volunteering had well-nigh ceased:—

"At the town-meeting, one is impressed with the accumulated virility of the four or five men who speak so well to the point, and so easily handle the affairs of the town: only four last night, and all so good, that they would have satisfied me, had it been in Boston or in Washington. The speech of Judge Hoar was perfect,—and to that handful of people who heartily applauded it. When a good man rises in the cold and malicious assembly, you think," etc.

N1847: On a stray sheet another version of the preceding passage runs as follows:—

"No act indicates more universal health than eloquence. Will, memory, invention, language of nature and a great common sense, a great coördinating mind, belong to its equipment. We see the mind in fragments, here a faculty, and there one,—rarely the majestic whole: but for this art there must be a great combination of powers. It is incredible beforehand that such a result can be as is realized in one of its masters."

At this point in the lecture, Mr. Emerson said: "I am fully aware of the imprudence of venturing on a topic like this, since to do it justice requires the very power it describes." He then admitted that a reason for choosing this dangerous subject was the opportunity it gave him of reading some examples of eloquence. This he did on some occasions, as has been already said.

N1848: This passage was, in the lecture, thus continued: "and you will observe what sweet nitrous oxide gas all the orators appear to breathe. Once they taste it, they cling like mad to the bladder and will not let it go."

N1849: In the essay on Behavior in *Conduct of Life* is a remarkable description, taken from Mr. Emerson's journal of 1837, of the victory of the old President over all impediment and infirmity in his speech, although he is not named.

N1850: It is certain that Mr. Emerson valued the speech recorded in the journal of 1853 as a high compliment:—

"At Jackson, Michigan, Mr. Davis, I believe, a lawyer of Detroit, said to me on coming out of the lecture-room, 'Mr. Emerson, I see that you never learned to write from a book.'"

N1851: These were his words on the speech of the New Hampshire villagers:—

Fourscore or a hundred words
All their vocal muse affords;
But they turn them in a fashion
Past clerks' or statesmen's art or passion.
I can spare the college bell
And the learned lecture well;
Spare the clergy and libraries,
Institutes and dictionaries,
For that hardy English root
Thrives here, unvalued, underfoot.

"Monadnoc," *Poems*.

N1852: In the lecture these words followed:—

"And hence too it is certain that all biography is autobiography; or, whatever anecdote floats in the world concerning any man was first communicated by himself to his companion;—all else is wide of the mark."

This sentence recalls Mr. Emerson's words in the Phi Beta Kappa oration of 1838:—

"The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public, most universally true."—"The American Scholar," *Nature, Addresses and Lectures*.

N1853: I am indebted to Mr. F. B. Sanborn for the correct date of Lord Ashley's speech, which in previous editions has been incorrectly given. Macaulay tells the story in chapter xxi. of his *History of England*. Mr. Emerson apparently found it in the *Letters of Lady Russell*, and though the substance of what Lord Ashley said is the same, the words are different from those given by Macaulay.

After the incident of Lord Ashley, Mr. Emerson introduced into the lecture a story, given below, which the Editor heard Mr. Phillips himself tell in Concord, in a chat at the house after his lecture before the Concord Lyceum. It may be well to preface it by Mr. Emerson's mention of Mr. Phillips's gifts, which he admired:—

Journal, 1862. "Wendell Phillips gives no intimation of his perfect eloquence in casual intercourse. How easily he wears his power, quite free and disengaged, nowise absorbed in any care or thought of the thunderbolt he carries concealed. I think he has more culture than his own, is debtor to generations of gentlemen

behind him. But I think Phillips is entirely resolved into his talent. There is not an immense residuum left, as in Webster."

Here is Mr. Emerson's record of Mr. Phillips's adventure:—

"An incident occurred some time ago, which was so good in its kind, that I may be pardoned for recalling it, though not strictly within the proprieties of the place.

"Cassius M. Clay and Wendell Phillips were both to speak at New Haven on one day, and almost at the same hour,—Mr. Clay, an agricultural address before the State Society at half-past 6 o'clock. Mr. Phillips, before the Lyceum, at 7.45. Mr. Clay really gave Mr. Phillips his audience, by closing his own address before 7.30 o'clock, and went himself to attend Mr. Phillips's lecture, and the whole audience with him. So Mr. Phillips opened his discourse with some compliments to Mr. Clay, acknowledging the kindness, and all the more, because, he said, 'it was known how widely they differed,' and referred to the fact that Mr. Clay had said, that, 'if a contest should arise between the whites and the negroes, his own part would be taken with the whites.' The audience gave three cheers for Mr. Clay. 'Well,' said Mr. Phillips, 'this, then, we must reckon the roll-call on that side,—the distinguished senator, and the white population in the States.' The audience instantly repeated their cheers. Mr. Phillips thought himself in a bad plight for the beginning of a speech, but rescued himself by saying, 'Well, gentlemen, now let us see the matter on the other side. Thomas Jefferson says, "that in this contest the Almighty has no attribute but must take part with the Slave." Mr. Clay and the Southern gentlemen on one side, and all the attributes of the Almighty on the other.'

"The audience were utterly silenced, and Mr. Phillips proceeded with his speech."

N1854: In his speech on the Fugitive Slave Law Mr. Emerson made personal application of his thought:—

"Nobody doubts that Daniel Webster could make a good speech. Nobody doubts that there were good and plausible things to be said on the part of the South. But this is not a question of ingenuity, not a question of syllogisms, but of sides. *How came he there?*"

N1855: Dr. James Hutchison Stirling, the author of *The Secret of Hegel*, a book valued by Mr. Emerson. Dr. Stirling took a very active interest in the nomination of Mr. Emerson for Lord Rector of Glasgow University by the students in 1874. At the election Mr. Emerson received some five hundred votes, and Disraeli, then prime minister, was chosen by a majority of about two hundred votes. Dr. Stirling is still living.

RESOURCES

THE LECTURE "Resources" was the third, following "Social Aims," in a course on American Life given in Boston in December, 1864, and January, 1865. Its topic was one that all the people of the United States had then brought home to them in earnest. The long drain which four years of war had made upon their lives, their fortunes, their courage and hopes made Mr. Emerson's word of cheer timely and welcome. But the essay represents only a scant half of what was then said. Many of the sheets used are marked on one corner "War," showing that they had done duty in some other cheering address in the anxious and sad days, and many with the same mark, more immediately dealing with the conditions of the day, are omitted. But nearly all of the latter half, the ascension to a loftier plane, such as occurs in all his lectures, was taken for a later lecture on Inspiration, and much of it is found in the essay of that name later in this volume.

N1856: Journal, 1869. "I have written before that no number of Nays will help,—only one Yea, and this is moral."

N1857: Among the manuscript leaves I find this other version of the paragraph:—

"I delight in the man of resources. I am cheered by the bold and resolved mind. I like to see that every mind is born with a bias or talent, has a way of his own into Nature; that Nature has given him a private key, and I notice that not only the display of grand ability, penetration into the secret of largest laws, and so the working on nations and times, instructs us, but that every anecdote, where a sharper observation of Nature in some particulars bestows some petty advantage, gives a fillip to the attention and to our courage."

N1858:

No ray is dimmed, no atom worn,
My oldest force is good as new,
And the fresh rose on yonder thorn
Gives back the bending heavens in dew.

"Song of Nature," *Poems*.

N1859: Here came in several sheets now included in "Works and Days," in *Society and Solitude*.

N1860: Two sheets, giving a story, such as often garnished Mr. Emerson's lyceum lectures, and a sudden return to the more serious aspects, may be here inserted in the place they once occupied:—

"There is a story of an old lady who was carried to see a mountain and a cataract, and afterwards shown the steam-mill and the new railroads, and, very grateful and a little confused, she said, 'God's works are great, but man's works are greater.'"

"There does not seem to be any limit to these new applications of the same spirit that made the elements at first, and now through man works them. Art and power will go on as they have done, will make day out of night, time out of space, and space out of time."

N1861: Mr. Emerson often alludes with pleasure to the Dutch horticulturist whose theory, given in Downing's book on Fruits, pleased him. Journal, 1842: "Delights in Van Mons and his pear in a state of melioration; to be liquid and plastic,—that our reading or doing or knowing should react on us, that is all in all."

N1862: Mr. Emerson had been greatly interested in the hopeful writings on political economy of Mr. Henry Carey of Philadelphia, referred to in the essay on Farming in *Society and Solitude*, and especially in a remarkable pamphlet, issued about the time of the ending of the Civil War, called *Our Burden and our Strength* by David A. Wells, from which he quoted in the lecture.

N1863: Mr. Emerson had lately read in the *Atlantic Monthly* the entertaining and highly interesting story of the march of the New York Seventh Regiment from Annapolis to Washington, by Major Theodore Winthrop, who fell in the action at Big Bethel. In this, the extraordinary variety of ability to deal with each new emergency which was shown by the Eighth Massachusetts Regiment was set forth with due praise.⁹² The following reference to that regiment from another quarter was in the lecture:—

"The whole history of our Civil War is rich in a thousand anecdotes attesting the fertility of resource, the presence of mind, the skilled labor

⁹² "New York Seventh Regiment. Our March to Washington." *Atlantic Monthly*, June, 1861.

of our people. The *National Intelligencer* said of the Eighth Massachusetts Regiment at Annapolis, 'Probably no other regiment in the country could do what this regiment did,—put a locomotive together, lay the rails on the broken railroad, bend the sails of a man-of-war (the frigate Constitution), and man and work the frigate.'"

N1864: Here followed several instances of happy expedients used on the farm to meet its constant emergencies, and a new paragraph of the expedients which soldiers and explorers devise opened thus:—

"Again in danger the history of the savage, the history of war, of passion, abound in examples where the wit of man is all in all: where is no outward aid, but all depends on personal qualities and presence of mind."

N1865: This paragraph originally was continued by the account of the sure instincts of Indians in the forest, some of the stories gathered from Thoreau's account of Joseph Polis, his Indian guide, in Maine.

N1866: Quoted from the remarkable *Mémoires* of Blaise de Montluc, a Gascon officer under Francis I. and several succeeding kings of France, whose valor, skill and fidelity made him a Marshal of France.

N1867: Asmodeus, a familiar spirit mentioned in The Book of Tobit in the Apocrypha, and in mediæval books of magic. The keeping him employed by twisting a rope out of sand is spoken of by Mr. Emerson in several essays. Mr. Emerson likened his own task, of arranging his thoughts into lectures, to the Spirit's:—

The Asmodean feat is mine
To spin my sand-heap into twine.

N1868: This passage followed in the lecture:—

"An old scholar said to me very many years ago, when speaking of his own methods, 'I build: in the morning I am athletic, and begin with Hebrew for foundation; after that I am still good for Greek; later in the day, I can read philosophy and history; in the afternoon poetry and the journals.'"⁹³

N1869: It is strange to recall how much less common the study of Nature or any especial branch of natural history for pure pleasure was in those days than now. Since Thoreau opened the way with his *Week on the Concord and Merrimack Rivers*, perhaps his best book, but unsalable in its day, the increasing interest and delight in out-of-door pursuits has given rise to an admirable literature on the subject, the works of Bradford Torrey, Rowland Robinson, Olive Thorne Miller, Frank Bolles, Burroughs, Gibson, Thompson Seton and Long,—more each year.

Mr. Emerson wrote in those days, "To Nero advertising for a new pleasure, a walk in the woods should have been offered."

N1870: Shakspeare, *Hamlet*, Act I., Scene 5.

N1871: This is the beginning of one of the songs of the Welsh Bards.

N1872: As has been said in the introductory note to this essay, the suggestion of resources of the higher class was transferred by

⁹³ This was Mr. Emerson's respected friend, Rev. Nathaniel L. Frothingham.

Mr. Emerson to the chapter on Inspiration, but this on memory, as a reserve on which to fall back at need, remains:—

"It is certain that our own youth exerts an enormous influence through all our life: a most disproportionate part of our happiness comes from the recollection or restoring of its images and feelings. There is no poetry or sentiment, no love of beauty, which does not draw a charm from its reminder of that magazine of good. Genius and virtue seem to be only a preternatural prolongation of that. It is a little sad that we should always be spending on this patrimony, instead of multiplying a thousand-fold our original stock."

THE COMIC

IT WOULD be fair perhaps to say that Mr. Emerson approached this subject with less sympathy than almost any other, except the Tragic or negative point of view. But here was a fact to be disposed of. He finds fun to be an affair of the intellect quite detached for the moment from moral considerations and startled into mirth by some preposterous contrast between apparent promise and actual performance. But a protest runs through all his work against the divorce between the intellectual and the moral, hence comic license must be sparingly granted. His natural serenity and dignity protested against being victimized by a spasm of the diaphragm and facial muscles at the will of another, and he might almost have said with Lord Chesterfield, "I am sure that since I had the use of my reason no human being has ever *heard* me laugh." But if he had not wit according to his conception of it, he had that better quality into which human sympathy and kindness enter as largely,—the saving sense of humor which crops out continually in his lectures. Ridicule and sarcasm were impossible to him. If he was not witty at others' expense, he often was at his own. He was always cheerful; what he saw in life made him happy, and in conversation in the

family and with friends he was almost gay and often very amusing. Two subjects, Love and Death, were to him, and in his presence, always held sacred from jest.

This lecture, called "Comedy," was the eighth, following "Tragedy," in the course on Human Life given in Boston in the winter of 1839–40. It was published in the *Dial* for 1843.

N1873: In the *Dial* the lecture opened with this paragraph:—

"It is a nail of pain and pleasure, said Plato, which fastens the body to the mind. The way of life is a line between the regions of tragedy and comedy. I find few books so entertaining as the wistful human history written out in the faces of any collection of men at church or court-house. The silent assembly thus talks very loud. The sailor carries on his face the tan of tropic suns and the record of rough weather; the old farmer testifies of stone walls, rough wood-lots, the meadows and the new barn. The doctor's head is a fragrant gallipot of virtues. The carpenter still measures feet and inches with his eye, and the licensed landlord mixes liquors in motionless pantomime. What good bargains glimmer in the merchant's aspect. And if beauty, softness and faith, in female forms, have their own influence, vices even, in slight degree, are thought to improve the expression. Malice and scorn add to beauty. You shall see eyes set too near, and limited faces, faces of the marked and invariable character. How the busy fancy inquires into their biography and relations! They pique, but must tire. Compared with universal faces, countenances of a general human type, which pique less, they look less safe. In such groups the observer does not think of heroes and sages. In the silentest meeting the eye reads the plain prose of life, timidity, caution, appetite, ignorance, old houses, musty savors, stationary, retrograde faculties pottering round (to use the country phrase) in paltry routines from January to December.

"These are the precincts of comedy and farce, and a taste for fun is all but universal in our species," etc.

N1874: Mr. Emerson dreaded having the company captured by laughter, so likely to be unbecoming and to pass into the unseemly or uproarious. He used to quote the speech of a wise relative to her daughter or niece: "My dear, beware you don't laugh, for then you show all your faults." The "bursts of Olympian laughter" of Carlyle required all his regard for him to make them tolerable, and in the essay on Social Aims in this volume appears the shock his taste suffered, when the low breeding of a man came to the surface in contemptible squeals of joy. This repugnance was so strong that, although Mr. Emerson took much pleasure in Hogg's ballad *The Witch of Fife*, he hated the lines:—

"But the auld man's laughe came on the gale
With a lang and a loud guffaw."

N1875: The neighborhood at the Saturday Club of Dr. Holmes and some other members was sometimes a little hard for Mr. Emerson to bear, much as he enjoyed them, because of his helplessness before their irresistible wit.

N1876: This suggests, in recent years, Kipling's neat version of the Venus Anadyomene for a perennial society beauty as the Venus Anno Domini.

N1877: At dinner parties in England Mr. Emerson seems to have had more than enough of stories and jokes, and this mood thus found expression in his journal just after crossing the Channel for his short visit to Paris:—

May 15, 1848. "The one thing odious to me now is joking. What can the brave and strong genius of C. himself avail? What can his praise, what can his blame avail me, when I know that if I fall or rise, there still awaits me the inevitable joke? The day's Englishman must have his joke, as duly as his bread. God grant me the noble companions whom I have left at home, who value merriment less, and virtues and powers more. If the English people have owed to their House of Commons this damnable derision, I think they have paid an overprice for their liberties and empire.

"But when I balance the attractions of good and evil, when I consider what facilities, what talents a little vice would furnish, there rise before me not these laughers, but the dear and comely forms of honour and genius and piety in my distant home, and they touch me with chaste palms moist and cold, and say to me, You are ours.

"Remember to be sober, and to be disposed to believe, for these are the nerves of wisdom."

QUOTATION AND ORIGINALITY

THIS ESSAY was read as the second lecture in a course given at Freeman Place Chapel in Boston in March, 1859, following "The Law of Success" and preceding "Clubs." Mr. Emerson seems to have made few changes in it.

N1878: From the *Phædrus*.

N1879: In this connection an anecdote of the time may not seem too irrelevant. Wendell Phillips had a very interesting lecture on the *Lost Arts*, but Mr. Emerson cautioned a young curator of the Concord Lyceum not to choose this lecture, for there was irony underlying this subject. It was meant for cowardly communities who could not face a brave word on the burning issues of their day and generation.

N1880:

In vain produced, all rays return;

Evil will bless, and ice will burn.

"Uriel," *Poems*.

N1881: "In Plato you explore modern Europe in its causes and seed,—all that in thought, which the history of Europe embodies or has yet to embody."—"Books," *Society and Solitude*.

In the chapter on Plato in *Representative Men*, p. 42, is a paragraph about his absorption of the wisdom of the ages gone before.

N1882: Albertus Magnus, a Suabian by birth, and a priest of the Dominican order, has been held to be the most learned man of the Middle Ages. He studied all subjects then known, and especially Aristotle and the Arabian writers.

Giovanni di Fidenza, a fervent mystic, canonized as St. Bonaventura for his gifts and virtues and remarkable services to the Church, was a priest of the order of St. Francis and is the patron saint of Lyons.

The great Schoolman, son of the Count of Aquino in Italy, later known as St. Thomas Aquinas, the Angelic Doctor, was a disciple of Albertus.

N1883: This passage followed in the lecture:—

"All reading is a kind of quotation, a resorting to other men's cisterns, and, if we sound to the bottom, we shall find these feeders of the mind to be not only private artificial pipes into every house, and fed by old mains constructed and kept in repair by nations, but these also are patched upon nature, and draw from rivers, and out of the great valleys of the world, which was built for a reservoir and aqueduct."

N1884: This tracing the great hymns and psalms of the ages to the religious "common sense" of mankind is expressed in "The Problem":—

Out from the heart of Nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below,—
The canticles of love and woe.

N1885: Philo, an Alexandrian Jew and Platonist, contemporary with Jesus, in his writings strove to show that the Mosaic revelation contained the germ of the Greek philosophy.

N1886: In the lecture the sentence was thus concluded: "whilst the Indian scriptures, when cleared by criticism of their Leviticus, and the sublime theology at the base purified of its incongruous adhesions, will stand on the same wonderful height of inspiration."

N1887: Marc Antoine René de Paulmy, 1722–87, one of the distinguished family of D'Argenson, abandoned diplomatic life for literary pursuits. He was a member of the Academy, and is especially noted for having collected and edited the *Bibliothèque universelle des romans*.

N1888: There is in Plutarch a chapter with this title: "Of the Word EI engraved over the Gate of Apollo's Temple at Delphi."—*Morals*, edition revised by Professor William W. Goodwin, vol. iv., p. 478.

N1889: This idea of the expression of one mind being raised to the second power by its happy application by another is perhaps extremely stated in *Representative Men* in the chapter on Plato: "The inventor only knows how to borrow; and society is glad to forget the innumerable laborers who ministered to this architect, and reserves all its gratitude for him."

N1890: The celebrated Swiss banker Jacques Necker, who, as Minister of Finance in France in a time of the greatest confusion and embarrassment, restored credit and introduced many wise economies and humane reforms. Meeting with some disfavor, he resigned, was recalled by Louis XVI. in 1788, dismissed the following year, but was reinstated in response to general public demand just before the outbreak of the Revolution. He did what he could to secure the recognition of the Third Estate, thus offending the nobility and clergy. Opposing the seizure of church property and the issue of *assignats*, he became unpopular even with the deputies of the people, resigned and returned to Geneva to end his days.

N1891: Müller, a Silesian by birth, did important work in archæology in the first half of the nineteenth century. His works on the history of the Hellenic races and states, and of Greek literature down to the time of Alexander, were translated into English.

N1892: Jean François Marmontel, a young man of varied talent, who came to Paris, attracted thither by Voltaire, with whom he had corresponded, was the author of poems and tragedies successful in their day, but is best known by his *Contes Moraux*.

N1893: "T is the fulness of man that runs over into objects, and makes his Bibles and Shakspeares and Homers so great. The joyful reader borrows of his own ideas to fill their faulty outline, and knows not that he borrows and gives."—"Success," *Society and Solitude*.

N1894: "The adventitious beauty of poetry may be felt in the greater delight which a verse gives in happy quotation than in the poem."—"Art," *Society and Solitude*,.

N1895: "By what he omits, show me the artist" was Schiller's way of putting the same thought.

N1896: Girolamo Tiraboschi (1731–94), a Jesuit priest, professor of Rhetoric at Modena, and author of *Storia della letteratura italiana*.

Joseph, Baron von Hammer-Purgstall (1774–1856), one of the best authorities upon Oriental history and literature.

In *English Traits*, p. 245, Mr. Emerson speaks with respect of Hallam, with whom he had agreeable meetings while in London.

N1897: Here followed in the lecture this paragraph:—

"We are to each other results. As our perception or sensibility is exalted, we see the genesis of another's action and thought. We see him in his debt and fountains: and, to our eye, instead of a little pond of life, his mind is a rivulet fed by rills from every plain and height in Nature (and antiquity), and deriving a remote origin from the summit of things."

N1898: The following stray fragment from the lecture may be here given:—

"A tree is a congeries of living vegetables: is a man a congeries of living spirits? One of them works to see what the other is doing. There is often mutiny in the troop."

N1899: The doctrine, as old as Heracleitus and perhaps older, constantly recurs in the essays, an instance of the new values which the quoter gives, who sees in it Evolution, a doctrine by no means unanimously admitted by men of Science when the lecture was written.

The sentences which follow remind one of its presentation in the second poem "Woodnotes":—

I, that to-day am a pine,
Yesterday was a bundle of grass.

And again:—

As the bee through the garden ranges,
From world to world the godhead changes;
.

This vault which glows immense with light
Is the inn where he lodges for a night.

Thou metest him by centuries,
And lo! he passes like the breeze.

N1900: In the lecture this sentence followed:

"God makes but one man of each kind; one leaf, one blade of grass, one meridian, does not resemble another."

N1901: "Memory is the mother of the Muses," in the lecture, is omitted here.

N1902: Compare the lines in the poem "Worship":—

More near than aught thou call'st thy own,
Yet, greeted in another's eyes,
Disconcerts with glad surprise.

N1903: Between these paragraphs may have stood this stray sheet:—

"The severe ideal rule is that a wise man will write nothing but that which is known only to himself, and that he will not produce his truth until it is imperatively demanded by the progress of the conversation, which has arrived at that point. Then is the shrine ready and the pedestal; he produces his statue, and it fills the eye."

N1904: Dr. Holmes, in several places in his *Life of Emerson*, has much that is interesting to say about his quotations, which he says "are like the miraculous draught of fishes;" and he has been at the pains to count the named references, chiefly to authors, and found them to be three thousand three hundred and ninety-three, relating to eight hundred and sixty-eight different individuals. He also gives a list of those to whom there are twenty or more references.

He also says that this essay "furnishes a key to Emerson's workshop. He believed in quotation, and borrowed from everybody and every book. Not in any stealthy or shamefaced way, but proudly, as a king borrows from one of his attendants the coin that bears his own image and superscription."

N1905: Here in the essay was the sentence, "'T is a great advantage to be first in time."

N1906: Thoreau's fine lines in his poem "Inspiration" here come to mind:—

"I hearing get, who had but ears,
And sight, who had but eyes before;
I moments live, who lived but years,
And truth discern, who knew but learning's lore."

PROGRESS OF CULTURE

ON THE last day of August, 1837, Mr. Emerson gave the Phi Beta Kappa Oration at Harvard College. He was then known as a young preacher of promise who had unaccountably withdrawn from a desirable pastorate in Boston and, after travel in Europe, was living the life of a scholar in a quiet village, whence in the winter he had come to Boston to read courses on Biography, English Literature and the Philosophy of History. The oration, "The American Scholar," was notable and well received, though his first book, *Nature*, published the year before, had attracted little attention. The young men were stirred, and a few months later the Senior Class in the Divinity School at Cambridge asked him to address them. His earnest words on that occasion, however well received by the young, were deemed subversive to true Christianity by many excellent professors and clergymen, and their duty prompted them to express the disapproval publicly and sound the note of alarm against a dangerous heretic. The University may be said to have officially disapproved of Emerson's teaching, although he had friendly relations with many of those connected with it. Thirty years passed, with events of great

importance in the national life, and in the literary and religious feeling of the people, but the College until the close of the Civil War showed outwardly little change; yet it has been said that many of Harvard's best soldiers had been moved by Emerson's written and spoken words.

On the 18th of July, 1867, Mr. Emerson, an elderly man, with reputation as a scholar and writer established, and seldom attacked, in England and America, again addressed the Phi Beta Kappa Society and their guests in the Unitarian Church opposite the College gates, which was then the place in which academic festivals were held. The occasion was a very pleasant one, to the orator as to the others, and a great company of people, all friendly, were there gathered.

By mischance Mr. Emerson had mislaid his glasses, which only then he had begun to require, so the reading did not prosper at first, but the genuine good will of the audience smoothed matters as far as was possible until some one lent him a pair, when the speaker at once redeemed the day by his best delivery of the later ascending portion of the oration.

If the address surprises the readers of to-day by its tone of secure hopefulness with regard to America's future, the conditions of that day should be recalled, as well as Mr. Emerson's faith in the great laws that work for good. The fierce conflagration in which years of smouldering discontent had culminated had destroyed the most evident evil, Slavery, and had cleared the moral atmosphere. The conscience of the Nation had asserted itself. Patriotism, however interpreted in different sections of the country, had been aroused. Courage, devotion and sacrifice had a new meaning. Poverty had brought its wholesome, if hated, schooling. Strong and unselfish men had come to the front in politics and in the army; good citizenship showed at its best. The corrupting and selfish influence

of wealth was at its lowest ebb. The depletion of the population by war made immigration most desirable, and the new complications and troubles incident to new conditions had hardly appeared.

N1907: Ovid, *Ars Amatoria*, III. 121.

N1908: It may not be easy for one who had not the mortification to live in times when fugitive slaves were seized in Boston, and after trial and sentence, guarded to the vessel that was to carry them back by the local militia and police; when her business men mobbed and maltreated Garrison, and broke up anti-slavery meetings, and when many of the club-men, and also of the scholars, sympathized with such doings,—to appreciate the relief that the change wrought by the war brought. Membership in the Union Club, founded during the war by the best citizens, was now courted and not despised.

N1909:

The Cossack eats Poland,
Like stolen fruit;
Her last noble is ruined,
Her last poet mute:
Straight, into double band
The victors divide;
Half for freedom strike and stand;—
The astonished Muse finds thousands at her side.

"Ode," inscribed to W. H. Channing, *Poems*.

N1910: Five years earlier Mr. Emerson wrote in his journal:—

"The world is full of pot and pan policy. Every nation is degraded by the hobgoblins it worships instead of the eternal Gods. Thus popery, thus Calvinism, thus tariff, thus mesmerism, thus custom, thus luxury, thus slavery;—and civility as it advances to the light sheds them, casts away these crusts for simple good sense and universal modes."

Now he wrote, on a sheet of notes marked "Appendix to Φ Β Κ":—

"Ours the age of Catholicity in literature; change of opinion in regard to Spinoza and Voltaire: age of recoveries in literature, the spelling of the Rosetta Stone and the faces of the pyramid; translation of the Vedas; printing of the Norse Sagas."

N1911: There is in the early part of the paper on Life and Letters in New England, in *Lectures and Biographical Sketches*, a passage on the necessary effect on religious teachings of the Copernican Astronomy, transferring the centre of importance of our system from the little Earth to the Sun.

The following passage was among the notes relating to the Phi Beta Kappa Address:—

"The moral sentiment never held to the Hebrew or the Ptolemaic or the Tycho Brahe astronomy, but was of an austere mathematic fabric, as the sun and the ether are."

N1912: The artistic effect of contrast between the first part of the address, dealing with material advantages, and the higher considerations which followed, was remarkable in the delivery. Mr. Emerson enumerated the inventions, the comforts, the conveniences at such length (many are omitted in the essay) and

in so uniform a tone of cheerful praise that some members of his family even began to be troubled at what he would have called "the catalogue style," and to feel that the oration was not to be up to the level of his usual writing. Suddenly he took the very thought in our minds, "We have had enough of these boastful recitals," and with great effect exclaimed, "Then I say, *Happy is the land* where benefits like this have grown trite and commonplace!" Then, in a tone quiet and low, but with great flexibility, he began the second part of the lecture and gradually worked up to his finest delivery in the concluding passages.

N1913: It is suggested in the poem-parable "Uriel" that possibly the disappearance of the archangel after his daring utterance may have been because he had

by knowledge grown too bright
To hit the nerve of feebler sight.

N1914: Viasa, or Vyasa, the author, or compiler, of the *Mahabharata*.

N1915: Compare the passage in "Aristocracy," *Lectures and Biographical Sketches*, on the claim a commanding talent gives to enter the superior class.

N1916: "Shall we then judge a country by the majority, or by the minority? By the minority, surely."—"Considerations by the Way," *Conduct of Life*.

N1917: The following notes very probably were for this lecture:—

"Natural History governs science, arts, architecture, religion, philosophy, poetry.

"What Adalbert de Beaumont has taught us of exhaustless fund of suggestion which Oriental art has drawn from nature.

"Every thought must be expressed by some object in nature, and 't is the fault of metaphysics that they endeavor to express themselves in words at as many removes from nature as possible. The poet catches the thought and sculpts it by discovering its true symbol in nature, and mankind accept his statement, and the philosopher is gladly forgotten."

The following stray sheet of manuscript bearing on the hidden relation of things may here be introduced:—

"Palmistry, phrenology, astrology rest on a real basis. 'T is certain that there is a relation between the stars and your wedding day; between the lines of your hand and the works done by it; between the activity of your brain and its outward figure;—there is a relation, though you may easily fail to find it. The world, the universe may be reeled off any idea, like a ball of yarn. See how the chemist, how the Christian, how the negro—each disposes of it with greatest ease after his own peculiar habit, and finds all the facts fit and confirm his view. And each science and law is, in like manner, prospective and fruitful. Astronomy is not yet astronomy, whilst it only counts the stars in the sky. It must come nearer, and be related to men and their life, and interpret the moral laws. In learning one thing you learn all. Egg and stratum go together. As the naturalist found that the order of changes in the form of the embryo in the egg from day to day determined the right procession of the fossil remains of species which had occupied the surface of the globe for geologic ages."

N1918: Oersted was the discoverer of electro-magnetism.

N1919: I quote from the admirable *Introduction à l'étude de la Figure Humaine*, by Dr. Paul Richer of Paris, the following passage with regard to this power of divination found in the great masters of science:—

"Ce que nous gagnons d'un côté en confort matériel, ne le perdons-nous pas de l'autre en art et poésie? Avec le règne de la machine, que devient le sentiment esthétique? [He then says that Art and Science have a common ground where they meet, and continues:] Chez le savant, par exemple, l'étude patiente et régulière des faits n'exclut point l'usage des facultés créatrices de l'esprit. Bien au contraire, cette étude ne saurait conduire à rien sans une certaine dose de l'intuition et, pour ainsi dire, de divination qui, dans un fait des plus vulgaires, fait entrevoir des merveilleuses conséquences. [He instances Newton and Galileo.] Et cependant avant ces grands hommes bien des gens avaient vu fruits tomber des branches, et des lampes se balancer au voutes des églises. Qu'avait-il donc manqué pour transformer ces faites vulgaires en grandes découvertes? Rien d'autre que cette faculté créatrice qui est le propre du génie, quel que soit le domaine où se manifeste son activité.

"Il ne faut pas confondre, en effet, la science que se crée et la science toute faite. Le raisonnement et la déduction supposent toujours un point de départ qui est une idée neuve."

N1920: "Nature is too thin a screen; the glory of the One breaks in everywhere."—"The Preacher," *Lectures and Biographical Sketches*.

N1921: There is much about the importance of sensibility, impressionability, in the latter portion of "Success," in *Society and Solitude*.

N1922: This suggests the image of

Little man, least of all,
Among the legs of his guardians tall,—

in the poem, "Experience," the motto to the essay of that name.

N1923:

A score of airy miles will smooth
Rough Monadnoc to a gem.

"Fragments on Nature," *Poems*, Appendix.

N1924: Horace, *Epistolæ*, book 1. 6.

N1925:

Night-dreams trace on Memory's wall
Shadows of the thoughts of day,
And thy fortunes, as they fall,
The bias of the will betray.

Quatrain, "Memory," *Poems*.

N1926: See the verses in the "Fragments on Life," in the Appendix to the *Poems*, beginning,—

Love
Asks nought his brother cannot give.

N1927: Professor Goodwin's rendering of this sentence from the "Consolation to Apollonius" in his edition of Plutarch's *Morals* is different:—

"It is an expression of Pindar that we are held to the dark bottom of hell by necessities as hard as iron."

N1928: The following passage comes from a sheet with notes marked by Mr. Emerson "Appendix to Φ B K":—

"As gravity, the material system; so truth holds the intellectual universe stanch.

"In every announcement of a natural law we hear the announcement of a law of the mind.

"True genius always purifies. Genius always on the side of morals.

"The moral law preserves its eternal newness and appears to every age new-born, almost abolishing memory by the splendor it lends to the passing hour."

PERSIAN POETRY

DR. WILLIAM T. Harris begins his essay entitled "Emerson's Orientalism"⁹⁴ by quoting from *Representative Men* Mr. Emerson's account of Plato, from the active, creative, advancing and freedom-loving West, becoming acquainted with the immovable, meditative, fatalistic East, and there imbibing the idea of one Deity, in which all things are absorbed. "In short, the balanced soul was born, perceptive of the two elements."

Dr. Harris then says: "What Emerson says of Plato we may easily and properly apply to himself. But he goes farther than Plato towards the Orient, and his pendulum swings farther west into the Occident. He delights in the all-absorbing unity of the Brahman, in the all-renouncing ethics of the Chinese and Persian, in the measureless images of the Arabian and Hindoo poets. But he is as practical as the extremest of his countrymen. His practical is married to his abstract tendency. It is the problem of evil that continually haunts him and leads him to search its solution in the Oriental unity, which is above all dualism of good and evil. It is

⁹⁴ *The Genius and Character of Emerson*, Lectures at the Concord School of Philosophy. Boston: James R. Osgood & Co., 1885.

his love of freedom which leads him to seek in the same source and elevation of thought above the trammels of finitude and complications. Finally, it is his love of beauty, which is the vision of freedom manifested in matter, that leads him to Oriental poetry, which sports with the finite elements of the world as though they were unsubstantial dreams."

In the summer of 1884, two years after Mr. Emerson's death, Protap Chunder Mozoomdar of Calcutta spoke at the School of Philosophy in Concord on Emerson as seen from India. What he said is printed in the volume just referred to. I quote the following passage: "Where the blue Narbudda, so still, so deep, so pure, flows through the high milk-white walls of the marble hills near Jubbulpoor, in the natural alcoves of the virgin rocks there are devotional inscriptions in Sanscrit. I wish Emerson had composed his essays on Nature there....Amidst this ceaseless, sleepless din and clash of Western Materialism, this heat of restless energy, the character of Emerson shines upon India serene as the evening star. He seems to some of us to have been a geographical mistake.... All our ancient religion is the utterance of the Infinite through Nature's symbolism."

The date of Mr. Emerson's first acquaintance with the poetry of the East cannot be exactly given. Some notes in his journals at about the time of his parting with his church show that he already was interested in the idealism of the *Mahabharata*, but probably only from extracts which he read in De Gerando's *Histoire comparée des systèmes de Philosophie*.

In his readings of Thomas Taylor's translations of Proclus he found the "Chaldean Oracles," attributed to Zoroaster, and he owned a very rare book, *The Desatir or Sacred Writings of the Ancient Persian Prophets*, printed in Bombay in 1818. Quotations from this appear in the *Dial*.

In his journal for 1841 occurs his first mention of Hafiz. "You defy anybody to have things as good as yours—Hafiz defies you to show him, or put him in a condition inopportune and ignoble. Take all you will and leave him but a corner of Nature, a lane, a den, a cow-shed, out of cities, far from letters and taste and culture, he promises to win to that scorned spot, the light of moon and stars, the love of men, the smile of beauty, the homage of art. It shall be painted and carved and sung and celebrated and visited by pilgrimage in all time to come."

This would seem to show that already the translation of Hafiz into German by Baron Von Hammer-Purgstall had come to Mr. Emerson's attention.

But what he learned of the poet Saadi seems to have more attracted him, at first, certainly, and the French or English version of the *Gulistan* naturally was easier to become familiar with. In the journal of 1843 he wrote,—

"In Saadi's *Gulistan* I find many traits which comport with the portrait I drew."

This must refer to the poem "Saadi," which was published in the *Dial* for October, 1842. It seems to imply that his knowledge of Saadi had come from some other source and that the *Gulistan* had only lately come into his hands. But Saadi and he continued close friends. He adopted the name to typify in his own verses the ideal poet, though, perhaps for metrical convenience, he often used the monosyllabic form Seyd or Said. This first occurs in the poem "Uriel." He had learned from Von Hammer that Saadi meant *felicity*, or *fortunate*, and thereafter in some journals passages are referred to in the index under the word Saadi which say nothing of the

Persian poet, but are about content, sweet temper and good hope.

For Saadi sat in the sun,
And thanks was his contrition.

Seeing the mistake of heated arguments in questions to which the still small voice would suggest the unanswerable answer to him who would listen, his word was

Let theist, atheist, pantheist,
Define and wrangle how they list,
Fierce conserver, fierce destroyer,—
But thou, joy-giver and enjoyer,
Unknowing war, unknowing crime,
Gentle Saadi, mind thy rhyme.

For

Saadi loved the race of men.

Many of the most pleasing fragments of Mr. Emerson's verse, gathered after his death into the Appendix to the *Poems*, introduce Saadi's name.

When an American edition of Gladwin's translation of the *Gulistan, or Rose-Garden* was printed,⁹⁵ Mr. Emerson, who probably suggested this plan to his friend Mr. James T. Fields, was asked by

⁹⁵ *The Gulistan, or Rose-Garden*, by Musle-Huddeen Sheik Saadi, translated from the original by Francis Gladwin with an Essay on Saadi's Life and Genius by James Roes and a Preface by R. W. Emerson, Boston: Ticknor & Fields, 1865.

him to write the preface. He did so, and that is why the essay in this volume does not dwell upon Saadi among the Persian poets.

Since Mr. Emerson cared so much for Saadi, yet for the reason just stated did not treat of him in this essay, it seems best to copy here some sentences from the note-books.

1843. "Saadi was long a Sacayi, or water-drawer, in the Holy Land, 'till found worthy of an introduction to the prophet Khizr, Elias or the Syrian and Greek Hermes, who moistened his mouth with the water of immortality.' Somebody doubted this and saw in a dream a host of angels descending with salvers of glory in their hands. On asking one of them for whom those were intended he answered, 'for Shaikh Saadi of Shiraz, who has written a stanza of Poetry that has met the approbation of God Almighty.' Khosraw of Delhi asked Khizr for a mouthful of this inspiring beverage; but he told him that Saadi had got the last of it.

"It was on the coming of Friday in the month Showal, of the Arabian year 690, that the eagle of the immaterial soul of Shaikh Saadi shook from his plumage the dust of his body."

Soon after Mr. Emerson had completed his threescore and ten years, a young clergyman in a Western State, whose growth had been helped by his writings, was troubled at an authoritative statement, which he had heard, that Emerson had been led by the preaching of a popular Orthodox divine in Boston to see the error of his ways and teachings, "had accepted Jesus as his Saviour, the Bible as inspired, and had formally joined the Church." Mr. Emerson smiled, but did not think it worth while to deny these assertions, yet allowed his son to answer the letter of inquiry as to whether he had suffered a late conversion. This sentence from Saadi, which he enjoyed, and quotes in *Representative Men*, would have been a simple and appropriate answer: "It was rumored abroad that I was penitent, but what had I to do with repentance?"

In his lecture on the Fugitive Slave Law, given in New York on March 7, 1854, Mr. Emerson quoted Saadi's saying, "Beware of hurting the orphan. When the orphan sets a-crying, the throne of the Almighty is rocked from side to side."

In the essay on Books, in *Society and Solitude*, after recommending certain autobiographies, Mr. Emerson says: "Another class of books closely allied to these, and of like interest, are those which may be called *Table-Talks*: of which the best are Saadi's *Gulistan*; Luther's *Table-Talk*; Aubrey's *Lives*; Spence's anecdotes," etc. This essay was published in the *Atlantic Monthly* for January, 1858.

Mr. Emerson included in his first book of poems, published early in 1847, two translations from Hafiz. He prefixed this note to them:—

"The poems of Hafiz are held by the Persians to be allegorical and mystical. His German editor, Von Hammer, remarks on the following poem, that, 'though in appearance anacreontic, it may be regarded as one of those compositions which earned for Hafiz the honorable title of "Tongue of the Secret."'"

In the note-book called "Orientalist" are the following passages, mostly transcribed from the journals during the forties:—

"Hafiz has only just arrived as a competitor to our occidental lyrists, as the Pasha of Egypt challenged so lately the English men of the turf, and our theologians left out till now the Bhagvat Geeta. [He is characterized by a perfect intellectual emancipation, which also he provokes in the reader. Journal, 1847.] Nothing stops him; he makes the dare-God and dare-devil experiment; he is not to be scared by a name or a religion; he fears nothing, he sees too far, and sees throughout. [Journal, 1847. Such is the only man

I wish to see and to be. The scholar's courage is as distinct as the soldier's and the statesman's, and a man who has it not cannot write for me.].

"Hafiz's skepticism is only that of a deep intellect: he pays homage to virtue. Wine stands poetically for all that it symbolizes, and not as in Moore's verse for Best Port.

"He who sees the horizon may securely say what he pleases of any tree or twig between him and it.

"He takes his life in his hand, and is ready for a new world. He is restless, inquisitive, thousand-eyed, insatiable and as like a nightingale intoxicated with his own music; never was the privilege of poetry more haughtily used.....

"Talk not to me of mosques or of dervishes; God is my witness, I am where he dwells.

"Hafiz does not write of wine and love in any mystical sense, further than that he uses wine as the symbol of intellectual freedom."

In the journal of 1846 is a translation of Hafiz, followed by this paragraph, called "The Noblest Chemistry":—

"Sunshine from cucumbers. Here was a man who has occupied himself in a noble chemistry of extracting honor from scamps, temperance from sots, energy from beggars, justice from thieves, benevolence from misers. He knew there was sunshine under those moping churlish brows, elegance of manners hidden in the peasant, heart-warming expansion, grand surprises of sentiment in these unchallenged, uncultivated men, and he persevered against all repulses until he drew it forth: now his orphans are educated, his boors are polished, his palaces built, his pictures, statues, conservatories, chapels adorn them; he stands there prince among his peers, prince among princes,—the sunshine is out, all flowing abroad over the world."

In the same journal is written:—

"Hafiz, whom I at first thought a cross of Anacreon and Horace, I find now to have the best blood of Pindar also in his verses." (He added later in pencil, "also of Burns:").

N1929: Mr. Emerson notes in his journal of 1847: "Joseph Von Hammer,⁹⁶ born 1774, published in 1813 *Divan of Hafiz*; in 1818 *History of Persian Belles-Letters*; in 1823 *Motenebbi from the Arabic*; in 1825 the *Baki from the Turkish*."

N1930: For an instance of the intoxication of flowers, the experience of Saadi given in *Representative Men* might be cited, where Mr. Emerson, expressing his discontent that Swedenborg's visions have so funeral a character and are devoid of beauty, says, "Was he like Saadi, who, in his vision, designed to fill his lap with the celestial flowers, as presents for his friends; but the fragrance of the roses so intoxicated him that the skirt dropped from his hands?"

N1931: In the "Fragments on The Poet" in the Appendix to the *Poems* it is said of him, under the name of Saadi,—

The birds brought auguries on their wings,
And carolled undeceiving things
Him to beckon, him to warn;
Well might then the poet scorn
To learn of scribe or courier
Things writ in vaster character.

⁹⁶ In 1837 he was created Baron Purgstall; he died in 1856.

Also, in the verses called "The Miracle" (Appendix), the wren tells what is in the poet's mind.

N1932: Mr. Emerson gives no translation of Firdusi. In his journal is this sentence about him, quoted from the *Causeries* of Sainte-Beuve: "*Firdusi n'a pas besoin d'avoir lu Horace ni Ovide pour dire les mêmes choses qu'eux.*"

Matthew Arnold drew the subject of his *Sohrab and Rustum* from Firdusi's poem, the *Shah Nameh*, of enormous length, chronicling the glories of the Persian and Iranian kings and heroes.

N1933: In his preface to the *Gulistan*, Mr. Emerson tells more of the legends of Karun.

N1934: This sentence suggests some verses in Mr. Emerson's note-book, apparently translations from Hafiz:—

On a raisin stone
The wheels of Nature turn,
Out of it the fury comes
Wherewith the spondyls burn.
And because a drop of wine
Is creation's heart,
Wash with wine those eyes of thine,—
Nothing is hid, nor whole, nor part.

The motto of the essay "Beauty," printed in the *Poems*, has Seyd for its hero. In it occur these lines:—

In dens of passion, and pits of woe,
He saw strong Eros struggling through,

To sun the dark and solve the curse,
And beam to the bounds of the universe.

N1935: In the journal for 1847 this passage occurs in a form less general than in the text:—

"'Loose the knots of the heart,' says Hafiz....Expression is all we want: not knowledge, but vent: we know enough; but have not leaves and lungs enough for a healthy perspiration and growth. Hafiz has: Hafiz's good things, like those of all good poets, are the cheap blessings of water, air and fire; the observations, analogies and felicities which arise so profusely in writing a letter to a friend. An air of sterility, poor, thin, arid, reluctant vegetation, belongs to the wise and the unwise whom I know. If they have fine traits, admirable properties, they have a palsied side; but an utterance whole, generous, sustained, equal, graduated at will, such as Montaigne, such as Beaumont and Fletcher so easily and habitually attain, I miss in myself most of all, but also in my contemporaries. A palace style of manners and conversation to which every morrow is a new day, which exists extempore, and is equal to the needs of life, at once tender and bold and with great arteries like Cleopatra and Corinne, would be satisfying, and we should be willing to die when our time came, having had our swing and gratification. But my fine souls are cautious and canny and wish to unite Corinth with Connecticut."

N1936: Mr. Emerson felt no responsibility for the morals of this remote Oriental Pindar, so could enjoy his sweetness and freedom the more. Time, space, race, allowance due to poetic flight and to the hyperbole of the Orient, made a purple atmosphere clothing the poet. But, had an American Hafiz sung at his door, while he would have been kind and hospitable, the virtue and temperance in thought and act of his ancestors, bred in him, would have

recoiled from the superlative and the reckless, not essential to beauty. Thus he welcomed Whitman's free and New World singing (rather, however, in its promise than in its result), but, as that author has told us, and with pride that he did not yield to the friendly urgency, did his best to persuade him to keep his work always within the decencies.

At first the Oriental compliment carried to the limits of exaggeration, and the high color of the imagery, were a little hard for the New Englander to bear. Here is a note:—

"'T is with difficulty that we wont ourselves in the language of the Eastern poets and their melodramatic life. When we go down to Long Wharf we do not find an ivory boat and a pink sea."

N1937: Mr. Emerson had, of course, when he wrote of the Persians, only Von Hammer's translations to work on. The Germans had no way of rendering the sound of *J* but by the clumsy *dsch*, so he usually spelled Jami, as in the poem "Saadi," Dschami.

N1938: Two translations not rhymed are added from the note-books:—

"Drink, hear my counsel, my son, that the world fret thee not.
Tho' the heart bleed, let thy lips laugh like the wine-cup.
Is thy soul hurt, yet dance with the viol-strings:
Thou learnest no secret, until thou knowest friendship,
Since to the unsound no heavenly knowledge comes in."

"Ruler after word and thought
Which no eye yet saw,
Which no ear yet heard,

Remain, until thy young destiny
From the old greybeard of the sky
His blue coat takes."

INSPIRATION

IN THE first course of lectures on *The Natural History of the Intellect*, given by Mr. Emerson at Harvard University in 1870, was one on Inspiration. This probably contained much of the matter in the present essay, which, with the omission of a few sheets, is the lecture as delivered before the Peabody Institute in Baltimore in January, 1872.

N1939: See the note on this expression of Hunter's where it is used early in this volume, in the introductory part of the essay "Poetry and Imagination."

N1940: In "Natural History of Intellect," in the volume of that name, it is said that "Inspiration is the continuation of the divine effort that built the man." The essay "Nature" in the first volume tells of the instruction of man's soul by the Symbolism of all that his eye sees.

N1941: Mr. Emerson wrote in one of the journals, "When a god wishes to ride, any stick or straw will serve him for a horse," apparently from Pindar's verse:—

Θεοῦ θέλοντος κἄν ἐπὶ ῥιπὸς πλέοις,

quoted by Plutarch and rendered by the early translator—

"Were it the will of Heaven, an osier bough
Were vessel safe enough the seas to plough."

N1942: In several places in his writings Mr. Emerson speaks of thoughts, or of God, entering the mind by passages which the individual never left open.

N1943:

"Day and night their turn observe,
But the day of day may swerve,
Is there warrant that the waves
Of thought in their mysterious caves
Will heap in me their highest tide,
In me therewith beatified?
Unsure the ebb and flood of thought,
The moon comes back,—the Spirit not."

"The Poet," *Poems*, Appendix.

N1944: From a stray manuscript sheet:—

"Fluxional quantities. Fluxions, I believe, treat of flowing numbers, as, for example, the path through space of a point on the rim of a cart-wheel.

Flowing or varying. Most of my values are very variable. My estimate of America, which sometimes runs very low, sometimes to ideal prophetic proportions. My estimate of my own mental means and resources is all or nothing: in happy hours, life looking infinitely rich; and sterile at others. My value of my club is as elastic as steam or gunpowder, so great now, so little anon. Literature looks now all-sufficient, but in high and happy conversation, it shrinks away to poor experimenting."

N1945: From the *Phædrus*.

N1946: Zertusht is another name for Zoroaster.

N1947: The essay "Eloquence," in *Society and Solitude*, opens with a statement of the difference in capacity of heat in men of different temperaments. Mr. Emerson often mentioned in his journals his own lack in this respect and in animal spirits, though he found compensations. His "beds of ignited anthracite," which he speaks of as necessary for transcendent eloquence, lay very deep. But he had a sun-heat about him more powerful than he knew, the heat which comes from sincerity that he speaks of in the essay on Eloquence in this volume.

N1948: The poet here spoken of was probably Jones Very.

N1949: "Not every Day fit for Verse," Robert Herrick.

N1950: In Dryden's *Absalom and Achitophel* are lines resembling these:—

"Great wits are sure to madness near allied,
And thin partitions do their bounds divide."

N1951: On a stray sheet of the lecture these words here followed: "Law of that! to know the law of that, and to live in it! O thought too wild! O hope too good!...."

"Power, new power is the good which the soul seeks. No matter if it be not yet formed into a talent. New power suggests vast hopes, native to the mind: sets it on experimenting; brings it into creative moods."

N1952: The first verse of the poem "Waldeinsamkeit" (Forest-Solitude) tells what his daily walks in the woods were to Emerson, but the "wandering by the sea" in the second line preserves the memory that the poem was written at the beautiful island of Naushon.

N1953: This poem is by William Allingham, and called "Morning."

N1954:

The tongue is prone to lose the way,
Not so the pen, for in a letter
We have not better things to say,
But surely say them better.

"Fragments on Life," *Poems*, Appendix.

N1955:

And I who cower, mean and small
In the frequent interval
When wisdom not with me resides,
Worship Toil's wisdom that abides.

"Fragments on The Poet," *Poems*, Appendix.

The following is from a stray sheet of the lecture:—

"Sea-tides indeed! there are undulations of power, and the ebb and the flow of heavenly waters. I wish to predict these, and not waste time in attempting work which the soul to-day refuses."

There is in "May-Day" a passage telling of the happy renewal of joy and hope in age when Spring returns, beginning,—

'T was the vintage-day of field and wood.

N1956: From Zoroaster.

N1957: This is probably a quotation from the journal of Miss Mary Moody Emerson, an account of whom is given in *Lectures and Biographical Sketches*.

N1958: In the last pages of the essay on Behavior, in *Conduct of Life*, is an appeal to every one to respect the sanctity of a new morning and not to cloud it with complaints and cares.

N1959:

"By all means use sometimes to be alone;
Salute thyself, see what thy soul doth wear;
Dare to look in thy chest, for 't is thine own,
And tumble up and down what thou find'st there.
Who cannot rest till he good fellows find,
He breaks up house, turns out of doors his mind."

George Herbert, "The Church Porch."

N1960: In the poems, "My Garden," *Waldeinsamkeit*, "April" and "The Walk," Mr. Emerson hints at these oracles which the rightly attuned ear may catch.

N1961: These lines are probably Mr. Emerson's own.

N1962: Mr. Emerson cared little for music, but the Æolian harp made by his brother-in-law, Dr. Jackson, gave him constant delight. He placed it in his western window and let the wind sing to him to the accompaniment of his harp and the pines behind his study. In the first form of his poem "May-Day" he introduced a long passage about the harp, which he later printed as a separate poem. This, and another called "Maiden Speech of the Æolian Harp," which accompanied the gift of one to his daughter and her husband, are found in the *Poems*.

He loved to watch and wake
When the wing of the south-wind whipt the lake
And the glassy surface in ripples brake
And fled in pretty frowns away
Like the flitting boreal lights,
Rippling roses in northern nights,
Or like the thrill of Æolian strings
In which the sudden wind-god rings.

"Fragments on The Poet," *Poems*, Appendix.

N1963: In the journal for 1846 is an unrhymed rendering by Mr. Emerson of the poem of Hafiz here quoted:—

"Come, let us strew roses
And pour wine in the cup,

Break up the roof of heaven
And throw it into new forms.

So soon the army of cares
Shed the blood of the true
So will I with the cup-bearer
Shatter the building of woe.

We will rose-water
In wine-cups pour,
And sugar in the censer
Full of musk-scent throw.

Thy harping is lovely,
O play sweet airs,
That we may sing songs
And shake our heads.

Bring, East-wind, the dust of the body
To that great lord,
That we also may cast our eyes
On his beauty."

N1964: Mr. Emerson was very easily benumbed with cold, though of hardy habits. It was one reason why he avoided private hospitalities when on his lecturing journeys. He could not risk the deadly cold of the "spare-bed-room." When he came into a hotel in winter he would say to the landlord, "Now can you make me red-hot?"

N1965: Mr. Emerson held closely to his task and did not easily excuse himself. In writing to John Sterling in 1843 he said, "I think it a false standard to estimate health, as the world does, by some fat man, instead of by our power to do our work. If I should lie by whenever people tell me I grow thin and puny, I should lose all my best days."

N1966: "Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences which contain glimpses of truth, to digested systems which have no one valuable suggestion."—"Nature."

"Every scholar, writer, speaker has his own aids to intellect to which he resorts in time of need. When you cannot flog the mind into activity in your library, you go to your best companion and unfold your pack to him as you could not to yourself: great are the uses of conversation."—Sheet from the lecture.

N1967: "Poetry must be affirmative. It is the piety of the intellect. 'Thus saith the Lord,' should begin the song."—"Poetry and Imagination."

The following passage perhaps belonged here in the lecture:—

"Then for sensibility, I must add, that the great happiness of some of the best moments of life has been the enjoyment of books and works of art and science. And, as Marcus Antoninus said, 'What matters it who found the truth, whether thyself or another, and where had been thy own intellect, if greater had not lived?' And, though I hate to be in any manner wanting to the claims of stern and manly Intellect, I must say, that the delight in the superior powers of others is one of the best gifts of God."

N1968: "The perfection of writing is when mind and body are both in key, when the mind finds perfect obedience in the body. And wine, no doubt, and all fine food, as of delicate fruits, furnish some elemental wisdom: and the fire, too, as it burns in the chimney; for I fancy that my logs, which have grown so long in sun and wind by Walden, are a kind of Muses. A Greek epigram out of the Anthology," etc.—Sheet from the lecture.

N1969: In the address at Dartmouth College, in 1838, Mr. Emerson, expressing his gratitude for "these glorious manifestations of the mind," said, "I will thank my great brothers so truly for the admonition of their being as to endeavor also to be just and brave, to aspire and to speak. Plotinus too and Spinoza and the immortal bards of philosophy,—that which they have written out with patient courage makes me bold. No more will I dismiss with haste the visions which flash and sparkle across my sky, but observe them, approach them, domesticate them, brood on them, and draw out of the past genuine life for the present hour."

N1970: Wordsworth, "Excursion," book IV.

GREATNESS

THIS ESSAY is drawn largely from the concluding lecture of a course given at the Meionaon in Boston in the autumn of 1868. "Greatness" is a heading which occurs through the journals from 1840 onward, but of course the thoughts on this subject were drawn upon for many lectures that had not the name.

In July, 1872, Mr. Emerson spoke at Amherst College on the Greatness of the Scholar, and probably somewhat earlier at Middlebury College, Vermont, on the same theme. The essays on The Scholar, The Man of Letters, Aristocracy and Manners very probably have matter drawn from the lectures on Greatness, and that here given is only a portion of the lecture as delivered.

N1971: "The moment a great man fails us as a cause, it is only to become more valuable and suggestive as an effect."

N1972: Journal, 1857: "Every great man does in all his nature point at and imply the well-being of all the institutions and orders of the state. He is by inclination (though it may be far remote in position) the defender of the grammar-schools, the almshouse,

the Sabbath, the priest, the judge, the legislator and the executive arm. Throughout his being he is loyal."

N1973: The following passage in the lecture is here omitted:—

"The main question of any person whatever is, 'Does he respect himself?' Then I have no option. The universe will respect him. Greatness requires self-respect and it must be constitutional, indicating natural courage."

The sentence which follows in the text suggests the stoic attitude of his friend Thoreau.

N1974: In the lecture this sentence and quotation followed: "Thus self-respect is ever refining, ever retreating to an inward and higher self.

"O what is Honor? 'T is the finest sense
Of justice that the human mind can frame,
Intent each lurking frailty to disclaim
And guard the way of life from all offence
Suffered or done."

—Wordsworth.

N1975: Mr. Emerson's journals were mainly records of the oracles which came to his listening ear in his wood walks, and thoughts which the events and conversation of the day had suggested, but the outward circumstances usually have to be inferred.

N1976: These were the words of Miss Mary Rotch of New Bedford, and they made deep impression on Mr. Emerson, when in 1834 he was invited to preach for a time in that city. His cousin,

the Rev. David Greene Haskins, relates in his little book, before referred to, that when Mr. Emerson praised Swedenborg's writings to him he asked whether he was a Swedenborgian. This Mr. Emerson would not fully allow. "On my asking him how, then, he would define his position, he answered, and with greater deliberateness and longer pauses between his words than usual, 'I am more of a Quaker than anything else. I believe in the "still small voice" and that voice is Christ within us.'" This was probably in the year 1839.

N1977: In the last pages of the essay on New England Reformers, in the second volume of *Essays*, Mr. Emerson wrote of "the Law alive and beautiful which works over our heads and under our feet... 'Work,' it saith to man, 'in every hour, paid or unpaid, see only that thou work, and thou canst not escape the reward: whether thy work be fine or coarse, planting corn or writing epics, so only it be honest work, done to thine own approbation, it shall earn a reward to the senses as well as to the thought: no matter how often defeated, you are born to victory. The reward of a thing well done, is to have done it.'"

N1978: Journal: "Do you, as wise man, while some play at chess, some at cards, and some at the stock exchange—do you play at Cause and Effect?"

N1979: This sentence followed in the lecture: "The man whom we have not seen is the rapt lover in whom no regards of self degraded the adorer of the laws."

The paragraph in the text is treated more fully in "Aristocracy," in *Lectures and Biographical Sketches*.

The following is from the lecture sheets:—

"The persons generally most praised and esteemed are not those whom I most value; for the world is not receptive or intelligent of Being, but of Intellect. But heroes are they who value being. Being cannot be told, but is left alone, not only because little appreciated, but that its influence is silent and quiet. The world is awed before the great and is subdued without knowing why."

N1980: "Whenever Heaven sends a great man into the world, it whispers the secret to one or two confidants."—Lecture sheets.

N1981: When it is remembered that the Self-Reliance which Mr. Emerson taught is on the sublimated self, the individual giving passage to the universal Soul, it is seen that both positions, the haughty courage of the hero and the renunciation of all choice by the saint, are one. Each loses himself to save himself.

N1982: This sentence followed in the lecture: "Does any one say, Who cares for these conceited minorities?—the study of greatness! of the masters! the great are exceptional. Yes, but every man is exceptional."

N1983: This passage appears somewhat differently in the journal of 1864:—

"The *Spectator* says of the three obituary notices of Thackeray by Dickens, Trollope and Kingsley, only Dickens's is equal to the subject; the others strain to write up, and fail. It was said lately of Goethe's correspondence with the Duke of Weimar that the Duke's letters are the best. The experience is familiar day by day, that of two persons, one of character and one of intellect, character will rule and intellect must bow.

It is interesting in Goethe's case because of his patronizing tone to all the world."

N1984: Here, perhaps, belongs a sheet from the lecture: "The first fact is the long hidden one, that the world is as we are. If we bring to it a sound body and mind, it is full of joy and power, and is plastic like wax in our hands; if we come to it morbid and vicious, it torments and tyrannizes over us."

N1985: The human and hopeful feeling towards mankind appears here:—

"I wish such statements only as are friendly and respectful to every man. Every law, custom, revolution is agreeable to me which treats him kindly and considerately. I wish him magnified. Let ages and nations look to their own. Every age has its object and symbol. So has every man. Why not then every epoch of our life its own; and a man should journey thro' his own Zodiac of signs. I wish the days to be great."

The following sheets, which once did duty in the lecture "Success," may be added here:—

"For events are, not as the brute circumstance that falls, but as the life which they fall upon. The atoms of matter are plastic enough, for they are of us and we of them, and carbon and azote, mountain and planet, play one tune with man and mind.

"Why we can reach so far to the planets and sun with our short arms, is because we have a pocket edition of the whole. Your brain is timed with the sea-tide, has agreements with the sun.

"Understanding and love are the powers of a reasonable creature; and the last exists to be communicated; and is the only thing that is really in

our power to bestow; and is moreover the noblest good that can be given; and deserves the greatest retribution that can be made. And our principal care must be to confer it wisely or well,—to confer it only on that which deserves it all, and can repay it. We thought we were equals of Jove, when we learned to be Stoics; but here is a new greatness. The passages of affection in life are an enlargement once for all. Nobility lies under it. It is an exchange of nobleness. We are easily great with our friend. In unlocking to us another heart and mind, it unlocks our own heart and mind in a wonderful manner.”

IMMORTALITY

THE BASIS of this essay is a lecture given by Mr. Emerson before the Parker Fraternity in the Music Hall in Boston, December 29, 1861. Possibly it may have been read also in one of the University courses at Cambridge in 1870 or 1871. The manuscript he gave away, and no loose sheets—the miscellany which usually accompany the lecture—remain.

In the Introductory Note to this volume Mr. Cabot, explaining the part which he took in helping Mr. Emerson in the preparation of the book, says that Mr. Emerson looked through his journals for suitable material to add to the lectures before printing them, and "In this way it happened sometimes that writing of very different dates was brought together: e. g., the essay on Immortality, which has been cited as showing what were his latest opinions on that subject, contains passages written fifty years apart from each other."

But Mr. Emerson, although he felt at the time hardly equal to the ordering this material, approved its use, and the whole paper had his sanction when published. He had left traditional revelation to prove

That man in the bush with God may meet,
and found that the voice of the Holy Spirit

Still whispers in the morning wind.

In the stars, in the forest, in men and women, he had seen that everywhere, however hidden, the laws of Beauty, Wisdom, Goodness were working, and that the three were One. His belief in the Universal Mind, the Over-Soul, of which we were the vessels, or rather channels, if we but kept ourselves open, was satisfying. He did not care to ask questions of detail.

"Men ask concerning the immortality of the soul, the employments of heaven, the state of the sinner, and so forth. They even dream that Jesus has left replies to precisely these interrogatories. Never a moment did that sublime spirit speak in their *patois*. To truth, justice, love, the attributes of the soul, the idea of immutableness is essentially associated. Jesus, living in these moral sentiments, heedless of sensual fortunes, heeding only the manifestations of these, never made the separation of the idea of duration from the essence of these attributes, nor uttered a syllable concerning the duration of the soul.... In the flowing of love, in the adoration of humility, there is no question of continuance. No inspired man ever asks this question or condescends to these evidences. For the soul is true to itself, and the man in whom it is shed abroad cannot wander from the present, which is infinite, to a future which would be finite."—"The Over-Soul," *Essays, First Series*.

"The secret of heaven is kept from age to age. No imprudent, no sociable angel ever dropt an early syllable to answer the longings of saints, the fears of mortals. We should have listened on our knees to any favorite, who, by stricter obedience, had

brought his thoughts into parallelism with the celestial currents and could hint to human ears the scenery and circumstance of the newly parted soul. But it is certain that it must tally with what is best in nature. It must not be inferior in tone to the already known works of the artist who sculptures the globes of the firmament and writes the moral law. It must be fresher than rainbows, stabler than mountains, agreeing with flowers, with tides and the rising and setting of autumnal stars. Melodious poets shall be hoarse as street ballads when once the penetrating key-note of nature and spirit is sounded,—the earth-beat, sea-beat, heart-beat, which makes the tune to which the sun rolls, and the globule of blood, and the sap of trees.”—*Representative Men*, “Swedenborg.”

And in the last pages of the essay on Worship, in *Conduct of Life*, he said:—

“The whole revelation that is vouchsafed us is the gentle trust, which, in our experience, we find will cover also with flowers the slopes of this chasm.

“Of immortality, the soul when well employed is incurious. It is so well, that it is sure it will be well....Immortality will come to such as are fit for it, and he who would be a great soul in future, must be a great soul now.”

N1986: This story is found in Bede's *Ecclesiastical History*, chapter xiii., Bohn's Antiquarian Library.

N1987: In a Romaic song, “The Grave of Dunos,” a dying Klephtic chief says:—

“Now the death hour comes and this day will I die.
O make my grave and make it a broad and a high one,
In which I could stand up to fight and load my gun in the middle;

And on the right side leave for me a little window open,
At which the swallows may fly in to tell me when the Spring comes,
And where, in fair May moons, the nightingales may sing."

"Romaic and Rhine Ballads," *Dial*, October, 1842.

N1988: In an early journal (1830) Mr. Emerson wrote of his first wife: "Ellen Tucker wondered whether the spirits in Heaven look onward to their immortality, as we on Earth, or are absorbed in the present moment." In the same he wrote: "Every man contemplates an angel in his future self."

N1989: Mr. Emerson one Monday morning in 1837 wrote, with a sad humor:—

"The Pagan theology of our churches treats Heaven as an inevitable evil, which, as there is no help against, the best way is to put the best face on the matter we can. 'From whence,' said the good preacher yesterday in his prayer, 'we shall not be able to return.' Truth will out."

N1990: Mr. Emerson, in his journal, says that Goethe did so.

N1991: Beaumont and Fletcher, *The Double Marriage*.

N1992: Montesquieu, *Pensées Diverses*, p. 233.

N1993: At this distance of time there seems no impropriety in giving the names of these friends, of whom the story is told—Lewis Cass and Albert H. Tracy.

N1994: This passage on Divine Will comes from the sheets of the lecture on Courage:—

"I know not whether there be, as is alleged, in the upper region of our atmosphere a permanent westerly current, which carries all with it which rises to that height, but I know that when souls reach a certain height of perception, they accept a knowledge and principle above all selfishness. Whether there be an upper westerly current I know not; but I know a breath of Will blows through the Universe of souls eternally, in the direction of the Right and Necessary. It is the air which all intellects inhale and exhale, and it is the wind which blows all the worlds into order and orbit."

N1995: The lines ending the poem "Threnody" are here suggested.

N1996: Perhaps this passage was written after Mr. Emerson had the pleasure of riding under the vast pines of the Sierra Nevada, and standing at the feet of the giant redwoods of Mariposa when his good friend John Murray Forbes carried him thither for rest, after the strain of his University lectures in 1871.

N1997: In my youth I received this answer from my father, indirect yet none the less satisfying, when I asked him what he thought about a future life: "We may be certain that, whatever it may be, no one will be disappointed."

N1998: His poem the "Forerunners" tells of the "happy guides" whom he ever followed, but could not overtake.

N1999: This is a favorite quotation from Plato's *Phædrus*, about the soul which has perceived a truth.

Of ancient art Mr. Emerson said, "I find no trace of age in it."

Among Byron's poems Mr. Emerson valued especially that one beginning,—

"When coldness wraps this suffering clay,
Ah, whither strays the immortal mind?"

and used to repeat the lines:—

"Eternal, boundless, undecayed,
A thought unseen, but seeing all,
All, all on earth, or skies displayed,
Shall it survey shall it recall:
Each fainter trace that memory holds
So darkly of departed years
At one broad glance the soul beholds,
And all that was at once appears."

N2000: Compare in the "Fragments on The Poet," in the *Poems*, the lines beginning,—

For thought, and not praise.

N2001: The editor would gladly learn the source whence these lines are quoted, for which he and his friends have sought in vain.

N2002: That life is a series of *Nows*, and the day divine, was a favorite thought: "The whole fact is here or nowhere."

N2003: Mr. Emerson in answer to his revered friend, Rev. Henry Ware, who, troubled at the Divinity School Address, wrote to him

about his grounds of belief,—“I do not know what arguments mean in reference to any expression of a thought.”

N2004: Mr. Emerson said in conversation with a young friend, “The soul feels that it is in communication with the soul of things—and the soul knows.”

N2005: Speaking of the soul, in his security that what was best must occur, Mr. Emerson is reported to have said to Margaret Fuller, “Careful of health, careless of life, should be our motto.”

N2006: I quote from Mr. John Albee’s *Remembrances of Emerson* this just remark: “Emerson refused to dogmatize about what is necessarily obscure at present. So some thought the obscurity lay in him.”

In conclusion I quote this pleasant passage from *A Western Journey with Emerson*,⁹⁷ written by his friend the late Professor James Bradley Thayer of the Harvard Law School:—

“‘How *can* Mr. Emerson,’ said one of the younger members of the party to me that day, ‘be so agreeable, all the time, without getting tired!’ It was the *naive* expression of what we all had felt. There was never a more agreeable travelling-companion; he was always accessible, cheerful, sympathetic, considerate, tolerant; and there was always that same respectful interest in those with whom he talked, even the humblest, which raised them in their own estimation. One thing particularly impressed me,—the sense that he seemed to have of a certain great amplitude of time and leisure. It was the behaviour of one who really *believed* in an immortal life, and had adjusted his conduct accordingly; so that, beautiful and grand as the

⁹⁷ Boston: Little, Brown & Co. 1884.

natural objects were among which our journey lay, they were matched by the sweet elevation of character and the spiritual charm of our gracious friend. Years afterwards, on that memorable day of his funeral at Concord, I found that a sentence from his own essay on Immortality haunted my mind and kept repeating itself all the day long; it seemed to point to the sources of his power: 'Meantime the true disciples saw, through the letter, the doctrine of eternity, which dissolved the poor corpse and Nature also, and gave grandeur to the passing hour.'

"He was flooded and full to overflowing all through his life with a sense of the presence, the omnipresence and the instant operation of what he called 'the Over-Soul.' His apprehension and acceptance of this was no merely intellectual matter; it was something that penetrated into the substance of his being, and moved him like a vital force; it was this with its related beliefs that gave such power to his speech and such charm to his character, as of one who had already entered upon the immortal life, so that those who knew him intimately seemed to perceive what it was that the phrase of Scripture meant, when it said of the Almighty that he 'inhabited eternity.'

"The truth that he saw, the powerful impulse that he felt, the inflaming inspiration that moved him were not the sort of things that the man of letters ordinarily has to handle, and they induced methods very different from the common. These things were difficult to grasp; only to be reached in rare moments; not to be adequately shadowed forth, unless when the mood was on. These high and delicate matters were to be set down when he saw them and as he saw them; they must be communicated, if indeed he might hope to communicate them, by picture, by symbol, by some far-darting gleam of imaginative phrase."

POEMS

POEMS

GOOD-BYE. Not without serious consideration has the editor removed the poem, which his father put at the beginning of his first volume of verse, to a later place. But he has always shared the feeling of regret that Dr. Holmes expressed in his book, that "Emerson saw fit to imitate the Egyptians by placing the Sphinx at the entrance of his temple of song." In the mythology the Sphinx let no man pass who could not solve her riddle; and Emerson's Sphinx has no doubt cut off, in the very portal, readers who would have found good and joyful words for themselves, had not her riddle been beyond their powers.

There is some reason, from a list in the manuscript book in which are found most of the early poems, to think that the author once planned to put "Good-bye" first. It is the earliest of the poems published by him.

Mr. Emerson sent these verses in February, 1839, to his friend Rev. James Freeman Clarke, at his request, to print in *The Western Messenger*. Mr. Clarke then lived in Louisville, Kentucky. Mr. Emerson wrote: "They were written sixteen years ago, when I kept school in Boston, and lived in a corner of Roxbury called

Canterbury. They have a slight misanthropy, a shade deeper than belongs to me; and as it seems nowadays I am a philosopher and am grown to have opinions, I think they must have an apologetic date, though I well know that poetry that needs a date is no poetry, and so you will wiselier suppress them. I heartily wish I had any verses which with a clear mind I could send you in lieu of these juvenilities. It is strange, seeing the delight we take in verses, that we can so seldom write them, and so are not ashamed to lay up old ones, say sixteen years, instead of improvising them as freely as the wind blows, whenever we and our brothers are attuned to music. I have heard of a citizen who made an annual joke. I believe I have in April or May an annual poetic *conatus* rather than *afflatus*, experimenting to the length of thirty lines or so, if I may judge from the dates of the rhythmical scraps I detect among my MSS. I look upon this incontinence as merely the redundancy of a susceptibility to poetry which makes all the bards my daily treasures, and I can well run the risk of being ridiculous once a year for the benefit of happy reading all the other days."

Mr. Emerson did not include "Good-bye" in the *Selected Poems*, published in 1876, but it has won its way with readers, and while this boyish utterance does not refer to his retirement to the country twelve years later, to study God in Nature, it seems a prophecy, though written in a different mood. The shy youth of nineteen, assistant in his brother William's school for young ladies in Boston, when the day's lessons were over thankfully fled to the beautiful wilderness in Roxbury (now the "Schoolmaster's Field" in Franklin Park), for his mother established the home in that region for a time.

EACH AND ALL. The germ of this poem, perhaps, is found in this entry in Mr. Emerson's journal:—

"May 16th, 1834. I remember when I was a boy going upon the beach and being charmed with the colors and forms of the shells. I picked up many and put them in my pocket. When I got home I could find nothing that I gathered—nothing but some dry, ugly mussel and snail shells. Thence I learned that Composition was more important than the beauty of individual forms to Effect. On the shore they lay wet and social, by the sea and under the sky."

This passage he introduced into a lecture called "The Naturalist" given in that month before the Boston Natural History Society. The poem, like "Good-bye," was published in *The Western Messenger* in 1839.

N2007: Journal, 1844. "Buonaparte was sensible to the music of bells. Hearing the bell of a parish church, he would pause, and his voice faltered as he said, 'Ah! that reminds me of the first years I spent at Brienne; I was then happy.'"

N2008: Mr. Emerson said, "I think sometimes that my lack of musical ear is made good to me through my eyes: that which others hear I see."

THE PROBLEM. This poem, one of the few that bear a date,—10 November, 1839,—is better known and more often quoted than any other which Mr. Emerson wrote. It is also remarkable in this, that it would almost seem, like *Athene*, to have sprung matured and perfect from its author's brain. No fragments, no trials remain; much fewer verbal changes than is usual appear in the manuscript book of poetry, and not one since the poem saw light in the first number of the *Dial* in July, 1840. Mr. Emerson at first called it "The Priest." Here is the thought as recorded in the journal:—

"August 28, 1838.

"It is very grateful to my feelings to go into a Roman Cathedral, yet I look as my countrymen do at the Roman priesthood. It is very grateful to me to go into an English Church and hear the liturgy read, yet nothing would induce me to be the English priest.

"I find an unpleasant dilemma in this, nearer home. I dislike to be a clergyman and refuse to be one. Yet how rich a music would be to me a holy clergyman in my town. It seems to me he cannot be a man, quite and whole; yet how plain is the need of one, and how high, yes, highest is the function. Here is division of labor that I like not: a man must sacrifice his manhood for the social good. Something is wrong; I see not what."

N2009: The same thought occurs in the essay on Compensation (*Essays, First Series*, p. 108), and this poem is another chapter on the Over-Soul.

N2010: Journal, Florence, 1833. "It is in the soul that architecture exists, and Santa Croce and the Duomo are poor, far-behind imitations."

In the essays on Art (*Essays, First Series* and *Society and Solitude*) the inspiration, in its fullest sense, of the best works of man in Art and Architecture is taught.

N2011: The gentle, serious and humane priest John of Antioch (347–407) was raised to the bishopric of Constantinople. Because of his Homilies (said to be the best in Christian literature) the name Chrysostom (Golden Mouth) was given him by the Ecumenical Council two hundred years after his death.

In sending to a friend the *Confessions of Saint Augustine*, "translated two hundred years ago, in the golden time when all translations seemed to have the fire of original works," Mr. Emerson

said, "I push this little antiquity toward you merely out of gratitude to some golden words I read in it last summer."

Of Taylor (1613–1667), the author of *Holy Living and Holy Dying*, Mr. Emerson said in an early journal:—

"'T is pity Jeremy Taylor could not always remember 'rien n'est beau que le vrai.' I have been reading the 'Contemplations of the State of Man.' An immense progress in natural and religious knowledge has been made since his death. Even his genius cannot quicken all that stark nonsense about the blessed and the damned. Yet in the 'Life of Christ' I have thought him a Christian Plato; so rich and great was his philosophy. Is it possible the intellect should be so inconsistent with itself? It is singular also that the bishop's morality should sometimes trip, as in his explanation of false witness."

TO RHEA. This poem, probably written in 1843, appeared in the *Dial* in July of that year. It is not to be regarded as personal, but general,—even then as an aspect, from the cold heights of pure intellect, the same that is presented in connection with the discussion of Swedenborg's *Conjugal Love*, in *Representative Men*. But Mr. Emerson recognized the danger of individual detachment. The supremacy of the human, the moral element is recognized in all his thought. Even in the fragmentary essay on the Natural History of Intellect, in the volume thus entitled, he warns of the dangers of pure intellect and gives the other aspect: "Affection blends, intellect disjoins;" and elsewhere he gives this counsel, "The Heart knoweth."

THE VISIT. These verses were published in the *Dial* in April, 1844. Great as was Mr. Emerson's hospitality, it was so often overtaxed that he felt that a word of general counsel was due on the subject

of visits. For a call he used to say that fifteen minutes was the limit, except in very unusual circumstances.

Journal, 1842. "'My evening visitors,' said that excellent Professor Fortinbras, 'if they cannot see the clock, should find the time in my face. As soon as it is nine, I begin to curse them with internal execrations that are minute-guns. And yet,' he added, 'the devil take half hospitalities, this self-protecting civility whose invitations to dinner are determined exclusions from the heart of the inviter, as if he said, "I invite you to eat because I will not converse with you." If he dared only say it, that exclusion would be hospitality of angels, an admission to the thought of his heart.'"

URIEL. From its strange presentation in a celestial parable of the story of a crisis in its author's life, this poem demands especial comment. In his essay on Circles, which sheds light upon it, Emerson said, "Beware when the great God lets loose a thinker on this planet." His letters and journals, even while he was a clergyman, show his belief that religion owed to Copernicus a great emancipation. In a later essay he speaks of the great astronomer's destroying the "pagan fictions of the Church by showing mankind that the earth on which we live was not the centre of the Universe,...and thus fitted to be the platform on which the Drama of the Divine Judgment was played before the assembled Angels of Heaven,...but a little scrap of a planet, rushing round the sun in our system, which in turn was too minute to be seen at the distance of many stars which we behold."⁹⁸ The lapses and perturbations of the planets, as seen from the eccentric earth, which troubled the astrologers under the Ptolemaic system, gave way to the beautiful ordered dance of the heavenly bodies, including the comets, around the

⁹⁸ "Historical Notes of Life and Letters in New England," *Lectures and Biographical Sketches*.

sun. From boyhood Emerson was familiar with *Paradise Lost*, and Uriel, the bright Archangel of the Sun, would best see the vast orbits, the returns and compensations, the harmony and utter order of the Universe, —God in all. This did away with Original Sin, a separate principle of Evil, hopeless Condemnation, Mediation,—for Emerson saw in Nature a symbol. The Law was alike in matter and spirit. He had shaken off dogma and tradition and found that the Word

Still floats upon the morning wind,
Still whispers to the willing mind.

The earnest young men on the eve of entering the ministry asked him to speak to them. After serious thought he went to Cambridge (July 15, 1838) to give them the good and emancipating words which had been given to him in solitude, well aware, however, that he must shock or pain the older clergy who were present. The poem, when read with the history of the Divinity School Address, and its consequences, in mind, is seen to be an account of that event generalized and sublimed,—the announcement of an advance in truth, won not without pain and struggle, to hearers not yet ready, resulting in banishment to the prophet; yet the spoken word sticks like a barbed arrow, or works like a leaven.

N2012: While the “young deities” (divines) discuss the Universe, Identity, Illumination, Being and Seeming, one startles them with the doctrine, doing away with arbitrary bound, of Eternal Return, involving Good out of Evil. They only see the Circle, not the Spiral which is Advance combined with Return, adding the element of Progress. They only see in it Revolution, not Evolution. Perhaps Uriel is not yet quite clear. In Mr. Henry Walker’s fine painting of

Emerson's Uriel in the Congressional Library at Washington, clouds of doubt still hang on the Archangel's brow.

Plotinus said, "The Intellect sees because it is turned back to its origin, the One; its movement is circular." Professor Andrews Norton, representing "the stern old war gods," said of the Address, "Theories which would overturn society and resolve the world into chaos." Rev. Henry Ware, honored and loved by Mr. Emerson, who had been associated with him as junior pastor, was one of the frowning seraphs, for he could not quite follow his young friend in his new departure. Another honored friend of Mr. Emerson, the Rev. Nathaniel L. Frothingham, soon after, in a sermon to which the Address gave rise, used as a text, "Some said it thundered, others that an angel spake."

N2013: The Pythagorean doctrine of transmigration of the soul. "Every partial soul must make periods of ascent from and descent into generation, and this forever and ever." (Proclus.) The next two lines suggest a sentence of Plutarch in the *Morals*: "The Sun is the cause why all men are ignorant of Apollo, by sense withdrawing the rational intellect from that which is to that which appears."

N2014: Dr. William T. Harris, in the *Memoir of Bronson Alcott*, apropos of this poem, quotes Plotinus thus:—

"There are two kinds of souls that descend into the world of matter, the higher order, like so many kings, associating with the governor of all things, become his colleagues in the general administration of the world. They descend for the sake of causing the perfection of the universe. The second class of souls descend because they are condemned to suffer punishment."—IV. Ennead, book VIII., chapters 4, 5.

THE WORLD-SOUL. This poem presents with the freshness of a June morning in New England a doctrine from the ancient East. I quote from Mr. George Willis Cooke's excellent *Life of Emerson*⁹⁹ the following passage:—

"Around Plotinus...there grew up a distinct school of thought, teaching the philosophic doctrine of the identity of subject and object, mind and matter, and making intuition the method of knowing. One of his disciples was Porphyry, who distinctly taught that matter emanates from...the soul. Amelius departed so far from Plotinus as to teach the unity of all souls in the World-Soul, a favorite doctrine of Emerson's."

N2015: "But why should you keep your head over your shoulder?...It seems to be a rule of wisdom never to rely on your memory alone, but to bring the past for judgment into the thousand-eyed present, and live ever in a new day....A foolish consistency is the hobgoblin of little minds."—"Self-Reliance."

N2016: This suggests his words on the effect on the fancy of a horn blown among echoing mountains, "Can a musical note be so lofty, so haughtily beautiful?"—"Nature," *Essays, Second Series*.

N2017: In the first few pages of the essay ("Nature") quoted in the note above, are passages on the effect of "these delicately emerging stars, with their private and ineffable glances,...eloquent of secret promises."

⁹⁹ Ralph Waldo Emerson, *his Life, Writings, and Philosophy*. Boston: James R. Osgood & Co., 1881.

N2018: Journal, 1851. "There is something—our brothers over the sea do not know it or own it—...which is setting them all aside, and the whole world also, and planting itself forever and ever."

N2019: September 15, 1842. "I suppose there are secret bands that tie each man to his mark with a mighty force; first, of course, his Dæmon, a beautiful immortal figure, whom the ancients said, though never visible to himself, sometimes to appear shining before him to others."—From *Letters of Emerson to a Friend*.

THE SPHINX. This poem was published in the *Dial* of January, 1841. The only important change it has undergone was the substitution by Mr. Emerson, when he published his *Poems*, of two more pleasing lines for grotesque ones in its first form. The fable is used as an illustration in *Nature, Addresses and Lectures* (p. 34) and in "History," in *Essays, First Series*.

Mr. Emerson wrote in his note-book in 1859: "I have often been asked the meaning of the 'Sphinx.' It is this,—The perception of identity unites all things and explains one by another, and the most rare and strange is equally facile as the most common. But if the mind live only in particulars, and see only differences (wanting the power to see the whole—all in each), then the world addresses to this mind a question it cannot answer, and each new fact tears it in pieces, and it is vanquished by the distracting variety."

Journal, September 3, 1838. "The Egyptian Sphinxes are observed to have all a countenance expressive of complacency and tranquillity: an expression of health. There is much history in that fact."

N2020: "Let a man then know his worth, and keep things under his feet. Let him not peep or steal, or skulk up and down with

the air of a charity-boy, a bastard, or an interloper in the world which exists for him....Man is timid and apologetic; he is no longer upright; he dares not say 'I think,' 'I am,' but quotes some saint or sage. He is ashamed before the blade of grass or the blowing rose."—"Self-Reliance," *Essays, First Series*.

N2021: "Has turned the man-child's head."—*Dial*.

N2022: "Every man's condition is a solution in hieroglyphic to those inquiries he would put."—*Nature, Addresses and Lectures*, p. 4.

N2023:

I am the doubter and the doubt.

"Brahma."

In the latter part of "Nominalist and Realist," in *Essays, Second Series*, this thought is more fully expressed.

ALPHONSO OF CASTILE. This poem was written in the summer of 1847.

Alfonso X. of Castile (1252–84), surnamed the Wise, was a monarch of extraordinary gifts and beneficent activity. I quote the following estimate of him from the *History of Spain*, by Ulick Ralph Burke, M. A.: "If his Royal Highness the present heir apparent to the crown of England were a senior wrangler and a double first-class man at our English universities, if he were called upon to fill the place of astronomer royal of England,...if he had written a more brilliant history than Macaulay, and a finer poem than Tennyson, if he were fit to teach Wagner music and Cayley mathematics, and

if in the intervals of his studies he had found time to codify the entire laws of England into a digest which might endure for six hundred years to come—then and only then could the practical preëminence of his intellectual attainments in modern England represent the practical preëminence of the *sabidura* of Alfonso X. in mediæval Spain."

Alfonso is reported (some say maliciously) to have said, "Had God consulted me in the making of the world, he would have made it differently." Mr. Emerson alludes to King Alfonso in "Nominalist and Realist," in *Essays, Second Series*, p. 238.

N2024: "The cosmical debility" in some of the MS. verses.

N2025: "To weltering Chaos and old Sleep."—MS.

MITHRIDATES. Mithridates Eupator, king of Pontus, who gave the Romans so much trouble by his wiles in the first century B.C., was a man of extraordinary and varied learning. Familiar with the lore of other nations, a botanist and skilled in physic, he studied antidotes, and is reputed to have fed on poisons until he rendered himself immune from their noxious effects. Thus his name stands here as symbolic of the wise man who can find virtue in all things and escape the harm.

The poem was written in 1846.

N2026: In the first edition the poem ended with these lines:—

God! I will not be an owl,
But sun me in the Capitol.

To J. W. The person addressed was Rev. John Weiss, a young clergyman and an able writer, who had seemed to Mr. Emerson to dwell overmuch on Goethe's failings.

DESTINY. This poem, under the name of "Fate," appeared in the *Dial*, in October, 1841.

N2027: Dr. Holmes, in his chapter on Emerson's Poems, says of the passage beginning—

Alas! that one is born in blight,—

"If in the flights of his imagination he is like the strong-winged bird of passage, in his exquisite choice of descriptive epithets he reminds me of the *tenui-rostrals*. His subtle selective instinct penetrates the vocabulary for the one word he wants, as the long slender bill of those birds dives deep into the flower for its drop of honey. Here is a passage showing admirably the two different conditions: wings closed and the selective instinct picking out its descriptive expressions; then suddenly wings flashing open and the imagination in the firmament, where it is always at home. Follow the pitiful inventory of insignificances of the forlorn being he describes with a pathetic humor more likely to bring a sigh than a smile, and then mark the grand hyperbole of the last two lines."

N2028: "The astronomers are very eager to know whether the moon has an atmosphere: I am only concerned that every man have one."—"Aristocracy," *Lectures and Biographical Sketches*.

N2029: In Mr. Emerson's essays or poems a higher note is almost always struck at the end, and here in the last two lines is a good

word reserved, if he can but find it, for the "victim of perpetual slight."

GUY. The balanced soul in harmony with Nature is here described. In one of the earlier verse-books, on the same page with an imperfect form of the six lines beginning "Fearless Guy had never foes," are the following lines, apparently destined for this poem:—

Fine presentiments controlled him,
As one who knew a day was great
And freighted with a friendly fate,
Ere whispered news or courier told him.
When first at morn he read the face
Of Nature from his rising place,
The coming day inspired his speech,
And in his bearing and his gait
Calm expectancy did wait.

N2030: The story of Polycrates, tyrant of Samos, is told by Herodotus. Fortune so constantly smiled on him that Amasis, king of Egypt, bade his friend make some great sacrifice to avert the disaster that must come to balance unbroken prosperity. Polycrates flung his wonderful emerald into the sea. It returned to him in a fish on his table next day. Amasis at once broke off his alliance, and soon overthrow and cruel death befel Polycrates.

HAMATREYA. This poem is a free rendering of a passage in the *Vishnu Purana*, book IV., an everlasting theme which, by changing the imagery to that which surrounded them, Mr. Emerson made striking to his Concord neighbors. The title Hamatreya is evidently

some other version of Maitreya, which occurs in this passage copied from the journal of 1845:—

"I have now given you a summary account of the sovereigns of the earth.—These and other kings who with perishable frames have possessed this ever-during world, and who, blinded with deceptive notions of individual occupation, have indulged the feeling that suggests 'This earth is mine,—it is my son's—it belongs to my dynasty;'—have all passed away. So, many who reigned before them, many who succeeded them, and many who are yet to come, have ceased or will cease to be. Earth laughs, as if smiling with autumnal flowers to behold her kings unable to effect the subjugation of themselves. I will repeat to you, Maitreya, the stanzas that were chanted by Earth, and which the Muni Asita communicated to Janaka, whose banner was virtue.

"How great is the folly of princes who are endowed with the faculty of reason, to cherish the confidence of ambition when they themselves are but foam upon the wave. Before they have subdued themselves, they seek to reduce their ministers, their servants, their subjects, under their authority; they then endeavor to overcome their foes. "Thus," say they, "will we conquer the ocean-circled Earth;" and intent upon their project, behold not death, which is not far off. But what mighty matter is the subjugation of the sea-girt Earth, to one who can subdue himself? Emancipation from existence is the fruit of self-control. It is through infatuation that kings desire to possess me, whom their predecessors have been forced to leave, whom their fathers have not retained. Beguiled by the selfish love of sway, fathers contend with their sons, and brothers with brothers, for my possession. Foolishness has been the character of every king who has boasted, "All this earth is mine—everything is mine—it will be in my house forever;"—for he is dead. How is it possible that such vain desires should survive in the hearts of his descendants, who have seen their progenitor, absorbed by the thirst of dominion, compelled to relinquish me whom

he called his own, and tread the path of dissolution? When I hear a king sending word to another by his ambassador, "This earth is mine; resign your pretensions to it,"—I am at first moved to violent laughter; but it soon subsides in pity for the infatuated fool!

"These were the verses, Maitreya, which Earth recited and by listening to which ambition fades away like snow before the sun."

N2031: Peter Bulkeley, a minister of Odell in Bedfordshire, a man of learning, piety and substance, was silenced by Archbishop Laud for non-conformity, and with many of his flock moved to New England. In company with Simon Willard, of Kent, a man of experience in trade and in military affairs, he made the first inland settlement on land purchased of the Indians, and called it Concord. One of Mr. Emerson's ancestors married his daughter. The other names in the first line are those of some of the first settlers.

THE RHODORA. "The Rhodora" was written in 1834 at Newton, where Mr. Emerson was visiting his uncle, Mr. Ladd. Rev. James Freeman Clarke obtained it for publication in his *Western Messenger* in 1839.

N2032: "This element [Beauty] I call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe."—*Nature, Addresses and Lectures*, p. 24.

THE HUMBLE-BEE. This entry occurs in Mr. Emerson's journal for 1837: "May 9. Yesterday in the woods I followed the fine humble-bee with rhymes and fancies fine." On the next page he wrote, "The humble-bee and pine-warbler seem to me the proper objects of attention in these disastrous times."

N2033: M. René de Poyen Belleisle, in a lecture called *A French View of Emerson*, given before the School of Philosophy in Concord in the summer of 1888, made use of an image drawn from honey-making (which Mr. Emerson borrowed from Montaigne in "Poetry and Imagination," *Letters and Social Aims*, p. 16) to illustrate his method in philosophy: "Comment Emerson se sert-il des ses idées; ou, en autres termes, quelle est sa méthode? Je prononce là un mot qui sonne étrangement quand on parle d'Emerson.... La méthode d'Emerson est toute poétique. Il y a une phrase de Montaigne, que du reste Emerson s'est appropriée, et qui exprime admirablement ce que j'ai dans la pensée. 'Les abeilles,' dit Montaigne, 'qui pillottent de ci, de là, font le miel qui est tout leur; ce n'est plus ni thym ni marjolaine.' Le poète est cette abeille: tout dans l'homme et dans la Nature l'attire et le miel qu'il en destille est sa pensée."

BERRYING. Although Mr. Emerson did not give these verses a place among the *Selected Poems*, they are kept here as giving a pleasant picture of him strolling through the remote pastures on an August afternoon.

N2034: In some manuscript copies, the last line has "to our berries went," in others "from," which seems to have been preferred.

THE SNOW-STORM. "The Snow-Storm" first appeared in the *Dial* for January, 1841.

Journal, November 27, 1832: "Instead of lectures on Architecture, I will make a lecture on God's architecture, one of his beautiful works, a Day. I will draw a sketch of a winter's day. I will trace as I can a rude outline of the far-assembled influences, the contribution of

the universe wherein this magical structure rises like an exhalation, the wonder and charm of the immeasurable deep."

WOODNOTES, I. Mr. Emerson contributed the first part of the "Woodnotes," in October, 1840, to the second number of the *Dial*. He pruned it to its advantage in the *Poems*, but some of the omitted lines are given, as they may interest readers. It began thus:—

For this present hard
Is the fortune of the bard
 Born out of time;
All his accomplishment
From Nature's utmost treasure spent
 Booteth not him.

N2035: The passage which followed in the *Dial* was fuller by several lines, with recurrence of the idea:—

With none has he to do,
And none seek him,
Nor men below,
Nor spirits dim.
Sure some god his eye enchants:—
What he knows nobody wants:
In the wood he travels glad
Without better fortune had,
Melancholy without bad.
Planter of celestial plants,
What he knows nobody wants;
What he knows he hides, not vaunts.

N2036: Journal, 1835. "Trifles move us more than laws. Why am I more curious to know the reason why the star-form is so oft repeated in botany, or why the number five is such a favorite with Nature, than to understand the circulation of the sap and the formation of buds?"

N2037: The passages about the forest seer fit Thoreau so well that the general belief that Mr. Emerson had him in mind may be accepted, but one member of the family recalls his saying that a part of this picture was drawn before he knew Thoreau's gifts and experiences.

N2038: The opening pages of "Nature," in *Essays, Second Series*, describe the "charmed days" and influences that the author found in the woods.

N2039: Omitted lines, from the verse-book:—

Hid in adjoining bowers, the birds
Sang their old speech, older than words.

WOODNOTES, II. The second portion of this poem appeared first in the *Dial* for October, 1841.

The stately white pine of New England was Emerson's favorite tree; hence the graceful drawing by Mrs. Alice Stone which adorns the title-page of these volumes. This poem records the actual fact; nearly every day, summer or winter, when at home, he went to listen to its song. The pine grove by Walden, still standing, though injured by time and fire, was one of his most valued possessions. He questioned whether he should not name his book *Forest Essays*, for, he said, "I have scarce a day-dream on which the breath of the

piners has not blown and their shadow waved." The great pine on the ridge over Sleepy Hollow was chosen by him as his monument. When a youth, in Newton, he had written, "Here sit Mother and I under the pine-trees, still almost as we shall lie by and by under them."

N2040: Here followed, in the original form, these lines:—

Ancient or curious,
Who knoweth aught of us?
Old as Jove,
Old as Love,
Who of me
Tells the pedigree?
Only the mountains old,
Only the waters cold,
Only moon and star
My coævals are.
Ere the first fowl sung
My relenting boughs among;
Ere Adam wived,
Ere Adam lived,
Ere the duck dived,
Ere the bees hived,
Ere the lion roared,
Ere the eagle soared,
Light and heat, land and sea
Spake unto the oldest tree.
Glad in the sweet and secret aid
Which matter unto matter paid,
The water flowed, the breezes fanned,

The tree confined the roving sand,
The sunbeam gave me to the sight,
The tree adorned the formless light;
And once again
O'er the grave of men
We shall talk to each other again
Of the old age behind,
Of the time out of mind,
Which shall come again.

N2041: "The city would have died out, rotted and exploded, long ago, but that it was reinforced from the fields. It is only country which came to town day before yesterday that is city and court to-day."—"Manners," *Essays, Second Series*.

N2042: "Those that live in solitary places are the saviours of themselves, so far as respects human causes."—Plotinus.

N2043: Mr. Emerson's delight in the nebular hypothesis, and evolution, as far as it had then been surmised, appears again and again in his poems. Poetry and the philosophy of the ancient writers had prepared him for the latter belief, and the living Nature in his daily walks confirmed it.

Tyndall spoke of Emerson as "a profoundly religious man who is really and entirely undaunted by the discoveries of science, present, past or prospective; one by whom scientific conceptions are continually transmuted into the finer forms and warmer hues of an ideal world."

N2044: The fable of Proteus, Heracleitus's doctrine of the Flowing, and the modern teaching of the correlation and

conservation of force, Mr. Emerson saw as versions of Identity in Multiplicity. Among many places where he expresses this thought may be mentioned the first pages of "Circles," and in the *Poems* the end of "Threnody," the lines in the "Ode to Beauty," "Thee gliding through the sea of form," etc., and passages on "The Poet" in the Appendix.

N2045: Compare "Merlin," II., celebrating the correspondences and rhymes in Nature.

N2046: Journal, 1846. "As for beauty, I need not look beyond an oar's length for my fill of it.' I do not know whether he [William Ellery Channing] used the expression with design or no, but my eye rested on the charming play of light on the water which he was striking with his paddle. I fancied I had never seen such color, such transparency, such eddies; it was the hue of Rhine wines, it was jasper and verd-antique, topaz and chalcedony, it was gold and green and chestnut and hazel in bewitching succession and relief, without cloud or confusion." See also "Nature," in *Essays, Second Series*, pp. 172, 173.

N2047: Journal, May, 1832. "What has the imagination created to compare with the science of Astronomy? What is there in *Paradise Lost* to elevate and astonish like Herschell or Somerville? The contrast between the magnitude and duration of the things, and the animalcule observer....I hope the time will come when there will be a telescope in every street."

N2048: "The man who shall be born, whose advent men and events prepare and foreshow,...shall not take counsel of flesh and blood, but shall rely on the Law alive and beautiful which works

over our heads and under our feet.”—“New England Reformers,” *Essays, Second Series*.

MONADNOC. In the verse-book of the period between 1833 and 1846 is the half-erased pencilling of an improvisation, the beginning of this poem, very likely written by Mr. Emerson as he sat above the forest waiting for sunrise on the great courses of dark rock, worn by the old glacier; for above the verses is written “1845, 3 May, 4 hours, 10 m., A. M.” It is as follows, the introductory passage of the poem evidently having been written later:—

I stand
Upon this uplifted land
Hugely massed to draw the clouds,
Like a banner unrolled
To all the dwellers in the plains
Round about a hundred miles.
In his own loom’s garment dressed,
By his own bounty blessed,
Thus constant giver,
Yielding many a cheerful river;
Appearing an ærial isle,
A cheerful and majestic pile,
Which morn and crimson eve shall paint
For bard, for lover and for saint;
The country’s core,
Inspirer, prophet evermore;
That which God aloft had set
So that men might it not forget;
It should be their lives’ ornament,
And mix itself with each event;

Their almanac and dial,
 Painter's palette, sorcerer's phial,

.

Mysteries of color duly laid
 By the great painter, light and shade;
 And sweet varieties of time
 And chance
 And the mystic seasons' dance;
 The soft succession of the hours
 Thawed the snow-drift into flowers.

.

By million changes skilled to tell
 What in the Eternal standeth well.

N2049: In the essay in *Conduct of Life*, called "Considerations by the Way," is a passage similar to this.

N2050: Mr. Emerson said that the street must be one of the orator's schools. "The speech of the man in the street is invariably strong, nor can you mend it by making it what you call parliamentary. You say, 'If he could only express himself;' but he does already, better than any one can for him,—can always get the ear of an audience to the exclusion of everybody else."—"Eloquence," *Letters and Social Aims*.

N2051: "A profound thought will lift Olympus....Go and talk with a man of genius, and the first word he utters sets all your so-called knowledge afloat and at large."—"Literary Ethics," *Nature, Addresses and Lectures*.

N2052: To hazard a guess on this riddle, the answer might be, that the berry is the material Universe (whose colors are,—the woods and fields, seen from a mountain, blue and pale yellow, and the heavens, day and night, blue and gold), a symbol of divinity in which all have a share—the Over-Soul. "The poet alone knows astronomy, chemistry, vegetation and animation, for he does not stop at these facts, but employs them as signs."—"The Poet," *Essays, Second Series*.

N2053: Here is a note in verse to the same purpose, apparently taken at Monadnoc:—

Our eyeless bark sails free,
Though with boom and spar
Andes, Alp, or Himmalee,
Strikes never moon or star.

N2054: "All good and great and happy actions are made up precisely of these blank to-days."—"The Times," *Nature, Addresses and Lectures*.

N2055: Dr. Holmes, in his Life of his friend, thus speaks of this poem:—

"How alive he makes Monadnoc! Dinocrates undertook to 'hew Mount Athos to the shape of man' in the likeness of Alexander the Great. Without the help of tools or workmen, Emerson makes 'Cheshire's haughty hill' stand before us an impersonation of kingly humanity, and talk with us as a god from Olympus might have talked."

N2056: The concluding lines of the poem are a shorter essay on Immortality.

Before leaving the subject of Monadnoc, the poems of Mr. Emerson's friends and neighbors should be remembered; Thoreau's fine poem, called "Mountains," on the blue eminences on Concord's western horizon, and the part of Mr. Channing's long poem, "The Wanderer," called "The Mountain." This poem, though of most unequal merit, has lines and passages of great beauty and singular descriptive felicity.

There is also a poem by the late Mr. James Nesmith of Lowell, describing with strength and beauty, through all the lights and phases of the changing year, Monadnoc, where it stands

"Like a huge arrowhead in stone."

Unhappily this poem was only privately printed during the author's life, but it is to be hoped an edition may be published. It seems as if Mr. Nesmith had Mr. Emerson in mind, for he uses for the motto of his "Monadnoc" Shakspeare's line,—

"Seeing a better spirit doth use thy name."

FABLE. This little poem was probably written in 1845. Mr. Emerson liked it well enough to include it in the *Selected Poems*.

ODE. INSCRIBED TO W. H. CHANNING. The circumstance which gave rise to this poem, though not known, can easily be inferred. Rev. William Henry Channing, nephew of the great Unitarian divine, a man most tender in his sympathies, with an apostle's zeal for right, had, no doubt, been urging his friend to join the brave band of men who were dedicating their lives to the destruction

of human slavery in the United States. To these men Mr. Emerson gave honor and sympathy and active aid by word and presence on important occasions. He showed his colors from the first, and spoke fearlessly on the subject in his lectures, but his method was the reverse of theirs, affirmative not negative; he knew his office and followed his genius. He said, "I have quite other slaves to free than those negroes, to wit, imprisoned spirits, imprisoned thoughts."

But after the defection of Daniel Webster from the cause of Freedom, when the strife became more earnest, and Slavery more aggressive, he did important service as a free-lance against it. When the Fugitive Slave Act was passed, he spoke of it in public to his hearers as "a law which every one of you will break on the earliest occasion; a law which no man can abet or obey without forfeiting the name of a gentleman."

N2057: He was impatient when men false to the cause of Liberty in their own day praised, in Fourth of July orations, the Fathers of the Republic for their sacrifices on her behalf. He wrote in his journal: "The Americans by means of this lust of extending their territory, and through this nefarious means of compromising with Slavery, enlarge the land but dwarf the men."

But when the evil was brought to his own door and by the law of the land any householder who gave help or furtherance to the poor fugitive was a felon, Mr. Emerson felt that men of honor could not leave remedy for this wrong and disgrace to geologic time, but that active help was due from them.

ASTRÆA. Mr. Emerson's verse-books show that at first he thought of giving this poem for a title ΓΝΩΘΙ ΣΕΑΥΤΟΝ, the Greek

maxim signifying *Know thyself*; but considering that this would be intelligible only to the few, he gave it the name Astræa.

N2058: "With this prayer on their neck."—First Edition.

N2059: "And its lakes reflect all forms."—First Edition.

ÉTIENNE DE LA BOÉCE. The friendship of Montaigne, as related by himself, with Étienne de la Boécé (or Boetie) has, like that of David and Jonathan, become proverbial. Both were educated for the law at Bordeaux, and they later found themselves in the same parliament or court. When they first met, they ran into each other's arms, as if long acquainted. Étienne was a man who seemed made for whatever he undertook. "The happy strength of his genius rejoiced in difficulties." In troublous times he wrote a purely philosophic work, *Discours de la servitude volontaire*, a brave protest against the tyranny of kings. It was widely read, but brought him disfavor at court. He also wrote graceful, imaginative poems. He died in 1563, at the age of thirty-three.

Mr. Emerson used this name to stand for the perfect friend, utterly loyal, yet austere. In this poem is the spirit of the fourth verse of "Give All to Love." Its thought may be found in "Friendship" (*Essays, First Series*, p. 208) and in "New England Reformers" (*Nature, Addresses and Lectures*, p. 273).

It seems probable that the poem was written in 1833. In the journal of that year, opposite the account of his coming on Montaigne's *Essays* when a boy, Mr. Emerson writes of friends, "Echo them, and you will see fast enough that you have nothing for them. They came to you for somewhat new. A man loves a man."

COMPENSATION. This poetical word on a favorite theme bears the date "New York, 1834."

FORBEARANCE. In writing this poem it is possible that Mr. Emerson had in mind his friend—later his helper and biographer—James Elliot Cabot. It would even better have fitted his friend Henry Thoreau. The date of its printing in the *Dial* (January, 1842) makes this more likely.

THE PARK. "The Park" appeared in the same number of the *Dial* with the preceding poem.

The poem describes the bewilderment which the youth with traditions and manners inbred from generations of Puritan ancestors feels when he first meets charming and gracious friends of a wider experience and culture. Yet the beauty of their behavior seems to warrant the quality of its hidden foundations.

Emerson wrote to such a friend in March, 1841:—

"I find myself, maugre all my philosophy, a devout student and admirer of persons. I cannot get used to them: they daunt and dazzle me still. I have just now been at the old wonder again. I see persons whom I think the world would be richer for losing; and I see persons whose existence makes the world rich. But blessed be the Eternal Power for those whom fancy even cannot strip of beauty, and who never for a moment seem to me profane."

FORERUNNERS. As in the case of "The Problem," almost no trace of work on this poem in honor of the fair Ideals remains. In the book which contains most of the poems included in Mr. Emerson's first collection it appears in but one form, under the name "Guides," with only one word altered and one erased. There is no date, but

Mr. Emerson said that it came to him as he walked home from Wachusett.

There is a passage about the promises, never quite fulfilled, by which Nature leads us, in the Essay of that name in the *Second Series* (p. 192).

SURSUM CORDA. Mr. Emerson had reference in this title to the chanting by the priest, in the introduction to the celebration of the Mass, of the words *Sursum Corda!* (Up, hearts!) to the worshippers.

The thought of this piece—the exaltation that comes with utter humility—did not find quite satisfactory utterance in the poem as printed in early editions, but in its present form he included it in *Selected Poems*.

ODE TO BEAUTY. The Ode was printed in the *Dial* in October, 1843. In the first stanza, as there printed, the third and fourth line read:—

To thee who betrayed me
To be ruined or blest?

and the thirteenth and fourteenth,—

Love drinks at thy banquet
Remediless thirst.

N2060: The last four lines of this stanza were a later addition. Mr. Emerson sent the *Dial* to his young friend Henry Thoreau (then teaching Mr. William Emerson's boys in Staten Island), who had contributed "A Winter Walk" to that number. Mr. Thoreau in a letter of just comment on the magazine wrote, "I have a good deal

of fault to find with your 'Ode to Beauty.' The tune is altogether unworthy of the thoughts. You slope too quickly to the rhyme, as if that trick should be performed as soon as possible, or as if you stood over the line with a hatchet and chopped off the verses as they came out, some short and some long. But give us a long reel and we 'll chop it off to suit ourselves. It sounds like parody. 'Thee knew I of old,' 'Remediless thirst' are some of those stereotyped lines....Yet I love your poetry as I do little else that is near and recent, especially when you get fairly round the end of the line, and are not thrown back upon the rocks."

N2061: Mr. Emerson wrote in October, 1839, to a friend who had lent him a portfolio of engravings, then rare in this country, of the works of the Italian masters:—

"I have your portfolio in my study, and am learning to read in that book too. But there are fewer painters than poets. Ten men can awaken me by words to new hope and fruitful musing, for one that can achieve the miracle by forms. Besides, I think the pleasure of the poem lasts me longer....But the eye is a speedier student than the ear; by a grand or a lovely form it is astonished or delighted once for all, whilst the sense of a verse steals slowly on the mind and suggests a hundred fine fancies before its precise import is finally settled."¹⁰⁰

Margaret Fuller seems also to have sent him a portfolio of reproductions of the drawings of Guercino and Salvator Rosa.

N2062: These four lines were used by Mr. Emerson as the motto for "The Poet," in *Essays, Second Series*.

¹⁰⁰ *Letters from Ralph Waldo Emerson to a Friend*. Edited by Charles Eliot Norton. Boston: Houghton, Mifflin & Co., 1899.

N2063: "Nature is a sea of forms....What is common to them all,—that perfectness and harmony,—is Beauty."—*Nature, Addresses and Lectures*, p. 23.

Mr. Emerson quotes Proclus as saying that *Beauty swims on the light of forms*.

N2064:

Hollow space and lily-bell

is the expression in the verse-book.

N2065: The following scraps from lecture-sheets seem to be appropriate here:—

"Beauty has rightful privilege: may do what none else can, and it shall be blameless. Indeed, all privilege is that of Beauty—of face, of form, of manner, of brain or method."

"How else is a man or woman fascinating to us but because the abode of mystery and meanings never told and that cannot be exhausted? 'T is the fulness of man that runs over into objects, and makes his Bibles and Shakspeares and Homers so great."

GIVE ALL TO LOVE. For this poem, as for the essays on Love and Friendship and the poems "To Rhea" and "The Initial, Dæmonic and Celestial Love," what Mr. Joel Benton says of Mr. Emerson's verses seems true:—

"Let us admit at the outset, if you will, that the fortitude of his strain—as Matthew Arnold says of the verses of Epictetus—'is for the strong, for the

few; even for them the spiritual atmosphere with which it surrounds them is bleak and gray'—and that

'The solemn peaks but to the stars are known,
But to the stars and the cold lunar beams;
Alone the sun arises, and alone
Spring the great streams.'"¹⁰¹

N2066: This thought appears in the image at the end of "The Initial Love":—

As the wave breaks to foam on shelves,
Then runs into a wave again,
So lovers melt their sundered selves,
Yet melted would be twain.

N2067: The last two lines of the poem are used by Kipling in a remarkable manner in his beautiful allegory "The Children of the Zodiac," for which they possibly suggested the theme. Mr. Emerson presents the same idea often in his prose writings, best perhaps in the essay on Compensation:—

"The death of a dear friend, wife, brother, lover, which seemed nothing but privation, somewhat later assumes the aspect of a guide or genius; for it commonly operates revolutions in our way of life, terminates an epoch of infancy or of youth which was waiting to be closed, breaks up a wonted occupation, or a household, or style of living, and allows the formation of new ones more friendly to the growth of character. It permits or constrains the formation of new acquaintances and the reception of

¹⁰¹ *Emerson as a Poet*. By Joel Benton. New York: M. L. Holbrook & Co., 1883.

new influences that prove of the first importance to the next years; and the man or woman who would have remained a sunny garden-flower, with no room for its roots and too much sunshine for its head, by the falling of the walls and the neglect of the gardener is made the banian of the forest, yielding shade and fruit to wide neighborhoods of men."

He quotes Hafiz in the journals to this purpose: "Here is the sum, that when one door opens another shuts."

TO ELLEN AT THE SOUTH. In December, 1827, Mr. Emerson first saw Ellen Tucker, while preaching at Concord, New Hampshire. Just a year later they were engaged to one another. She was very young, but a person of great beauty and refinement. A month after their betrothal, signs of consumption appeared, and her family carried her southward in the spring. Mr. Emerson wrote above this poem, "To E. T. E. at Philadelphia, April, 1829," although they were not married until September of that year. So the initials should have been E. L. T. In spite of her delicate health they had great happiness in the year and a half of life together that was granted them.

Mr. Emerson printed this poem in the *Dial* for January, 1843, under the title, "To Eva at the South," but in the first edition of his *Poems* he restored the name of Ellen.

TO ELLEN. These verses, never before printed, only bear the date "December;" probably the year was 1829.

TO EVA. This poem, also to Ellen, was printed by Mr. Emerson in the *Dial*, July, 1843.

LINES. Besides the preceding poem, Mr. Emerson contributed to the first number of the *Dial* two poems which had sad and tender memories for him. These were his brilliant and loved brother Edward's "Last Farewell" to home and friends when he sailed for Porto Rico, where he died in 1831, and Ellen Tucker's poem written during her engagement. In the *Dial* it bore simply the heading, "Lines."

THE VIOLET. One other poem by Ellen Tucker, printed by Mr. Emerson in the *Dial* in January, 1841, seems a fitting and a pleasant addition to this group.

THE AMULET. This poem, with the same subject and date as the two others by Mr. Emerson which precede it, was published by him in the *Dial* in July, 1842.

THINE EYES STILL SHINED. This poem also was probably written during Mrs. Emerson's absence in the South, either in the Spring before or following her marriage.

N2068: Two pleasing verses follow here which Mr. Emerson did not print:—

With thy high form my sleep is filled,
Thy blazing eye greets me at morn,
Thou dost these days with beauty gild,
Which else were trivial and forlorn.

What arts are thine, dear maiden,
O tell me what arts are thine,
To teach thy name to the rippling wave

And to the singing pine?

N2069: The poem in the manuscript has this ending:—

Why should I sing of thee?
The morning sings of thee;
Why should I go to seek thy face?
No face but thine I see.

EROS. This poem was printed in the *Dial* for January, 1844.

HERMIONE. The history of this poem does not appear. It was written at a time when Mr. Emerson was taking pleasure in the study of the poets of Persia and Arabia. The theme may have been one drawn from them, or it may have been his endeavor, for the consolation of some friend, "to reduce the calamity within the sphere" of the common human experience of disappointment in love. It is the drawing of a great circle around a small one. The poem presents in brief many of the thoughts in the essays on Love and Friendship, and in the poem which serves as motto for the latter.

INITIAL, DÆMONIC AND CELESTIAL LOVE. In all the editions until Mr. Emerson's revision called *Selected Poems* was published in 1876, the second division had the title. "The Dæmonic and Celestial Love," and their treatment was a little confused,—passages really belonging to the "Celestial Love" coming in the second division; the third had no title. The poem as here printed is Mr. Emerson's final arrangement, but the matter, with a few omissions and corrections, is the same as in the first, the ethical confusion having been removed by taking the passage of twenty-six lines, beginning

"But God said," from the "Dæmonic Love," as an introduction of the "Celestial Love."

This poem on the loves on ascending planes carries farther the theme of "Hermione," expounded in full in the essay on Love. The imagery is from the *Banquet* of Plato, of which Mr. Emerson says (*Representative Men*, p. 70) that it "is a teaching...that the love of the sexes is initial, and symbolizes at a distance the passion of the soul for that immense lake of beauty it exists to seek....Body cannot teach wisdom;—God only." There Plato tells of a plane of Dæmonic life between those of the mortal and celestial. In the chapter on Swedenborg, in *Representative Men*, Mr. Emerson says, "In Nature is no end, but everything at the end of one use is lifted into a superior, and the ascent of these things climbs into dæmonic and celestial natures."

N2070: Mr. Emerson in several copies of the *Poems* corrected this line to

Like leaping lions on their prey,

but did not make the change in *Selected Poems*.

N2071: The sentence in the early form was thus finished:—

God-like,—but 't is for his fine pelf,
The social quintessence of self.
Well said I he is hypocrite,
And folly the end of his subtle wit.

N2072: Two lines in the first poem are here omitted:—

Arguments, love, poetry,
Action, service, badinage.

N2073: A much stronger line than the one for which it was substituted,—

These like strong amulets preferred.

N2074: Here followed in the original the passage later rightly placed by Mr. Emerson at the beginning of "The Celestial Love":—

But God said
There is smoke in the flame, etc.

N2075: In the note to the tenth stanza of "The World-Soul," is a reference by Mr. Emerson, quoted from a letter, to the ancient doctrine of Dæmons.

In the passage on the Neo-platonists, in the essay on Books (*Society and Solitude*, p. 203), he said, "The imaginative scholar will find few stimulants to his brain like these writers. He has entered the Elysian Fields; and the grand and pleasing figures of gods and dæmons and dæmoniacal men, of the 'azonic' and the 'aquatic gods,' dæmons with fulgid eyes, and all the rest of the Platonic rhetoric, exalted a little under the African sun, sail before his eyes."

N2076: The four lines thus ending appear separately in one of Mr. Emerson's verse-books, where they are thus continued:—

Of her faults I take no note,
Fault and folly are not mine;
Comes the genius,—all's forgot,

Replunged again into that upper sphere
Which scatters wide and wild its lustres here.

N2077: These four lines here followed in the original,—

He is an oligarch;
He prizes number, fame and mark;
He loveth crowns,
He scorneth drones.

N2078: The doctrine of the blessed fatality of friendship which is found in the essay on the Over-Soul (*Essays, First Series*, p. 294). See also the last lines of the motto of "Compensation."

N2079: This was so true of his friend Thoreau, who yet had ever tenderness concealed under a stoic exterior, that Mr. Emerson said of him, "One would as soon think of taking the arm of an elm-tree as Henry's."

N2080: "Let us not have this childish luxury in our regards, but the austerest worth; let us approach our friend with an audacious trust in the truth of his heart, in the breadth, impossible to be overturned, of his foundations."—"Friendship," *Essays, First Series*.

N2081: "We owe to man higher success than food and fire. We owe to man, man."—"Domestic Life," *Society and Solitude*.

THE APOLOGY. This poem belongs to the early period of its author's Concord life. "May-Day" and the other poems of the later period, notably "Two Rivers," "Rubies" and "Waldeinsamkeit,"

show the gain in musical ear, the lack of which in early days he admitted.

MERLIN. I. Mr. Emerson, in his recoil from academic and imitative versifying, found the rude Norse Sagas, and the no less strong but finer and more imaginative songs of the Welsh Bards, tonic and inspiring. As a boy he had delighted in Ossian. Merlin, in the old English metrical romance, but especially in the *Morte d' Arthur*, stirred his imagination. Then he read the fragmentary poems, not labored or polished, but struck out white-hot with enthusiasm or love or grief, that are attributed to Taliessin, Llewarch Hen and the other great Cymrian bards. Here and in other later poems (the "Song of Merlin" and the motto to "Considerations by the Way," in *Conduct of Life*) he uses Merlin to typify the haughty, free and liberating poet, working the magic of thought through the charm of Art.

Among notes on English poetry in 1853 he wrote:—

"I find or fancy more true poetry, the love of the Vast, in the Welsh and Bardic fragments of Taliessin and his school, than in a good many volumes of British classics."

"Merlin" was finished in the summer of 1846, but in the journal of the year before are its beginnings, which may interest the reader as showing that the finished poem expressed the author's aspiration:—

I go discontented thro' the world
Because I cannot strike
The harp to please my tyrannous ear:
Gentle touches are not wanted,

These the yielding gods had granted.
It shall not tinkle a guitar,
But strokes of fate
Chiming with the ample winds,
With the pulse of human blood,
With the voice of mighty men,
With the din of city arts,
With the cannonade of war,
With the footsteps of the brave
And the sayings of the wise,
Chiming with the forest's tone
When they buffet boughs in the windy wood,
Chiming with the gasp and moan
Of the ice-imprisoned flood.
I will not read a pretty tale
To pretty people in a nice saloon
Borrowed from their expectation,
But I will sing aloud and free
From the heart of the world.

N2082: In his notes for a course of lectures in the winter of 1835–36, among the sentences on “Ideas that predominated in the old English,” is this: “Their poet is not a Pope, but a Talliefer, who, whilst he sings, tosses his sword into the air and catches it as it falls.” Alluding, of course, to the warrior-minstrel who rode out before the Conqueror’s array at Hastings, singing the *Chanson de Roland* and challenging the Saxons.

N2083: On a stray lecture-sheet these words occur: “Do not the great always live *extempore*, mounting to heaven by the stairs of surprise?”

The second part of "Merlin" was omitted by Mr. Emerson in his *Selected Poems*, which is surprising, for it well expressed his favorite idea of correspondence, universal rhyme and harmony in Nature, and compensation in life.

N2084: With this passage may be compared that in the "Woodnotes," II., beginning

Come learn with me the fatal song
Which knits the world in music strong.

N2085: The same thought is to be found in "Clubs," *Society and Solitude*, p. 230.

N2086: "All the facts in natural history, taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life," etc.—*Nature, Addresses and Lectures*, p. 28.

Pythagoras taught that "The world subsists by the rhythmical order of its elements. Everywhere in Nature appear the two elements of the finite and the infinite which give rise to the elementary opposites of the universe, the odd and even, one and many, right and left, male and female, fixed and moved, straight and curved, light and darkness, square and oblong, good and bad."

N2087: Journal, August, 1838. "As they said that men heard the music of the spheres always and never, so are we drunk with beauty of the whole, and notice no particular."

The building power of music is a very ancient thought; the walls of Thebes rose to the music of Amphion's harp. Tennyson makes Merlin tell Gareth at the gates of Camelot,

"A Fairy King

And Fairy Queen have built the city, son;
They came from out a sacred mountain cleft
Towards the sunrise, each with harp in hand,
And built it to the music of their harps."

The idea is used by Mr. Emerson in his poem, "The House."

BACCHUS. In July, 1846, Mr. Emerson wrote from Philadelphia to Miss Elizabeth Hoar, whom he always considered as a sister, of several poems which he has been writing and is impatient to show her, "especially some verses called Bacchus—not, however, translated from Hafiz."

Mr. Emerson wrote in his own copy of the *Poems* this motto, taken from Plato, to "Bacchus," which sheds light: "*The man who is his own master knocks in vain at the doors of poetry.*"

The chapter on Idealism in Mr. Emerson's first published work *Nature* (see *Nature, Addresses and Lectures*, p. 47), gives a key to this poem on the inspiration which Nature gives, when seen as not final, but a symbol of the Universal Mind.

The poem has affinities with both "Alphonso of Castile" and "Mithridates," which were written about the same time.

The influence of Hafiz is apparent in the poem, though it is no translation, and the wine is more surely symbolic than his.

In a somewhat later verse-book than that which contains "Bacchus" are the beginnings of another poem of the same name, of which a portion is here given:—

Pour the wine! pour the wine!
As it changes to foam
So Demiourgos

Rushing abroad,
New and unlooked for,
In farthest and smallest,
Comes royally home;
In spider wise
Will again geometrize;
Will in bee and gnat keep time
With the annual solar chime;
Aphides, like emperors,
Sprawl and creep their pair of hours.
Strong Lyæus' rosy gift
Lightly can the mountain lift;
It can knit
What is done
And what's begun;
It can cancel bulk and time;
Crowds and condenses
Into a drop a tun,
So to repeat
No word or feat;
The hour an altar is of ages,
Love, the Socrates of Sages.

.

On a brown grape-stone
The wheels of Nature turn,
Out of it the fury comes
Wherewith the spondyls burn,
And because a drop of the Vine
Is Creation's heart,
Wash with wine those eyes of thine.
Nothing is hid, nor whole nor part.

Wine is translated wit,
Wine is the day of day,
Wine from the veiled secret
Tears the veil away.

In a lecture on Poetry and Imagination Mr. Emerson said: "The poet is a better logician than the anatomist....He sees the fact as an inevitable step in the path of the Creator....Never did any science originate but by a poetic perception....For a wise surrender to the current of Nature, a noble passion which will not let us halt, but hurries us into the stream of things, makes us truly know. Passion is logical, and I note that the vine, symbol of Bacchus, which intoxicates the world, is the most geometrical of all plants."

N2088: "Plants are the young of the world, vessels of health and vigor; but they grope ever upward towards consciousness; the trees are imperfect men, and seem to bemoan their imprisonment, rooted in the ground."—"Nature," *Essays, Second Series*, p. 181.

MEROPS. The first rhapsody for this poem, from the verse-book (in which a more advanced form bears the title "Rhyme"), shows the writer's longing to express himself in verse, and how patiently he bore the check that his taste, which grew with this desire, put upon it.

What care I, so the things abide,
The heavenly-minded,
The rich and enriching presences,
How long the power to give them form
Stays behind?
If they remain to me,

I can spare that,
I can wail
Till the stammering fit of life is past,
Till the soul its weed has cast,
And led by desire of these heavenly guides
I have come into the free element
And won a better instrument.
They taught me a new speech
And a thousand silences;
For, as there is but one path for the sun,
So is there ever but one word for me to say.

Merops, in the mythology, was king of Cos, and wedded one of the Oceanides, and hence, but only after his death, was granted a place as a soaring eagle among the constellations.

Professor Charles Eliot Norton, Mr. William Sloane Kennedy says, suggested to him as a reason for the title that Merops in Greek means "articulate speech." This gives further appropriateness to the name of the poem.

THE HOUSE. "The House," though not restored to the *Poems* by Mr. Cabot in the Riverside Edition, among others that had that fortune, is restored by the present editor for the charm of its last two verses, although it was not included by Mr. Emerson among the *Selected Poems*.

SAADI. This poem was first published in the *Dial* for October, 1842.

It does not appear in what year Mr. Emerson first read in translation the poems of Saadi, but although in later years he seems to have been strangely stimulated by Hafiz, whom he

names "the prince of Persian poets," yet Saadi was his first love; indeed, he adopted his name, in its various modifications, for the ideal poet, and under it describes his own longings and his most intimate experiences.

Saadi, guarding himself from entangling alliances, living apart and simply and in the great sunny Present, recognizing living and pervading Deity, affirming only, and giving freedom and joy to human, souls, might be Emerson in Oriental mask.

In whatever form he first came on Saadi's verse, Mr. Emerson's letters show that he did not know the *Gulistan* until 1848, and in that year he wrote in his journal: "In Saadi's *Gulistan* I find many traits which comport with the portrait I drew," evidently referring to this poem, which was first printed in the *Dial* for October, 1842. It pleased him to find that the real Saadi approached his type of what the poet should be. In 1865 Mr. Emerson wrote the preface to the American edition of Gladwin's translation of the *Gulistan*, published by Messrs. Ticknor & Fields, in Boston. This explains the omission of an account of Saadi and his poems in the lecture written soon after on "Persian Poetry," now included in *Letters and Social Aims*.

This paragraph concerning him is from Mr. Emerson's journal of 1843:—

"Saadi was long a Sacayi, or water-drawer, in the Holy Land, 'till found worthy of an introduction to the prophet Khizr (Elias, or the Syrian and Greek Hermes), who moistened his mouth with the water of immortality.' Somebody doubted this, and saw in a dream a host of angels descending with salvers of glory in their hands. On asking one of them for whom those were intended, he answered, 'for Shaikh Saadi of Shiraz, who has written a stanza of poetry that has met the approbation of God Almighty.' Khosraw

of Delhi asked Khizr for a mouthful of this inspiring beverage; but he told him that Saadi had got the last of it.

"It was on the coming of Friday in the month Showal, of the Arabian year 690, that the eagle of the immaterial soul of Shaikh Saadi shook from his plumage the dust of his body."

N2089: This reference to the sweet wine of Malaga is a youthful reminiscence. In Mr. Emerson's obituary notice of his townsman and classmate, John Cheney, he says, "I remember the Malaga from Warland's" (the Cambridge grocer), which was the Falernian of the Pythologian club, of which he was the Horace, "as more delicious than any wine I have tasted since."

N2090: "Life is a bubble and a skepticism....Grant it, and as much more as they will, but thou, God's darling, heed thy private dream; thou wilt not be missed in the scorning and skepticism."—*Essays, Second Series*, p. 65.

Mr. George W. Cooke, in his biography, says that Emerson's Divinity School Address "became the subject of frequent sermons, and the air was full of pamphlets and newspaper articles. The Unitarian ministers debated whether Emerson was a Christian; some said he was not; some that he was an atheist; while others earnestly defended him. By some of the 'Friends of Progress'...he was pronounced a pantheist."

N2091: Compare the passage in "The Over-Soul," *Essays, First Series*, p. 293.

N2092: The image is much like that in the poem "Days."

HOLIDAYS. This little poem was printed in the *Dial* for July, 1842.

XENOPHANES. This poem bears the date "Concord, 1834." It is a less agreeable presentation of the ancient doctrine which is happily presented in "Each and All." It represents the sadder mood of Xenophanes of Elea, the rhapsodist and philosopher (570–480 B.C.), who taught the Unity of God and Nature. His doctrine, "Ἐν καὶ πᾶν, the One and the All, constantly recurs in Mr. Emerson's writings, and the poem in his verse-book bears the Greek title.

Xenophanes said, "There is one God, the greatest among gods and men, comparable to mortals neither in form nor thought." Mr. Arthur K. Rogers, in his *Student's History of Philosophy*, says that what Xenophanes taught was "that what we name God is the One immutable and comprehensive material universe, which holds within it and determines all those minor phenomena to which an enlightened philosophy will reduce the many deities of the popular faith. The conception is not unlike that of Spinoza in later times."

It is a remarkable fact that after Mr. Emerson's return from Europe, in 1834, his first lectures were upon Natural History. In a lecture called "The Naturalist," given in May, 1834, is a passage similar to the first four lines of this poem.

N2093: "So poor is Nature that from the beginning to the end of the universe she has but one stuff,—but one stuff with its two ends, to serve up all her dream-like variety."—"Nature," *Essays, Second Series*.

THE DAY'S RATION. Among the few entries in Mr. Emerson's autobiographical note-book several relate to his limited strength and, especially, animal spirits, yet the poem expresses but a mood; his days were full and happy. He had only the right proportion of

divine discontent. The thought of this poem is also expressed in *Representative Men*, p. 184.

BLIGHT. This poem was written in midsummer of 1843. Under the name of "The Times" it was printed in the *Dial* for January of the next year. The latter portion of the poem suggests "Alphonso of Castile."

N2094: "The poet alone knows astronomy, chemistry, vegetation and animation, for he does not stop at these facts, but employs them as signs."—"The Poet," *Essays, Second Series*.

N2095: The teaching of Xenophanes and the Eleatic School.

N2096: A similar passage is found in the "Lecture on the Times," *Nature, Addresses and Lectures*, pp. 287, 288.

MUSKETAQUID. Though born in Boston, Mr. Emerson loved the ancestral village on the Musketaquid. The dear associations of childhood and youth with it are shown in a poem which I have called "At the Old Manse," written when he was twenty-four years old, now for the first time printed, in the Appendix. There also are found the homesick verses written at Naples in 1834. In a letter to his Aunt Mary soon after he settled in Concord, he wrote, "As men say that the apple never falls far from the stem, I shall hope that another year will draw your eyes and steps to this old, dear odious haunt of the race."

N2097: A passage in the essay on Experience (*Essays, Second Series*, pp. 82, 83), and also the poem of that name, printed in this volume, which served as its motto, name "The Lords of Life."

N2098: Two passages from the journal of 1840 are suggested by these three lines:—

"Cyrus Stow wanted his bog-meadow brought into grass. He offered Antony Colombe, Sol Wetherbee, and whomsoever else seed and manure and team and the whole crop, which they accepted and went to work, and reduced the tough roots, the tussocks of grass, the uneven surface, and gave the whole field a good rotting and breaking and sunning, and now he finds no longer any difficulty in getting good English grass from the smooth and friable land. What Stow does with his field, what the Creator does with his planet, the Yankees are now doing with America. It will be friable, arable, habitable to men and angels yet!"

"Over every chimney is a star; in every field is an oaken garland or a wreath of parsley, laurel or wheat-ears. Nature waits to decorate every child."

N2099: Were it not for the passage in his chapter on Swedenborg (*Representative Men*, pp. 113, 114), it would seem unlikely that in this line Mr. Emerson played on the word "concord;" but because of his interest at that time in Swedenborg's *Animal World*, with its doctrine of Microcosm and Macrocosm, the possibility may be recognized.

DIRGE. The explanation of the first two introductory lines, which have a suggestion of Dante about them, is that they were written about the time of Mr. Emerson's thirty-fifth birthday anniversary—when he had completed half of the journey of life allotted to man in Scripture.

Madam Emerson, as she was called in her later years, had six sons: John Clark, William, Ralph Waldo, Edward Bliss, Robert Bulkeley, and Charles Chauncy; and also two daughters, who died in infancy.

But John died too early for his brother Waldo to have any clear remembrance of him. William thus became, on graduating from Harvard at the age of seventeen, his mother's main dependence for aid in supporting the family, though all but Bulkeley (who remained childish through life) helped in turn. William, after teaching school successfully, studied theology in Germany, but was obliged by conscientious doubts to abandon divinity for the law, of which he became a successful and respected practitioner in New York. Waldo, Edward and Charles were drawn together by close ties of taste and sympathy, and circumstances allowed them to remain longer together. They eagerly embraced every chance to visit their grandmother, widow of the Rev. William Emerson of Concord, and later wife of Dr. Ezra Ripley, at the Old Manse. This poem and another version of it, printed in the Appendix under the title of "Peter's Field," recall the happy and sad associations with the Great Meadows and Cæsar's Woods. Edward died in 1834, and Charles two years later. Dr. Holmes and Mr. Cabot in their biographies paid a tribute to these brilliant youths, dying before their prime.

N2100: "The flower of silken leaf" was the humble lespedeza, which, in after years, Mr. Emerson seldom passed without a tender word for it to his children.

THRENODY. This "Ode of Tears" was not all written at one time. Little Waldo, the first-born of his parents, died in January, 1842, and the first part of the poem is the expression of his father's great sorrow. The latter portion, beginning

The deep Heart answered, 'Weepest thou?'

was not written until Time and Thought had brought their healing.

A month after the child's death, his father, in writing to his childless friend, Carlyle, said, "My son, a perfect little boy of five years and three months, has ended his earthly life. You can never sympathize with me; you can never know how much of me such a young child can take away. A few weeks ago I accounted myself a very rich man, and now the poorest of all.... From a perfect health and as happy a life and as happy influences as ever child enjoyed, he was hurried out of my arms in three short days by scarlatina. We have two babes yet, one girl of three years, and one girl of three months and a week, but a promise like that Boy's I shall never see. How often I have pleased myself that one day I should send to you this Morning Star of mine, and stay at home so gladly behind such a representative. I dare not fathom the Invisible and Untold to inquire what relations to my Departed ones I yet sustain."

Of the poem Dr. Holmes said, "It has the dignity of Lycidas without its refrigerating classicism, and with all the tenderness of Cowper's lines on the receipt of his mother's picture."

Two days after Waldo's death his father wrote in his journal:—

"30 Jan. What he looked upon is better, what he looked not upon is insignificant. The morning of Friday I awoke at three o'clock, and every cock in every barn-yard was shrilling with the most unnecessary noise. The sun went up the morning sky with all his light, but the landscape was dishonored by this loss. For this boy, in whose remembrance I have both slept and awaked so oft, decorated for me the morning star and the evening cloud,—how much more all the particulars of daily economy.... A boy of early wisdom, of a grave and even majestic deportment, of a perfect gentleness.... He gave up his little innocent breath like a bird."

N2101: "The boy had his full swing in this world. Never, I think, did a child enjoy more. He had been thoroughly respected by his parents and those around him, and not interfered with; and he had been the most fortunate in respect to the influences near him, for his Aunt Elizabeth [Hoar] had adopted him from his infancy, and treated him ever with that plain, wise love which belongs to her....Then Henry Thoreau had been one of the family for the last year and charmed Waldo by the variety of toys, whistles, boats, popguns and all kinds of instruments which he could make and mend; and possessed his love and respect by the gentle firmness with which he always treated him. Margaret Fuller and Caroline Sturgis had also marked the boy, and caressed and conversed with him whenever they were here."

N2102: Journal. "The chrysalis which he brought in with care and tenderness and gave to his mother to keep is still alive, and he, most beautiful of the children of men, is not here."

N2103: The idea of Deity rushing into distribution is treated at length in the first part of the *Timæus* of Plato.

N2104: CONCORD HYMN. From a copy of this hymn as first printed on slips for distribution among the Concord people at the celebration of the completion of the monument on the battle-ground, I note the differences from the poem here given as finally revised by Mr. Emerson in the *Selected Poems*. In the early editions of the *Poems* the date is given as 1836. This is a mistake. The *Middlesex Yeoman* gives the account of this celebration in 1837, and on the original slip in my possession some one sending it to a friend at that time, has written "Sung by the people on battle-ground at the completion of the monument, 4th of July, 1837."

The first two verses retain exactly their original form. In the third, the third line, as sung, was

We place with joy a votive stone.

The last verse originally began

○ Thou, who made those heroes dare
To die or leave their children free.

MAY-DAY

In 1867, Mr. Emerson gathered into a new volume the poems of the twenty-one years since the publication of the first, and gave it the name *May-Day* from the happy lyric in honor of Spring with which it opens. His ear had improved, and, though the original vigor remained in the poems, many of them had been kept long by him and had ripened fully. "May-Day," the poem, was probably written in snatches in the woods on his afternoon walks, through many years. Some lines are in journals of 1845. After its publication he saw that the ordering of the different passages to give the advance of Spring was not quite successful, and in the *Selected Poems*, published nine years later, he improved, but did not quite perfect, the arrangement, for at that time he found mental effort of that sort confusing. Therefore in the posthumous edition of the *Poems* in 1883, at the suggestion of the present editor, Mr. Cabot consented to a slight further change made with the same intent.

N2105: Of the following six lines in one of the verse-books all but the first were in the first edition:—

Dripping dew-cold daffodillies,
Making drunk with draught of lilies,
Girls are peeling the sweet willow,
Poplar white, and Gilead-tree,
And troops of boys shouting with whoop, and hilloa
And hip, hip, three times three.

N2106: This line with a suggestion of English pastoral, found in the first edition, was omitted by the author:—

Or clapping of shepherd's hands.

N2107: The stanza had, in the first edition, a different ending:—

The cowslips make the brown brook gay;
A happier hour, a longer day.
Now the sun leads in the May,
Now desire of action wakes,
And the wish to roam.

N2108: In the verse-book here followed the couplet—

Her cottage chamber, wall and beam,
Glow with the maid's delicious dream.

N2109: It seems as if it must have been by accident that the remarkable lines, concluding this stanza, beginning "The youth sees omens,"—six of which, in a different order, served as the motto to the second edition of *Nature*, in 1849,—were omitted in the posthumous edition. They followed immediately in this place.

N2110: These last four lines are often quoted to show how early Mr. Emerson accepted the doctrine of evolution. It is not certain in what year they were written, but a sentence in the unpublished lecture on the Humanity of Science, given in Boston in 1836, has exactly the same thought. He alludes to Lamarck as "finding a monad of organic life common to every animal, and becoming a worm, a mastiff, or a man, according to circumstances. He says to the caterpillar, How dost thou, brother? Please God, you shall yet be a philosopher."

The ancient philosophers, as well as the modern savans, taught Emerson evolution. To the first edition of *Nature* Mr Emerson prefixed a motto from Plotinus, and Dr. William T. Harris finds the thought of the later motto in these words from the same source: "We might say that all beings, not only the rational ones but even the irrational ones, the plants and even the soil that bears them, aspire to attain conscious knowledge."

In his journal for 1849 Mr. Emerson quotes this sentence from Stallo: "The development of all individual forms will be spiral."—*General Principles of the Philosophy of Nature*; Boston, 1848.

N2111: Mr. Nicholas Longworth, who practised wine-making on a large scale near Cincinnati, was Mr. Emerson's host when he lectured there, and, according to Mr. M. D. Conway, suggested this thought when he showed his wine-cellars to his guest, by telling him of the renewed activity of fermentation in the Spring.

N2112: Journal, 1856. "April 5, Walden fired a cannonade yesterday of a hundred guns, but not in honor of the birth of Napoleon."

In Concord, by village comity, the two field-pieces of the Concord Artillery Company were too often lent to political

enthusiasts to celebrate the election of their pro-slavery candidate, and the editor thinks that he remembers their firing, on the news of the passage of the Kansas-Nebraska Bill.

N2113: It is interesting to see how the association of blessed warmth and life with his favorite South-wind led the author to forget that the southing of the sun meant the coming of winter. Yet "the northing of the sun" would have a comfortless sound.

N2114: In his college days the boy must often have gone to the beautiful wooded hills of Mount Auburn, not then a cemetery, above the broad marshes of the Charles River. Journal, 1861. "Ah, the powers of the Spring, and ah, the voice of the bluebird and the witchcraft of the Mount Auburn dell in those days!"

N2115: Journal, 10 June, 1838. "Noon. Mercury, 90° in the shade. River of heat, yea, a circumambient sea. Welcome as truly as finer and coarser influences to this mystic solitary 'purple island' that I am! I celebrate the holy hour at church amid these fine Creative deluges of light and heat which evoke so many gentle traits, gentle and bold in man and woman. Man in Summer is Man intensified."

N2116: These lines of the original were omitted:

Boils the world in tepid lakes,
Burns the world, yet burnt remakes;
Enveloping heat, enchanted robe,
Wraps the daisy and the globe.

N2117: In one of the verse-books I find the original rhapsody of this part of the poem, which runs thus:

The Spring comes up from the South
And Earth and air are overflowed,
Earth with the melted ice,
And air with love infusion.
There is no house or hall
Can hold her festival.
We will go to her haughty woods
Fronting the liberated floods;
We will go to the relenting mountains,
And listen to the uproar of joy,
And see the sparkle of the delivered rivers,
And mark the rivers of sap
Mounting in the pipes of the trees,
And see the colors of love in birds,
And in frogs and lizards,
And in human cheeks,
In the song of birds
And songs of men.

N2118: Here are some notes on Nature's spices, from a verse-book:—

Spices in the plants that run
To bring their first fruits to the sun,
Earliest heats that follow frore,
Nerved leaf of hellebore,
Scarlet maple-keys that burn
Above the sassafras and fern,
Frost survivors, berries red,
Checkerberry,—children's bread,—
Silver birch and black

With the selfsame spice to find
In polygala's root and rind;
Mouse-ear, cowslip, wintergreen,
Which by their beauty may repel
The frost from harming what is well.

N2119: The divine days in lowly disguise often appear in Mr. Emerson's writings in prose and verse: at best here and in the poem "Days," but also in "Works and Days" (*Society and Solitude*, p. 168) and in the first paragraph of the "Lecture on the Times," in *Nature, Addresses and Lectures*.

N2120: This affectionate address to the birds may be found in another version among the "Fragments on Nature," in the Appendix to the *Poems*.

N2121: Mr. Emerson was told in 1874, by his brother-in-law, Dr. Charles T. Jackson, that while making a geological survey near Pulpit Rock, on Lake Superior, he heard music like rhythmical organ or vocal chantings, and believed it to come from some singers. He went on a little farther and the music ceased; in another direction, and he heard it again; and by and by perceived that it was the sound of the beating waves on the shore, deprived of its harshness by the atmosphere. This phenomenon, which he called Analyzed Sound, he had never seen treated scientifically, except in a paper by Dr. Wollaston.

I myself, while going across the Plains in an emigrants' caravan in July, 1862, when in the neighborhood of Fort Laramie, strayed alone three or four hundred yards from our camp into a grove of large cottonwoods on the shore of the North Platte River. Suddenly I heard wonderful music not far away, which I could not

account for. It seemed loud but rather sad, perhaps suggesting cathedral music, yet was indistinct and seemed unnatural. It was wholly unlike the tom-tom and hideous chanting of the Sioux, and no white settlement or gathering was near except our camp. On my return thither I asked about the music. No one had heard it. The day was cold and cloudy, after great heat,—a brisk norther blowing. We were close by the broad, rushing Platte leaping in short waves in the wind. Only some time after my return did I hear from my uncle of his similar experience.

In "May-Day," as first published, here followed the passage on the Æolian Harp which, in the *Selected Poems*, Mr. Emerson preferred to print as a separate poem. It appears as such in this volume.

N2122: From this place was omitted the line,

Nor noon nor eve this music fails.

THE ADIRONDACS. In August, 1858, Mr. William J. Stillman, an artist by profession, but a man almost of the versatility in accomplishment of The Admirable Crichton, as painter, writer, critic, foreign consul (in which service he showed himself a chivalrous Philhellene), and last, not least, an accomplished woodsman and hunter, led a party of his friends into the then primæval forest of the Adirondac Mountains. The party were, Stillman, Agassiz, Lowell, Judge Hoar, Dr. Jeffries Wyman, the comparative anatomist; Samuel G. Ward, a near friend of Mr. Emerson's; Dr. Estes Howe, John Holmes (brother of Dr. Oliver Wendell Holmes), Horatio Woodman, Dr. Amos Binney, and Emerson. Mr. Stillman in his autobiography¹⁰² gives

¹⁰² *The Autobiography of a Journalist*. Boston: Houghton, Mifflin & Co. 1901.

a very interesting account of this company, the region, and their adventures. The following notes of the trip I find in Mr. Emerson's journals. All readers of Lowell will feel pleasure in reading the unexpected postscript to the osprey-nest story.

"Adirondac, August 7th, 1858. Follansbee's Pond. It should be called Stillman's henceforward, from the good camp which this gallant artist has built, and the good party he has led and planted here for the present at the bottom of the little bay which lies near the head of the lake.

"The lake is two miles long, 1 to ½ mile wide, and surrounded by low mountains. Norway pine and white pine abound.

"On the top of a large white pine, in a bay, was an osprey's nest, around which the ospreys were screaming, 5 or 6. We thought there were young birds in it, and sent Preston to the top. This looked like an adventure. The tree must be 150 feet high at least; 60 feet clean straight stem, without a single branch, and, as Lowell and I measured it by the tape as high as we could reach, 14 ft. 6 inches in girth. Preston took advantage of a hemlock close by it and climbed till he got on the branches, then went to the top of the pine and found the nest empty, tho' the great birds wheeled and screamed about him. He said he could climb the bare stem of the pine, 'tho' it would be awful hard work.' When he came down, I asked him to go up it a little way, which he did, clinging to the corrugations of the bark. Afterwards Lowell watched for a chance to shoot the osprey, but he soared magnificently and would not alight.

"The pond is totally virgin soil, without a clearing in any point, and covered with primitive woods, rock-maple, beech, spruce, white cedar, arbor vitæ. We have seen bald eagles, loons, ravens, kingfishers, ducks, tatlers. We have killed 2 deer yesterday, both in the lake, and otherwise fed our party with lake-trout and river-trout. The wood-thrush we heard at Stephen Bartlett's carry, but not since, and no other thrush.

"River, lake and brook trout cannot be scientifically discriminated, nor yet male from female.

"Lowell, next morning, was missing at breakfast, and when he came to camp told me he had climbed Preston's pine-tree."

Mr. Stillman painted the forest camp and the company. Mr. Herbert W. Gleason's remarkably successful photograph of the painting (left to the Concord Library by Judge Hoar) might almost seem a photograph from Nature, so faithfully did Mr. Stillman give the character and the values of the trees. At the left of the picture, Agassiz, helped by the tall Dr. Wyman, is dissecting a fish, while Dr. Estes Howe looks on, and Mr. Holmes, who was lame, sits close by. On the right, Dr. Binney is aiming his rifle at a mark, and a little behind, Lowell and Judge Hoar are waiting their turn to shoot, and Mr. Woodman sits on the ground. The tall, lean figure behind the marksman is the painter himself, hardly distinguishable in the photograph, their tutor in the art of shooting, of which he was master. The guides at the right of the picture critically watch the mark to see the results of the amateurs.

Between the groups, admiring their accomplishments, which are yet foreign to him, but more occupied with Nature in her columned temple, is the poet. The reproduction is too small to do justice to the figure and attitude, which in the picture are given with wonderful success, and but for the unwonted, flannel shirt, it might well represent him in his daily commune with the pines.

N2123: A remarkable picture, "The Procession of the Pines," was painted of this subject by Mr. Stillman, huge Norway pines on a high promontory standing black against the orange twilight glow, and reflected in the still lake.

N2124: This was Mr. Emerson's own experience: paddled noiselessly by the guide, in a boat with torch and reflector in the bow, he was bidden to shoot at the staring "deer" among the lily-pads by the shore. The "square mist" was too much of an illusion, even to the student of *Oriental Mayas*; he did not fire, and in an instant it was gone.

N2125: An Adirondac Club was formed, and Mr. Stillman succeeded in buying for them a lake (Ampersand) and its enclosing mountains, sold for unpaid taxes, at a ridiculously low price. But some people of that part of New York, understanding that Boston capitalists had bought a large tract, could not credit the avowed purpose of the buyers, and, supposing that they knew of some coming railroad and had designs on the lumber, redeemed the land. The camp at Lake Ampersand was, however, occupied by the Club in 1859, but Mr. Emerson did not go there.

N2126: Mr. Emerson always held that the introverted eye, and apprehension, had much to do with perverted digestion.

N2127: Here is an instance of the interest and pride which this man of the spirit took even in the application of scientific discovery to the convenience of man. It represented an advance and ascent, and this particular discovery was to weld the races together in brotherhood. A prophecy of this event he wrote in his Concord "Ode for the Fourth of July" of the previous year.

N2128: The trial for the passage in the verse-book reads thus:—

To be a brain,
Or to obey the brain of upstart man,

And shake the slumbers of a million years.

BRAHMA. This poem was one of the four which Mr. Emerson contributed to the first number of the *Atlantic Monthly*, in November, 1857. In his note-book for the year before, where it is called "The Song of the Soul," are many pages of extracts from the Hindoo scriptures, yet not those to which the poem gives expression. The first appearance of the doctrine is found in an extract from Parmenides given in the notes on Degerando's *Histoire Comparée des Systèmes de Philosophie*, made by Mr. Emerson in 1830: "Thought and the object of thought are but one."

In the year 1845 he was reading the *Vishnu Purana*, and made these among other extracts:—

"He who eternally restrains this and the other world, and all beings therein, who standing in the earth is other than the earth, whom the earth knows not, whose body the earth is, who interiorly restrains the earth, the same is thy soul, and the Internal Check immortal."

"What living creature slays or is slain? What living creature preserves or is preserved? Each is his own destroyer or preserver, as he follows evil or good."

The latter extract he thus rendered in 1845:—

What creature slayeth or is slain?

What creature saves or savèd is?

His life will either lose or gain,

As he shall follow harm or bliss.

Dr. William T. Harris, in his interesting chapter on Emerson's Orientalism,¹⁰³ sheds much light on the origin of the poem, quoting various passages in the *Bhagavat-Gita*. The thought of the first verse is thus rendered by Thomson in his translation of the second chapter:—

"He who believes that this spirit can kill, and he who thinks that it can be killed, both of these are wrong in judgment. It neither kills nor is killed. It is not born nor dies at any time. It has no origin, nor will it ever have an origin. Unborn, changeless, eternal, both as to future and past time, it is not slain when the body is killed."

Many passages show the independence of Brahma of Time and Space, and the absence in Indian philosophy of the dualism of the Persians, believing in separate principles of Good and Evil; thoughts conveyed in the second verse.

The equivalent of the last line in the third verse Dr. Harris finds in the tenth chapter, where Brahma says, "Of the Vedas, I am the Sāma-Veda. I am the Vrihatsaman among the hymns."

The "Strong Gods" of the fourth verse are Indra, god of the sky and wielder of the thunderbolt; Agni, the god of fire; and Yama, the god of death and judgment. These shall finally be absorbed into Brahma. The "Sacred Seven" are the Maharshis or highest saints.

The last line finds its origin in the eighteenth chapter:—

"Abandoning all religious duties, seek me as thy refuge. I will deliver thee from all sin. Be not anxious."

¹⁰³ *Genius and Character of Emerson; Lectures at the Concord School of Philosophy*. Edited by F. B. Sanborn, Boston: J. R. Osgood & Co., 1885.

The striking passage from the Oriental scriptures with which the essay on Immortality concludes might well be read in connection with this poem.

In "The Sphinx," the line,

Thou art the unanswered question,

is matched by that in this poem,

I am the doubter and the doubt.

In a little book in which Mr. Emerson collected quotations concerning Love, he wrote, "The best word I know on the subject is the motto on a little engraving of the heavenly Cupid, who is represented as turning his head to look down on the towers of Heaven, and underneath is written *Superna respicit Amor*,—He looketh back on Heaven."

In spite of the difficulties which "Brahma" presented to many minds, and the ridicule which it excited, it presented no difficulty to others who had no Oriental knowledge except that of the New Testament. A little school-girl was bidden by her teacher to learn some verses of Emerson. Next day she recited "Brahma." The astonished teacher asked why she chose that poem. The child answered that she tried several, but could n't understand them at all, so learned this one, "for it was so easy. *It just means 'God everywhere.'*"

Mr. Emerson, much amused when people found "Brahma" puzzling, said to his daughter, "If you tell them to say Jehovah instead of Brahma they will not feel any perplexity."

NEMESIS. This poem, from *May-Day*, called "Destiny" in the verse-books, is here restored.

N2129: FATE. "The reason why this or that man is fortunate is not to be told. It lies in the man; that is all anybody can tell you about it."—"Character," *Essays, Second Series*.

"He [man] thinks his fate alien because the copula is hidden. But the soul contains the event that shall befall it."—"Fate," *Conduct of Life*.

FREEDOM. In the autumn of 1853 Mr. Emerson wrote in his journal the beginnings of this poem expressing his feeling that no muse would help should he attack in song African Slavery, the doleful theme that recurred each morning when he woke. But in life and his private and public speech he was true to Freedom.

In the first form, the lines, after the fourth, ran thus:—

But the God said, 'Not so;
Theme not this for lyric flow,
Keep thy counsel soft and low;
Name too holy to be said,
Gift too precious to be prayed,
Counsel not to be exprest,
But by will of glowing breast.
But the power by heaven adored,
With Truth and Love the Triune Lord,
When it listed woke again
Brutish millions into men,' etc.

The last line appears also in the forms,
"Right thou feelest rashly do," or, "instant do."

ODE. Mr. Emerson was reluctant to mount Pegasus to war against the enemies of Freedom; but when, as he said in his speech on the Fugitive Slave Law (*Miscellanies*), it required him to become a slave-hunter, he was stirred to plead her cause in verse, of which this and the two following poems are examples.

The occasion on which this was sung was a breakfast in the Town Hall, on the holiday morning, to raise money for the improvement of the new cemetery in Sleepy Hollow.

BOSTON HYMN. In January, 1862, in an address called "American Civilization" given before the Smithsonian Institution in Washington, Mr. Emerson had earnestly urged the emancipation of the slaves. On the first day of the next year, when President Lincoln's Proclamation went into effect, Mr. Emerson read this poem at a great celebration of the event in Boston. It was published in the *Atlantic Monthly* for February, 1863.

N2130: In an address before the Anti-Slavery Society in New York in 1855, Mr. Emerson had urged the buying by the people of the whole slave property of the South:—

"I say, Buy! never conceding the right of the planter to own, but acknowledging the calamity of his position, and willing to bear a countryman's share in relieving him, and because it is the only practical course and is innocent...We shall one day bring the States shoulder to shoulder, and the citizens man to man, to exterminate slavery. It was said a little while ago that it would cost a thousand or twelve hundred millions, now it is said it would cost two thousand millions; such is the enhancement of property. Well, was there ever any contribution that was so enthusiastically paid as this will be? The United States will be brought to give every inch of their public lands for a purpose like this. Every State will

contribute its surplus revenue. Every man will bear his part. We will have a chimney tax. We will give up our coaches and wine and watches. The church will melt her plate. The father of his country shall wait, well pleased, a little longer for his monument;—Franklin will wait for his; the Pilgrim Fathers for theirs; and the patient Columbus, who waited all his mortality for justice, shall wait a part of immortality also....The rich shall give of their riches; the merchants of their commerce; the mechanics of their strength; the needlewomen will give, and children can have a Cent Society. If, really, the thing could come to a negotiation and a price were named, I do not think that any price, founded upon an estimate that figures could fairly represent, would be unmanageable. Every man in this land would give a week's work to dig away this accursed mountain of slavery, and force it forever out of the world."

VOLUNTARIES. This poem was printed in the *Atlantic Monthly* for October, 1863.

N2131: In July, 1863, Colonel Robert Gould Shaw, who in face of a half-hostile public opinion had given up his commission in a favorite Massachusetts regiment to take command of one of the first enlisted colored regiments, largely made up of ex-slaves, had been killed with many of his officers and men on the slopes of Fort Wagner. This poem may be regarded as their dirge.

Mrs. Ednah' Cheney describes a meeting, during the Civil War, presided over by Father Taylor, of the friends of this regiment. She says that, during the meeting, "Mr. Emerson came in from the ante-room with his face on fire with indignation, as I never saw it on any other occasion, and announced to the audience that he had just learned that South Carolina had given out the threat that colored soldiers, if captured, should not be treated as prisoners, but be put to death. 'What answer does Massachusetts send back

to South Carolina?' he said. 'Two for one!' shouted voices in the audience. 'Is that the answer that Massachusetts sends?' he asked; and the audience responded with applause. He retired from the platform, it seemed to me a little appalled at the spirit he had raised."

N2132: The last four lines of the stanza were added by Mr. Emerson in *Selected Poems*.

N2133: The last stanza suggests the following passages, the first being from the journal of January, 1861, three months before the outbreak of war.

"The furious slaveholder does not see that the one thing he is doing by night and by day is to destroy slavery. They who help and they who hinder are all equally diligent in hastening its downfall. Blessed be the inevitabilities."

"The world Fate, or Destiny, expresses the sense of mankind...that the laws of the world do not always befriend, but often hurt and crush us. Fate, in the shape of *Kinde* or Nature, grows over us like grass..."

"Through the years and the centuries, through evil agents, through toys and atoms, a great and beneficent tendency irresistibly streams."—*Representative Men*, pp. 177, 185, 186.

LOVE AND THOUGHT. With this poem may be compared the seventh verse in "My Garden," and passages in "Love" (*Essays, First Series*, pp. 175–177) and in "Manners" (*Essays, Second Series*, pp. 150, 151).

UNA. The solution of the pleasing riddle "Una," restored here to the place it held in the volume *May-Day*, cannot be given with

authority. It might be the sense of the general beauty refreshed in a poetical mind by new scenes and friends met in travel—the momentary opening of new vistas of promise.

BOSTON. Although this poem did not come to its birthday until December 16, 1873, when Mr. Emerson read it in Faneuil Hall, on the Centennial Celebration of the destruction of the tea in Boston Harbor, it was conceived years before. Mr. Emerson wrote in his journal in 1842:—

"I have a kind of promise to write, one of these days, a verse or two to the praise of my native city, which in common days we often rail at, yet which has great merits to usward. That too, like every city, has certain virtues, as a museum of the arts. The parlors of private collectors, the Athenæum Gallery, and the college become the city of the city. Then a city has this praise, that as the bell or band of music is heard outside beyond the din of carts, so the beautiful in architecture, or in political and social institutions, endures; all else comes to nought, so that the antiquities and permanent things in each city are good and fine."

On his walks with his children on Sunday afternoons Mr. Emerson would often recite poetry to them, and they remember well his telling of his desire to write his Boston poem, and his pleasure in this image,—

And twice a day the flowing sea
Takes Boston in its arms.

In his manuscript it opens thus:—

The land that has no song

Shall have a song to-day:
The granite hills are dumb too long,
The vales have much to say:
For you can teach the lightning speech,
And round the globe your voices reach.

Mr. Emerson was never able to finish the poem to his satisfaction. He wished to have a sort of refrain of two rhyming lines at the end of each verse, but after his illness in 1872 his powers of composition failed, and but a portion of his verses were thus rounded out.

The poem appeared first in print in the *Atlantic Monthly* for February, 1876, and in Mr. Emerson's *Selected Poems*, published the same year, it was the concluding poem.

The motto of Boston, which precedes the poem, he translates thus in the last verse,—

GOD WITH THE FATHERS, SO WITH US.

N2134: The poem was begun in the sad days preceding the war, when its author blushed for the timidity shown by many of Boston's first citizens, scholars and merchants, and their subservience in the interests of union and commerce to the demands made by the slave-power upon their honor and conscience. When the war had cleared the air, the poem was quite remodelled in a happier day, for the "Boston Tea-Party" celebration.

The following are some of the verses, composed at a sadder time, which, in the early form, followed the lines on Lafayette:—

O pity that I pause!
The song, disdainingly, shuns
To name the noble sires because

Of the unworthy sons;
For what avail the plough or sail,
Or land or life, if freedom fail?

But there was chaff within the flour,
And one was false in ten,
And reckless clerks in lust of power
Forgot the rights of men;
Cruel and blind did file their mind,
And sell the blood of human kind.

Your town is full of gentle names
By patriots once were watchwords made;
Those war-cry names are muffled shames
On recreant sons mislaid.
What slave shall dare a name to wear
Once Freedom's passport everywhere?

Oh welaway! if this be so,
And man cannot afford the right,
And if the wage of love be woe,
And honest dealing yield despite.
For never will die the captive's cry
On the echoes of God till Right draws nigh.

Here is a verse written at another time of patriotic mortification:—

O late to learn, O long betrayed,
O credulous men of toil,
Who took the traitor to your hearths
Who came those hearths to spoil.

O much-revering Boston town
Who let the varlet still
Recite his false, insulting tale
On haughty Bunker Hill.

The following fragment in lighter vein also occurs in the verse-book:—

O Boston city, lecture-hearing,
O Unitarian, God-fearing,
But more, I fear, bad men revering,
Too civil by half; thine evil guest
Makes thee his byword and his jest,
And scorns the men that honeyed the pest,—
Piso and Atticus with the rest.
Thy fault is much civility,
Thy bane respectability,
And thou hadst been as wise and wiser
Lacking the Daily Advertiser.
Ah, gentlemen—for you are gentle—
And mental maids, not sentimental—

In the volume called *Natural History of Intellect and Other Papers*, is included Mr. Emerson's lecture "Boston," in which he shows his pride and interest in his native town. Mrs. Ednah Cheney contributed an interesting chapter on "Emerson and Boston" to the book published in 1885 by the Concord School of Philosophy, called *Genius and Character of Emerson*.

N2135: LETTERS. The poem at first began,

Every morning brings a ship;
Every ship brings a word.

Mr. Emerson wrote in his journal, "Hear what the morning says, and believe that."

N2136: RUBIES. There is another pleasing form of the last verse:—

But fire to thaw that ruddy snow,
To break the wine-drop's prison
And give love's scarlet tides to flow,—
That sun is yet unrisen.

MERLIN'S SONG. I. This poem was suggested by the specimens of Welsh Bardic poems which Mr. Emerson took so much pleasure in, and of which he gives specimens in "Poetry and Imagination" (*Letters and Social Aims*, pp. 58, 59), one being not unlike this poem. In the journals are similar passages of which it is hard to tell whether they are from the Bards, or Mr. Emerson cast his own thought in that form,—as the following:—

"I know a song which, though it be sung never so loud, few can hear,—only six or seven or eight persons; yet they who hear it become young again. When it is sung, the stars twinkle gladly, and the moon bends nearer the earth."

MERLIN'S SONG. II. Although there seems entire fitness in printing this song of Merlin, which Mr. Emerson used for the motto to "Considerations by the Way" in the *Conduct of Life*, in connection

with the preceding one, they never appear together in the verse-books.

N2137: THE TEST. This poem, the author's test of scholars in guessing the five poetic teachers of the race, appeared, with no Solution, in the *Atlantic Monthly* for January, 1861. Mr. Emerson did not prize the poems sufficiently to include them in the *Selected Poems*.

SOLUTION. I believe the early rhythmic ventures from which this poem grew in time must interest some readers, and therefore give them in part.

The older one (close to a rehearsal for "Alphonso of Castile") begins thus:—

Clouds on clouds,
Thro' clouds of fire and seas of mist
Burned the globe of amethyst,
Old forces hardly yet subside
Within the bounds of time and tide:
Saurian, snake and dragon can
Slowly ripen into man.
Asia spawned its shepherd race,
Egypt built its granite base;
Then war and trade and clearest clime
Precipitate the man of time,
And forward stepped the perfect Greek
To fight, to carve, to paint, to speak.
Will, wisdom, joy had found a tongue
In the charmed world when Homer sung.

The other beginning runs thus:—

I am the Muse,
Memory's daughter,
I stood by Jove at the first,—
Take me out, and no world had been,
Or chaos bare and bleak.
If life has worth, I give it,
And if all is taken, and I left,
I make amends for all.
Long I wrought
To ripen and refine
The stagnant, craggy lump
To a brain
And shoot it through
With electric wit.
At last the snake and dragon
Shed their scales,
And man was born.
Then was Asia,
Then was Nile,
And at last
On the sea-marge bleak
Forward stepped the perfect Greek;
That will, wit, joy might find a tongue,
And earth grow civil, Homer sung.
Pleased, the planet hummed the tunes, etc.

N2138: This phrase from the Vishnu Purana occurs in "Hamatreya."

N2139: Mr. Emerson, writing to a friend in 1849, spoke with praise of the translation of the "Inferno" by Dr. John Carlyle, the brother of Thomas Carlyle: "I read it lately by night with wonder and joy at all its parts, and at none more than at the nerve and courage which is as essential to the poet as the soldier. Dante locked the door and put the key in his pocket. I believe we only value those who do so."

In the verse-book here follow four lines:—

Silence brooded in my heaven
For seven times seventy and seven,
Prelude of the following song
Well worth such strain to tarry long.

HYMN. Mr. Emerson wrote this hymn, to be sung at the ordination of his successor, the Rev. Chandler Robbins, as pastor of the Second Church of Boston, in 1831. He justly preferred it to one which he had written before, which, though cast aside, has so much that is pleasing that it is now printed in the Appendix. The accepted version of the hymn was not in the May-Day volume, but was included by Mr. Emerson among the *Selected Poems*.

NATURE. II. In one of the earlier verse-books the lines called "The Walk," printed in the Appendix, served for the second division of the poem, and there was a third, which Mr. Emerson took for the motto to "Fate," in *Conduct of Life*, beginning,—

Delicate omens traced in air
To the lone bard true witness bare.

N2140: The thought here expressed is found in the essay "Art," in *Society and Solitude*.

THE ROMANY GIRL. This poem was one of the group contributed by Mr. Emerson to the opening number of the *Atlantic Monthly*, in November, 1857. It was written nearly three years earlier.

The books of the Englishman George Borrow, who combined in a singular manner love of wild human nature and the missionary zeal of an agent of the Bible Society, were attractive to Mr. Emerson. They gave the motive for this poem, at first in the note-book called "Gypsy Song."

N2141: I find in a journal this uncredited line,—

Pâles filles du Nord! vous n'êtes pas mes sœurs.

DAYS. With regard to this poem, which Mr. Emerson once said he thought perhaps his best, the following remarkable entry is from the journal of 1852:—

"I find one state of mind does not remember or conceive of another state. Thus I have written within a twelvemonth verses ('Days') which I do not remember the composition or correction of, and could not write the like to-day, and have only, for proof of their being mine, various external evidences, as the manuscripts in which I find them, and the circumstance that I have sent copies of them to friends, etc. Well, if they had been better, if it had been a noble poem, perhaps it would have only more entirely taken up the ladder into heaven."

To the like purpose in the journal of the following year is this note, headed "The ivory gate":—

"Poppy leaves are strewn when a generalization is made, for I can never remember the circumstances to which I owe it, so as to repeat the experiment or put myself in the conditions."

But this image of the disguised divinities recurs again and again in his writings, as in the poem "May-Day," and twice in the "Lecture on the Times" (*Nature, Addresses and Lectures*, pp. 259, 287), and in "Works and Days" (*Society and Solitude*, p. 168). Dr. Holmes in the interesting chapter on Emerson's Poems, in his Memoir, quotes the latter passage and says: "Now see this thought in full dress, and then ask what is the difference between prose and poetry." He then gives the poem and adds, "Cinderella at the fireside, and Cinderella at the prince's ball!"

"Days" was printed in the first number of the *Atlantic*.

MY GARDEN. Of his Garden Mr. Emerson wrote to his friend Carlyle on May 14, 1846:—

"I, too, have a new plaything, the best I ever had,—a wood-lot. Last Fall I bought a piece of more than forty acres, on the border of a little lake half a mile wide and more, called Walden Pond;—a place to which my feet have for years been accustomed to bring me once or twice a week at all seasons. My lot, to be sure, is on the farther side of the water, not so familiar to me as the nearer shore. Some of the wood is an old growth, but most of it has been cut off within twenty years and is growing thriftily. In these May days, when maples, poplars, oaks, birches, walnut and pine are in their spring glory, I go thither every afternoon, and cut with my hatchet an Indian path through the thicket all along the bold shore, and open the finest pictures.

"My two little girls know the road now, though it is nearly two miles from my house, and find their way to the spring at the foot of a pine grove, and with some awe to the ruins of a village of shanties, all overgrown with

mullein, which the Irish who built the railroad left behind them. At a good distance in from the shore the land rises to a rocky head, perhaps sixty feet above the water. Thereon I think to place a hut; perhaps it will have two stories and be a petty tower, looking out to Monadnoc and other New Hampshire Mountains. There I hope to go with book and pen when good hours come."

"My Garden" is the hill, with a ledge of rock cropping out, these covered by a vigorous growth of oak, on the Lincoln side of Walden, opposite Mr. Emerson's loved pine grove where Thoreau lived for two years. Destructive fires of late years, set by passing railroad trains, have ruined the forest that clothed it.

In his afternoon walks alone in the wood for many years, he strove to "put his woods in song," and to his children, when they went with him, he would often croon a few lines. The resulting verses gradually were separated, and those printed in the Appendix under the title "Walden" are mostly the earlier ones.

"My Garden" was first printed in the *Atlantic Monthly* for December, 1866.

N2142: The second verse in the manuscript, here omitted, was:—

For joy and beauty planted it,
With faerie gardens cheered,
And boding Fancy haunted it
With men and women weird.

N2143: The rising and falling of Walden's waters are curiously independent of dry or wet seasons. Its watershed is small; it is fed by springs at its bottom,—its clear water being more than

one hundred feet in depth. It has no visible outlet, though it is evident that this must be by filtration through a ridge of sand and boulders one or two hundred yards thick, to a swamp, whence the waters run by the "Sanguinetto Brook," as Mr. Channing named it, to "Fairhaven Bay" on the Musketaquid or Concord River.

N2144: This suggests some sentences on the last page of "Nature," in *Essays, Second Series*.

THE CHARTIST'S COMPLAINT. This poem, also appearing in the *Atlantic* of November, 1857, was in the note-books called "Janus," but Mr. Emerson changed its name because the sad laborer, not the poet who can reconcile the two aspects, speaks. The title was more intelligible fifty years ago, when the Chartist agitation in England against privilege was recent.

THE TITMOUSE. The chronicle of the poet's adventure with the titmouse was written in verse while it was still fresh in his mind.

The poem appeared in the *Atlantic Monthly* for May, 1862, and here is the story in the journal:—

March 3, 1862. "The snow still lies even with the tops of the walls across the Walden road, and, this afternoon, I waded through the woods to my grove. A chickadee came out to greet me, flew about within reach of my hands, perched on the nearest bough, flew down into the snow, rested there two seconds, then up again just over my head, and busied himself on the dead bark. I whistled to him through my teeth, and (I think, in response) he began at once to whistle. I promised him crumbs, and must not go again to these woods without them. I suppose the best food to carry would be the meat of shagbarks or Castile nuts. Thoreau tells me that

they are very sociable with wood-choppers, and will take crumbs from their hands."

On the dangers of the situation, if such there were, Mr. Emerson is silent in the journal, as would be natural with him, and perhaps for Art's sake he magnifies them in the poem, but it is to be remembered how like a lion March often comes in in Massachusetts, that the snow was deep, the woods really remote and the walker approaching his sixtieth year. The American reader will hardly find the poem so obscure as did Matthew Arnold, who said that, after all, one does n't quite get at what the titmouse really did for Emerson.

The titmouse was an old friend. Here is a passage from the journal of 1856:—

"The horse taught me something, the titmouse whispered a secret in my ear, and the lespedeza looked at me, as I passed. Will the academicians, in their Annual Report, please tell me what they said?"

THE HARP. "The Harp" formed a part of "May-Day" when that poem first appeared. It followed the passage which tells of the harmonizing by the air of discordant natural sounds at Lake Superior.

The wild wind-harp of the pine, or the artificial one in his study-window played on by the West-wind, gave the music that stirred Emerson.

N2145: The story, from the *Morte d' Arthur*, of Merlin hopelessly confined in a chamber of air, from which he speaks to the passing knights, is given in full in "Poetry and Imagination," in *Letters and Social Aims*.

N2146: Journal, 1861. "What a joy I found and still can find in the Æolian harp; what a youth find I still in Collins's 'Ode to Evening' and in Gray's 'Eton College'! What delight I owed to Moore's insignificant but melodious poetry! That is the merit of Clough's 'Bothie' that the joy of youth is in it!"

N2147: In a lecture on Italy, which Mr. Emerson gave on his return in 1834, he said:—

"On Ash Wednesday the famous Miserere was sung before the Pope and the Cardinals in the Sistine Chapel. The saying at Rome is that the effect of the piece as performed in the Sistine Chapel cannot be imitated, not only by any other choir, but in any other chapel in the world....Of its merits I am quite unable to speak who know nothing of psalmody. And yet even to me it was sweet music and sounded more like an Æolian harp than anything else."

SEASHORE. In July, 1857, Mr. Emerson, induced by Dr. Bartol, took his family to spend two weeks at Pigeon Cove, on Cape Ann. The day after our return to Concord, he came into our mother's room, where we were all sitting, with his journal in his hand, and said, "I came in yesterday from walking on the rocks and wrote down what the sea had said to me; and to-day, when I open my book, I find it all reads as blank verse, with scarcely a change."

Here is the passage from that journal, as he read it to us: July 23. "Returned from Pigeon Cove, where we have made acquaintance with the sea, for seven days. 'T is a noble, friendly power, and seemed to say to me, Why so late and slow to come to me? Am I not here always, thy proper summer home? Is not my voice thy needful music; my breath thy healthful climate in the heats; my touch thy cure? Was ever building like my terraces? Was ever

couch so magnificent as mine? Lie down on my warm ledges and learn that a very little hut is all you need. I have made this architecture superfluous, and it is paltry beside mine. Here are twenty Romes and Ninevehs and Karnacs in ruins together, obelisk and pyramid and Giant's Causeway; here they all are prostrate or half piled. And behold the sea, the opaline, plentiful and strong, yet beautiful as the rose or the rainbow, full of food, nourisher of men, purger of the world, creating a sweet climate and in its unchangeable ebb and flow, and in its beauty at a few furlongs, giving a hint of that which changes not, and is perfect."

SONG OF NATURE. This joyful and eminently characteristic poem seems to have been written by Mr. Emerson in 1859. His belief in the sure advance of life through the ages he had expressed long before, but now, though his belief needed no confirmation, the new and interesting lights on the subject and examples everywhere adduced by Darwin and his followers were inspiring to him, and here found expression.

N2148: There are in the manuscript varying expressions in the foregoing poem which are interesting.

In the first, "the gulf of space" originally was "the swallowing space."

In the second, the last line ran,—

In death new-born and strong.

In the fifth verse, Mr. Emerson hesitated long, as the various trials show, before he changed his line,

My apples ripened well,

by substituting "gardens" for the more lively image.

N2149: Readers who wish nothing unsolved are much troubled by this verse, but Nature is not statistical or immediately intelligible. Like the gods she "says all things by indirection." When the young knight was angered by Merlin's vagueness, Tennyson makes the wise man answer,—

"Know ye not, then, the riddling of the Bards?
Confusion, and illusion, and relation,
Elusion, and occasion, and evasion."

Nor can the editor say with authority who was meant in the third line of the next verse. Its very ambiguity was probably intentional and makes it harmonize better with the preceding verse. If it points to Egypt, some readers have suggested Moses, but Mr. Emerson would have been far more likely to refer to one of the great Alexandrian Neo-platonists.

But Italy is more strictly

Over against the mouths of Nile,

and thus the genius of classic Rome or of the Italian Renaissance, without choosing a representative, might have been indicated. If a choice must be made, the "Solution" would point to Dante. It seems remarkable that in that poem Plato, "the purple ancient... of the richest strain,"¹⁰⁴ is not named, for the author owed far more to him than to Swedenborg.

¹⁰⁴ Mr. Emerson thus named him in his review of Carlyle's *Past and Present*. See "Papers from the Dial," in the volume *Natural History of Intellect*.

N2150: In the note-book, "Forces," 1863, is this entry:—

The sun has lost no beams,
The earth no virtues,
Gravity is as adhesive,
Electricity as swift, heat as expansive, light as joyful,
Air as virtuous, water as medicinal, as in the beginning.
And the magazine of thought and the heart of morals
Are as rich and omnipotent as at the first day.

TWO RIVERS. This, perhaps the most musical of the poems, gives opportunity to show Mr. Emerson's later method. The thought came on the river-bank, whispered by the ripples, and very likely was written there; if not, on his return to his study. It mainly gave the form, for "verse must be alive and inseparable from its contents." Thereafter, when the days came, as Herrick said,

"That I
Fitted am to prophesy,"

he repeated or chanted the lines to himself until the right word was in an instant given to replace the awkward phrase with redundant syllables, and the polish and the music came to match the thought. Here is the poem on the day of its birth, in the early summer of 1856:—

"Thy voice is sweet, Musketaquid, and repeats the music of the rain,
but sweeter is the silent stream which flows even through thee, as thou
through the land.

"Thou art shut in thy banks, but the stream I love flows in thy water, and flows through rocks and through the air and through rays of light as well, and through darkness, and through men and women.

"I hear and see the inundation and the eternal spending of the stream in winter and in summer, in men and animals, in passion and thought. Happy are they who can hear it."

I see thy brimming, eddying stream
And thy enchantment,
For thou changest every rock in thy bed
Into a gem,
All is opal and agate,
And at will thou pavest with diamonds:
Take them away from the stream
And they are poor, shreds and flints.
So is it with me to-day.

This rhapsody does not gain by the attempt to reduce part of it to rhyme, which occurs later in the same journal:—

Thy murmuring voice, Musketaquid,
Repeats the music of the rain,
But sweeter rivers silent flit
Through thee as thou through Concord plain.
Thou in thy banks must dwell,
But
The stream I follow freely flows
Through thee, through rocks, through air as well,
Through light, through men it gayly goes.

But Mr. Emerson kept the verses by him nearly two years before, in their perfected form, he gave them to the *Atlantic Monthly* for January, 1858.

N2151: From the first, the image of the stream applied to thought and life appears in the prose and the poems, as in the "Over-Soul" (p. 268), in the first series of *Essays*, in "Nature" (pp. 178, 179), in the second series, and in *Nature, Addresses and Lectures* (pp. 26, 27). In the poem "Peter's Field," in the Appendix, the poet says,—

Far seen, the river glides below,
Tossing one sparkle to the eyes.
I catch thy meaning, wizard wave;
The River of my Life replies.

N2152: The words of Jesus when he talked with the Samaritan woman at the fountain, were, of course, in the author's mind.

WALDEINSAMKEIT. Possibly the decision to use for *Forest Solitude* an equivalent, outlandish in the strict and respectful sense, may have been influenced by the fact that to woods in the region of Walden more than to others, Mr. Emerson went for communion with Nature, and the German word had a kindred sound. And yet the first two lines tell the story that the poem was begun during a visit to Mr. John M. Forbes at the beautiful island of Naushon, in the summer of 1857. The poem was published in the *Atlantic Monthly* for October of the following year.

N2153: "Allah does not count the days spent in the chase" was a favorite quotation, but the sea always suggested to Emerson

illimitable time. Mrs. Helen Hunt Jackson relates that when she was a fellow guest with Mr. Emerson at the house of a friend in Newport, he quietly asked, "Are there any clocks in Newport?" and the meaning did not instantly occur to the hearers.

N2154: Journal, 1845. "The wood is soberness with a basis of joy." Immediately under this is written,

Sober with a fund of joy.

TERMINUS. Terminus was to the Romans the deity presiding over boundaries and landmarks.

In the last days of the year 1866, when I was returning from a long stay in the Western States, I met my father in New York just starting for his usual winter lecturing trip, in those days extending beyond the Mississippi. We spent the night together at the St. Denis Hotel, and as we sat by the fire he read me two or three of his poems for the new *May-Day* volume, among them "Terminus." It almost startled me. No thought of his ageing had ever come to me, and there he sat, with no apparent abatement of bodily vigor, and young in spirit, recognizing with serene acquiescence his failing forces; I think he smiled as he read. He recognized, as none of us did, that his working days were nearly done. They lasted about five years longer, although he lived, in comfortable health, yet ten years beyond those of his activity. Almost at the time when he wrote "Terminus" he wrote in his journal:—

"Within I do not find wrinkles and used heart, but unspent youth."

N2155: Mr. Emerson wrote to his brother William in 1838,—

"All Emersons are slender. There are only two or three sound stocks of that excellent tree."

Journal, 1859. "Shall I blame my mother, whitest of women, because she was not a gypsy and gave me no swarthy ferocity? Or my father because he came of a lettered race and had no porter's shoulders?"

N2156: There are in the verse-book lines in the last stanza which Mr. Emerson omitted in the poem. One pair, containing the nautical image, follows the line in the text,—

Obey the voice at eve obeyed at prime,

with

'Is the sky dark?' it saith, 'More near will stand
The pilot with unerring hand.'

Another pair drop this image, for home surroundings, thus:—

Obey the voice at eve obeyed at prime,
And hide myself among my thrifty pears,
Each fault of mine masked by a growth of theirs.

THE NUN'S ASPIRATION. This poem is but a metrical rendering of some fine and some touching passages from the journal of Miss Mary Moody Emerson, the sister of Mr. Emerson's father. She was a person of great devoutness, the inspirer, the spur and the constant critic of her nephews, whom she loved and secretly admired. Mr. Emerson gives an account of her remarkable life

in the volume *Lectures and Biographical Sketches*. In Mr. Cabot's *Memoir of Emerson* are many extracts from the letters that passed between her and her nephews.

N2157: In spite of Miss Emerson's temperamental eccentricities, of which she was aware, and alluded to them in her journal, she was loved by her nephews, and of her Mr. Emerson said: "She gave high counsels. It was the privilege of certain boys to have this immeasurably high standard indicated to their childhood; a blessing which nothing else in education could supply."

APRIL. These verses first appeared among the *Selected Poems* which Mr. Emerson published in 1876. A pleasant little description of the bewitching influences of April, in a letter written to Margaret Fuller in 1840, was transcribed by him into a note-book and perhaps was the foundation of the poem.

MAIDEN SPEECH OF THE ÆOLIAN HARP. These lines accompanied Mr. Emerson's New Year's present to his daughter Edith and her husband, Colonel William H. Forbes, in 1868.

N2158: His own delighted use of the wind-harp is shown in this fragment of an early lecture:—

"Stretch a few threads over an Æolian harp and put it in the window, and listen to what it says of the times, and of the heart of Nature. You shall not believe that the miracle of Nature is less, the chemical power worn out."

CUPIDO. This, as well as the three poems which precede it, was first published in *Selected Poems*. It seems to have been written in 1843.

THE PAST. No trace of the history of this poem remains.

N2159: In the first pages of the essay on Memory, in *Natural History of Intellect*, it is said of remorseful recollection of the Past:—

“Well, that is as it should be. That is the police of the Universe: the angels are set to punish you, so long as you are capable of such crime. But...the day comes when you are incapable of such crime. Then you suffer no more, you look on it as heaven looks on it, with wonder at the deed, and with applause at the pain it has cost you.”

THE LAST FAREWELL. Mr. Emerson printed his brother Edward's sad farewell to all that was dear to him, six years after his death, in the first number of the *Dial*.

N2160: Edward was born in 1805, but though two years younger than Waldo, the latter used to say that they were really very near together, as he was near the foot of his classes, and Edward at the head of his. Those who remembered him said that he was strikingly handsome, a born scholar, more brilliant in his studies and his speech than Waldo, and a favorite in society. All through college he was easily first scholar. Though of delicate constitution, his conscience and his ambition would not allow him to spare himself. Daniel Webster, in whose office he studied law, recognized his powers and his fine character, and committed to him the charge of his two sons. Yet Edward heaped other tasks upon himself, to free himself from debt incurred in the voyage to Europe for his health, until his reason for a time gave way under the strain. This he soon regained, but his mainspring seemed broken. Advised to go to a milder climate, he took a clerkship in a business house in Porto Rico, and worked uncomplainingly there for a few years. Friends

who saw his cheerful demeanor reported that he was in the way of recovery of his vigor, but it appears that he himself knew that, as he wrote, "the arrow of the angel had gone too deep." A verse telling of a private grief, which Mr. Emerson omitted, may now be restored.

IN MEMORIAM, E. B. E. The Old North Bridge, across which the opening volleys of the Revolutionary War were fired in a battle whose field extended from the Musketaquid to the Charles River, was close behind the Manse built by Rev. William Emerson, the young patriot minister of Concord, and there his grandsons William, Ralph Waldo, Edward and Charles had spent many pleasant days in boyhood. (See the poems "Dirge" and "Peter's Field.") The two British soldiers killed at the first fire lie buried where they fell.

N2161: The expression in this line is borrowed from Milton and used by Mr. Emerson more than once in his writings.

ELEMENTS AND MOTTOES

The thirteen poems which follow, beginning with "Experience," were selected by Mr. Emerson from the mottoes of the Essays, of which they—all but two—bear the names, for publication in *May-Day and Other Pieces* in 1867. He there called the group "Elements." The motto of the essay on Behavior he called "Manners," the essay of that name having no original motto, but one from Ben Jonson. To the motto of "The Over-Soul" he gave the title "Unity."

It has seemed to the editor that the readers of the Poems would be glad to have the other mottoes which Mr. Emerson gave to his chapters included in this volume. They therefore are printed, with a few exceptions, after the thirteen which the author preferred. The exceptions are as follows: the motto of Self-Reliance is found where Mr. Emerson placed it among the Quatrains as "Power;" the motto to "The Poet," with the exception of its first two lines, is a part of the long poem of that name in the Appendix; most of the lines of "Fate" belong among the fragments on "The Poet," in the Appendix, and the last four lines form the ending of the poem "Fate;" the motto to "Considerations by the Way" seemed better placed with the "Song of Merlin." The second motto of

"Character" and that of "Beauty" are portions respectively of the "Ode to Beauty" and of "In Memoriam, E. B. E." The titles "Promise" and "Caritas" seemed appropriate to the mottoes respectively of "Nominalist and Realist" and "New England Reformers." "Love" had only a verse from the Koran as motto. The Essays in the volumes which followed *Conduct of Life* had no mottoes in Mr. Emerson's lifetime, and, with Mr. Cabot's sanction, I supplied these for *Lectures and Biographical Sketches*, in the Riverside Edition, from fragments of verse, never published by Mr. Emerson, which were printed in the Appendix. I have now ventured to do the same for *Society and Solitude* and *Letters and Social Aims*.

N2162: Journal, 1840. "I read to-day in Ockley [History of the Saracens] a noble sentence of Ali, son-in-law of Mahomet: 'Thy lot or portion of life is seeking after thee; therefore be at rest from seeking after it.'"

See also "The Over-Soul" (*Essays, First Series*, p. 293).

N2163: Compare the quatrain "Northman."

N2164: The first six lines of this motto are from "The Poet" (see Appendix).

N2165: This poem in the verse-book begins,—

Ah me! can maxims educate.

There is in "Fate" (*Conduct of Life*, p. 44) a passage on the necessity for the great to be impressionable.

N2166: In the notes to "Friendship," *Essays, First Series*, p. 412, are two passages on ideal friendship from letters by Mr. Emerson.

N2167: This poem sheds light on "Uriel" and on "Brahma." The essay on Circles, especially pages 317–318, contains much to the same purpose,—the beneficent compensations in Morals, as in Nature. Had Mr. Emerson ever resorted to italics, the use of them in the word "living" would have helped the reader in the first line, which is condensed to the last point. Thy prayers are concerned with a Heaven which is alive, is the meaning. This is shown in the first rhapsody in the verse-book:—

Heaven is alive;
Self-built and quarrying itself,
Upbuilds eternal towers;
Self-commanded works
In vital cirque
By dint of being all;
Its loss is transmutation.
Fears not the craft of undermining days,
Grows by decays,
And, by the famous might that's lodged
In reaction and recoil,
Makes flames to freeze and ice to boil,
And thro' the arms of all the fiends
Builds the firm seat of Innocence.

N2168: Mr. Emerson's note-books are full of verses about the joyful Seyd (or Said) seeking beauty in Nature and man. These may be found in the Appendix, in "Fragments on the Poet." A few of these were taken by him for this motto.

N2169: In "Love," *Essays, First Series*, pp. 176, 177, is a passage which these lines recall.

N2170: In a letter to a near friend, written in 1841, Mr. Emerson speaks of himself as "an admirer of persons. I cannot get used to them; they daunt and dazzle me still....Blessed be the Eternal Power for those whom fancy even cannot strip of beauty, and who never for a moment seem to me profane."¹⁰⁵

N2171: Mr. Emerson thus changed the title of the motto of "The Over-Soul."

N2172: See "Fate" (p. 21 in *Essays, First Series*) and also the poems "Nemesis" and "Voluntaries."

N2173: Compare the passage in the Address to the Divinity Students (*Nature, Addresses and Lectures*, p. 121).

¹⁰⁵ *Letters to a Friend*, edited by Charles Eliot Norton. Boston: Houghton, Mifflin & Co., 1899.

QUATRAINS AND TRANSLATIONS

QUATRAINS. Mr. Emerson's Oriental studies may have given him the taste for this sort of verse. In the essay on Persian Poetry he says:—

"The Persians have epics and tales, but, for the most part, they affect short poems and epigrams. Gnostic verses, rules of life conveyed in a lively image...addressed to the eye and contained in a single stanza, were always current in the East." He gives among other specimens of these gnostic poems this:—

"The secret that should not be blown
Not one of thy nation must know;
You may padlock the gate of a town,
But never the mouth of a foe."

This may have suggested the quatrain "Hush!" Certainly the form of the specimens he gives is suggestive. Most of the Quatrains seem to have been written between 1850 and 1860; one or two much earlier.

N2174: In the journal of 1850, Mr. Emerson speaks of the necessity of the great man being highly impressionable, and adds, "He obeys the main current,—that is all his secret, the main current is so feeble a force as can be felt only by bodies delicately poised. He can orient himself. In the woods, I have one guide, namely, to follow the light,—to go where the woods are thinnest; then at last I am sure to come out. So he cannot be betrayed or misguided, for he knows where the north is, knows painfully when he is going in the wrong direction."

N2175: Compare *Nature, Addresses and Lectures*, p. 30, and *Conduct of Life*, p. 294.

N2176: Journal, July, 1840. "Go to the forest, if God has made thee a poet, and make thy life clean and fragrant as thy office.

True Brahmin, in the morning meadows wet,
Expound the Vedas in the violet.

Thy love must be thy art....Nature also must teach thee rhetoric. She can teach thee not only to speak truth, but to speak it truly."

N2177: "Frozen leaves or grouse's breast" was the early form.

N2178: Journal, 1853. "The Vikings sang, 'the force of the storm is a help to the arm of our rowers; the hurricane is in our service; it carries us the way we would go.'"—Thierry's *Norman Conquest*.

N2179: These lines date from May 1, 1838.

N2180: This quatrain is Mr. Emerson's tribute to the upright citizen and lawyer, Samuel Hoar, the "Squire" of Concord, and father of his friends, Judge E. R. Hoar and Miss Elizabeth Hoar. Mr. Emerson's sketch of his life is in *Lectures and Biographical Sketches*.

N2181: Compare, as to Nature's ever new allurements, *Essays, Second Series*, p. 192.

N2182: The last two lines are from an Oriental source, and are also quoted in *Conduct of Life*, p. 10.

N2183: The motto of "Self-Reliance."

N2184: See *Essays, First Series*, p. 148; also "Demonology," in *Lectures and Biographical Sketches*.

N2185: Compare the ending of the verses in the Appendix, beginning,—

Love

Asks nought its brother cannot give.

Note-book. "It creeps where it cannot go, it creeps under the snows of Scandinavia, and Lofn is as mighty a divinity in the Norse Edda as Camadeva in the red vault of India."

N2186: The last two lines are a rendering of a quotation from a sermon by Caleb Vines, a Puritan, on "Caleb's integrity in following the Lord fully," preached at St. Margaret's, Westminster, before the Honourable House of Commons, November 30, 1642.

N2187: A Latin rendering of a Greek saying was spoken of by Mr. Emerson as the source of the quatrain. One asks a neighbor, "But are you not then my friend?" "*Usque ad aras*," is the reply—*As far as the altars*.

N2188: When Dante met his friend Casella, the beautiful singer, in Purgatory, he begged him to sing. When Casella began, *Amor che nella mente mi ragiona*, the souls all flocked to hear.

N2189: The title signifies, "They enjoy a tearless age."

Mr. Emerson held the poet to his office of "joy-giver and enjoyer," as he says in the poem "Saadi." It is the more remarkable that he admits Swedenborg as a poet in the "Solution," but it is on the score of his symbolism.

TRANSLATIONS. Among the poems in his first volume, Mr. Emerson placed two translations from Hafiz, through the German, of course, less pleasing than those here given. These were omitted by him from the *Selected Poems*, and by Mr. Cabot in the Riverside Edition. They are not restored here, because of their length and because the space is needed for restored and early poems, and interesting fragments. In his preface to the American edition of Saadi's *Gulistan*, translated by Gladwin, are some of Mr. Emerson's translations of Persian poetry, and also in the essay on that subject in *Letters and Social Aims*.

N2190: Mr. Joel Benton,¹⁰⁶ writing of the quatrains and the translations which follow, and comparing the quatrain "Hafiz" with this rendering, well says,—

¹⁰⁶ *Emerson as a Poet*. By Joel Benton. New York: M. L. Holbrook & Co., 1883.

"If the translation here seems (as it evidently does) a little more like Emerson than it does like Hafiz, the balance is more than preserved by his steeping his own original quatrain in a little tincture of the wine and spirit of Oriental thought. When he translated Hafiz, he was probably thinking of his own workmanship; when he described him, he was simply absorbed in the *milieu* of the Persian poet."

Mr. Benton says also, "What Goethe says of the Spanish poet Calderon (I quote Lord Houghton's forcible translation) serves equally well if you substitute for his name Emerson's:—

"Many a light the Orient throws
O'er the midland waters brought;
He alone who Hafiz knows
Knows what Calderon has thought."

This suggests that it very likely was Goethe who drew Emerson's attention to Hafiz.

APPENDIX

THE POET. This poem, called in its early form "The Discontented Poet, a Masque," was begun as early as 1838, probably earlier. It received additions through several years and was much improved, but Mr. Emerson never completed it.

"The Poet" seems to have been written parallel, so to speak, with the lectures on the same theme which are condensed into the opening essay in the *Second Series*. It was written in the years when Emerson, who saw God and Man and Nature as a poet in the highest sense sees them, was struggling through impediments towards a fitting expression of his vision or thought in verse. He soon discarded the first title and such morbid lines as had been written during a somewhat unrestful period. He felt, as he told a friend, that these desires contained the promise of their fulfilment. The poem truly pictures his own method of seeking inspiration, sitting under the pines in Walden woods by day and walking alone under the stars by night,—listening always. The stanza beginning,—

The sun set, but set not his hope

(used as the motto for "Character") and that preceding it, show his happy patience, secure that his time would come.

"The Poet" as here printed has a reasonable unity, but around it was a system of satellite pieces on this favorite topic, of a later date and more musical. In these, the poet is called Saadi, or, as often more convenient for metre, Said or Seyd.

Dr. Holmes was greatly interested in these poems. I quote from his Memoir of his friend:—

"If any doubter wishes to test his fitness for reading them, and if the poems already mentioned are not enough to settle the question, let him read the paragraph of 'May-Day,' beginning,—

'I saw the bud-crowned Spring go forth,'

'Seashore,' the fine fragments in the Appendix to his published works, called, collectively, 'The Poet,' blocks bearing the mark of poetic genius, but left lying round for want of the structural instinct, and last of all that which is, in many respects, first of all, the 'Threnody.'"

N2191: Journal, 1839. "The poet is a namer. His success is a new nomenclature."

"Though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency because for the moment it symbolized the world to the first speaker and to the hearer."—"The Poet," *Essays, Second Series*.

N2192: In his Introduction to Professor W. W. Goodwin's revision of Plutarch's *Morals*, Mr. Emerson quotes Plutarch's

sentence: "Were there not a sun, we might, for all the other stars, pass our days in the 'Reverend Dark,' as Heracleitus calls it."

N2193: Compare the last sentence in "Man the Reformer," *Nature, Addresses and Lectures*.

N2194: Mr. Emerson once spoke of his joy when, as a boy, he "caught the first hint of the Berkeleian philosophy. I could see that there was a Cause behind every stump and clod, and by the help of some fine words could make every old wagon and wood-pile and stone wall oscillate a little and threaten to dance; nay, give me a fair field, and the selectmen of Concord and the Reverend Pound-me-down himself began to look unstable and vaporous." He said in a lecture, of Shakspeare, "He is the chosen closet companion, who can, at any moment, by incessant surprises, work the miracle of mythologizing every fact of the common life."

N2195: In the essay on Domestic Life, *Society and Solitude*, Mr. Emerson dwells on the inestimable advantage of comparative poverty to youth.

N2196: Journal, 1838. "The intellectual nomadism is the faculty of Objectiveness or of Eyes which everywhere feed themselves. Who hath such eyes, everywhere falls into true relations with his fellow men. Every man, every object is a prize, a study, a property to him, and this love smooths his brow, joins him to men and makes him beautiful and beloved in their sight. His house is a wagon, he roams through all latitudes as easily as a Calmuc. He must meantime abide by his inward law as the Calmuc by his Khan."—See "History," *Essays, First Series*, pp. 22, 23.

N2197: The correspondences and harmonies are dwelt on in other poems, as in "Merlin," II., and in the passage in the second "Woodnotes"—

Come learn with me the fatal song, etc.

N2198: Compare the essay on the Poet, in *Essays, Second Series*, pp. 25 and 39.

N2199: See in *Conduct of Life*, "Beauty," p. 304.

N2200: This stanza was used by Mr. Emerson as motto for the essay on Character.

N2201: Journal, 1837. "To-night I walked under the stars through the snow, and stopped and looked at my far sparklers and heard the voice of the wind, so slight and pure and deep as if it were the sound of the stars themselves revolving."

1841. "Last night a walk to the river...and saw the moon in the broken water, interrogating, interrogating."

N2202: "1838, 24 June, Sunday. Forever the night addresses the imagination, and the interrogating soul within or behind all its functions, and now in the summer night, which makes the earth more habitable, the more. Strange that forever we do not exhaust the wonder and meaning of these stars, points of light merely, but still they speak and ask and warn, each moment with new mind."

N2203: "The power of music, the power of poetry, to unfix and as it were clap wings to solid nature, interprets the riddle of Orpheus."—"History," *Essays, First Series*, p. 31.

N2204: In "The Transcendentalist" (*Nature, Addresses and Lectures*, pp. 341–343) the eager youth who seem to themselves born out of time are described.

N2205: Some sentences in the concluding passage of the essay on the Poet recall this stanza picturing the touching loyalty of the family to the man of genius.

N2206: Composure is the first virtue of man, as modesty is that of woman.

N2207: The opening passage of Mr. Emerson's first book, *Nature*, shows the inspiration which he found in the heavenly bodies, and the lesson to be found in their beauty and their ordered motion. Every astronomical fact interested him.

N2208: The doctrine of the Universal Mind.

N2209: Compare the passage in Mr. Emerson's Address to the Divinity Students beginning, "The perception of this law of laws awakens in the mind a sentiment," etc.

In the journal for 1840, he wrote thoughts which occur in the last two stanzas: "The moon keeps its appointment—will not the good Spirit? Wherefore have we labored and fasted, say we, and thou takest no note? Let him not take note, if he please to hide,—then it were sublime beyond a poet's dreams still to labor and abstain and obey, and, if thou canst, to *put the good spirit in the wrong*. That were a feat to sing in Elysium, on Olympus, by the waters of life in the New Jerusalem."

The last seven lines of the poem were, however, written in 1831.

FRAGMENTS ON THE POET AND THE POETIC GIFT. What Dr. Holmes says in his chapter on the Poems is especially true of these fragments: "The poet reveals himself under the protection of his imaginative and melodious phrases,—the flowers and jewels of his vocabulary."

The first part of this poem was written in 1845; from it Mr. Emerson took the motto for "Beauty," the first ten lines of which followed

At court he sat in the grave Divan,

and the rest of the motto followed

And etiquette of gentillesse.

N2210: In the essay on Inspiration, in *Letters and Social Aims*, after quoting what the poet Gray said of the Æolian harp, Mr. Emerson adds:—

"Perhaps you can recall a delight like it, which spoke to the eye, when you have stood by a lake in the woods in summer, and saw where little flaws of wind whip spots or patches of still water into fleets of ripples,—so sudden, so slight, so spiritual, that it was more like the rippling of the Aurora Borealis at night than any spectacle of day."

N2211: In his journal of 1842, he wrote under the heading "To-day":—

"But my increasing value of the present moment, to which I gladly abandon myself when I can, is destroying my Sunday respects, which always, no doubt, have some regard to the State and conservatism. But when to-day is great I fling all the world's future into the sea."

Mr. Emerson, from childhood to age, had reverence for worship, and for public worship, but as he grew in mind and spirit he felt himself cramped by creeds and forms. He found he could worship to more purpose in solitude and in the presence of Nature. He always gladly heard a true preacher, and in his old age, when his critical sense was dulled and the passing Day had fewer gifts for him, he liked to go to the Concord church, were it only for association's sake.

N2212: Hassan the camel-driver was, without doubt, Mr. Emerson's sturdy neighbor, Mr. Edmund Hosmer, for whom he had great respect. The camels were the slow oxen, then universally used for farm-work, with which Mr. Hosmer ploughed the poet's fields for him. Compare what is said of manual labor in *Nature, Addresses and Lectures*, pp. 236–238.

N2213: Journal, 1855. "What I said in one of my Saadi scraps of verse, I might say in good sooth, that—

Thus the high Muse treated me,
Directly never greeted me, etc.

My best thought came from others. I heard in their words my own meaning, but a deeper sense than they put on them: and could well and best express myself in other people's phrases, but to finer purpose than they knew."

The thought of the last five lines is given more fully in "Art" (*Essays, First Series*, pp. 360, 361).

N2214: Sun and moon and everything in Nature are symbols, seeds which quicken in their interpretation, which the poet finds for mankind.

N2215: These lines are a more pleasing version of the motto to the essay on Fate, in *Conduct of Life*, with two introductory lines, and without the less poetical ending lines which were used by Mr. Emerson in the poem "Fate."

N2216: The last verse is the motto to "Intellect" in *Essays, First Series*.

N2217: This in the verse-book is called "Terminus."

N2218: These lines appear to have been part of a poem called "Bacchus" that was never completed, referred to in the note to "Bacchus."

N2219: This thought is more fully stated in "Fate" (*Conduct of Life*, p. 26) and in "Self-Reliance" (*Essays, First Series*, p. 71).

N2220: See "Inspiration," *Letters and Social Aims*, p. 296.

N2221: These lines, it is seen in one of the verse-books, describe the true poet; he re-creates, by showing what creation signifies, and thoughts are the seed he sows.

N2222: "Every thought which genius and piety throw into the world, alters the world."—"Politics," *Essays, Second Series*.

N2223: Asmodeus was an evil spirit. He is mentioned in the Book of Tobit in the Apocrypha. Students of the Black Art held that demons could be kept out of mischief by setting them at hopeless tasks, like making ropes out of sand. The braid-like effect of the wave-markings in shoal water suggested the idea. Mr. Emerson always found it hard to make a tissue out of the thoughts which came to him—he spoke of them once as “infinitely repellent particles.”

N2224: FRAGMENTS ON NATURE AND LIFE. In the leading essay in *Natural History of Intellect* is this passage on the Greek symbolizing of Nature in the god Pan:—

“Pan, that is, All. His habit was to dwell in mountains, lying on the ground, tooting like a cricket in the sun, refusing to speak, clinging to his behemoth ways. He could intoxicate by the strain of his shepherd’s pipe,—silent yet to most, for his pipes make the music of the spheres, which, because it sounds eternally, is not heard at all by the dull, but only by the mind. He wears a coat of leopard spots or stars. He could terrify by earth-born fears called *panics*. Yet was he in the secret of Nature and could look both before and after. He was only seen under disguises, and was not represented by any outward image; a terror sometimes, at others a placid omnipotence.”

N2225: This was originally in the rough draft of *Monadnoc*, in which is the image,—

Of the bullet of the earth
Whereon ye sail, etc.

N2226: Another version of a passage in “May-day.”

This little note in praise of the animal creation is from one of the verse-books:—

See how Romance adheres
To the deer, the lion,
And every bird,
Because they are free
And have no master but Law.
On the wild ice in depths of sea,
On Alp or Andes' side,
In the vast abyss of air,
The bird, the flying cloud,
The fire, the wind, the element,—
These have not manners coarse or cowed,
And no borrowed will,
But graceful as cloud and flame
All eyes with pleasure fill.

N2227: Journal, 1853. "At Nahant the eternal play of the sea seems the anti-clock, or destroyer of the memory of time."

N2228: These verses were probably written while Mr. Emerson was visiting Dr. Ezra Ripley (his step-grandfather, always kind and hospitable) at the Manse, after his return from Europe in 1833. Opposite the house is a pasture-hill giving a fine view of the great meadows to the eastward, and, on the western horizon, of some of the mountains on the New Hampshire line.

N2229: Journal, 1860. "We can't make half a bow and say, I honor and despise you. But Nature can: she whistles with all her winds and—does as she pleases."

N2230: LIFE. See the Address to the Divinity Students (*Nature, Addresses and Lectures*, p. 124).

N2231: The Lemures were the household ghosts, and the Lares the household divinities of the Latins.

N2232: See "Friendship" (*Essays, First Series*, pp. 191, 211).

N2233: The same thought is in the poem "Rubies."

N2234: The first four lines are in "The Dæmonic Love."

N2235: These verses are written in the older verse-book on the same page with "Eros."

N2236: "Statements of the infinite are usually felt to be unjust to the finite, and blasphemous. Empedocles undoubtedly spoke a truth of thought, when he said, 'I am God;' but the moment it was out of his mouth it became a lie to the ear; and the world revenged itself for the seeming arrogance by the good story about his shoe" ("The Method of Nature," *Nature, Addresses and Lectures*, p. 198). See also *Conduct of Life*, p. 26. Empedocles, the common people believed, threw himself into the crater of Mount Ætna that no trace of his death might appear, and it be supposed that he was translated. Hence, when the volcano cast up his brazen sandal, they were pleased.

N2237: In the verse-book, Mr. Emerson gives to these lines the title "Rex," but "The Related Man" might have been better. He delighted in such, as much when he observed them (not, however, filling the dream of high, poetic maids, or consorting with bards

and mystics) in the grocery, or insurance-office of the village, as when he saw the master minds of the growing Republic in cities, East or West.

N2238: THE BOHEMIAN HYMN. This poem appears but once in the verse-books, and no traces of its composition remain, nor is it dated. But from the handwriting it must have been written before 1840, and the internal evidence is convincing that it was written by Mr. Emerson.

Compare a passage in *Representative Men*, pp. 61, 62.

N2239: GRACE. The *Memoir of Margaret Fuller Ossoli* was written by her friends, Rev. James Freeman Clarke, Rev. William Henry Channing and Mr. Emerson. Mr. Emerson, writing to Mr. Channing about their joint work, referred to this poem thus:—

"For your mottoes to your chapter, I saw that the first had the infinite honor done it of being quoted to Herbert! The verses are mine,—'Preventing God,' etc.,—so I strike them out."

The poem was published in the *Dial* of January, 1842.

N2240: INSIGHT. This title was given by the editor. The verses have none, and perhaps could be better named. Mr. Emerson wrote the first line also in these forms:—

Rule that by obedience grows,

and

Power which by service grows.

N2241: PAN. Mr. Emerson seems to have considered other titles, as "Pantheos," and "Divine Afflatus." He wrote in the second line "the breath of God," but afterwards decided to use the classical image. By the parables of the divine music played through human pipes, and of the tide of spirit inundating mankind, he teaches the ancient doctrine of Inspiration. In a note-book of 1830 he wrote, "Heracleitus said, 'The senses are canals through which we inhale the divine reason.'" Everywhere in the *Essays* the *over-soul* is taught, especially in the essay of that name.

N2242: MONADNOC FROM AFAR. It is strange that Mr. Emerson never printed this little poem. It probably was written not much later than "Monadnoc."

N2243: SEPTEMBER. These verses have never been printed in full except by Mr. Channing in his *Thoreau, the Poet Naturalist*. The text there varies slightly from that here selected as the best version from the journals.

N2244: OCTOBER. See *Society and Solitude*, p. 298.

PETER'S FIELD. This poem on the memories and associations of the field by the Concord River, where Mr. Emerson and his brothers walked in youth, must be of earlier date than the "Dirge." It has two verses in common with this, here bracketed.

Here is another account of the brothers' joys,—

We sauntered amidst miracles,
We were the fairies of the fells,
The summer was our quaint bouquet,
The winter-eve our Milky Way;

We played in turn with all the slides
In Nature's lamp of suns and tides;
We pierced all books with criticism,
We plied with doubts the catechism,
The Christian fold,
The Bible old—

N2245: Among the more youthful pieces at the end of this volume is another poem on the River and its associations.

N2246: MUSIC. The present editor obtained Mr. Cabot's permission to include this among the minor poems in the Appendix to the posthumous edition of the Works in 1883, even though Dr. Holmes made some protest against allowing the "mud and scum of things" to have a voice. At the celebration of the recent centenary of Mr. Emerson's birth, it was pleasant to see that the poem had become a favorite, even with children, and was often quoted.

N2247: THE WALK. Mr. Emerson, after a happy walk with Thoreau, wrote in his journal in 1857: "To Nero advertising for a new pleasure, a walk in the woods should have been offered. 'T is one of the secrets for dodging old age."

N2248: COSMOS. These verses have no title in the verse-books. "Cosmos" is given by the editor. They were originally trials for a "Song of Nature,"—Nature is speaking. The May element claimed the later verses, though their sequence was never made out, the first divisions harmonizing fairly, but the last two hopelessly dislocated, though they have a certain charm.

N2249: THE MIRACLE. This poem was written at about the same period with "My Garden," "Boston" and "Waldeinsamkeit," between 1857 and 1865.

N2250: THE WATERFALL. In addition to his Walden wood-lots, Mr. Emerson bought one on the edge of Lincoln, for the sake of a miniature waterfall in a little brook, the outlet of Flint's Pond. Mr. Thoreau showed him additional charms, certain shrubs and flowers not plentiful in Concord that grew on its banks,—veratrum with its tropical growth, trillium, jack-in-the-pulpit, yellow violets, and the hornbeam, arrow-wood and a bush of mountain laurel. It was a wonderful resort for the various kinds of thrushes.

WALDEN. This poem represents the early form of "My Garden." As years went on, verses were added, and at last the groups became distinct.

N2251: THE ENCHANTER. "Shakspeare is the only biographer of Shakspeare; and even he can tell nothing, except to the Shakspeare in us, that is, to our most apprehensive and sympathetic hour."—*Representative Men*, p. 208.

N2252: GOETHE. Mr. Emerson read Goethe's works through, largely out of his love for Carlyle, who constantly praised Goethe to him. Writing to his friend, in April, 1840, he said:—

"You asked me if I read German....I have contrived to read almost every volume of Goethe, and I have fifty-five [these were little leather-bound duodecimos], but I have read nothing else [i. e. in German], but I have not now looked even into Goethe, for a long time."

This letter shows approximately the date of the verses.

N2253: RICHES. There seems to be no question that this is Mr. Emerson's work, in spite of the Scottish garb in which, for his amusement, he clothed the little simile. It has no title in the verse-book.

N2254: PHILOSOPHER and INTELLECT. There is a passage in the journal for 1845, called "Icy light," on the cold-bloodedness of the philosopher, most of which is printed in *Representative Men*:—

"Intellect puts an interval....It is the chief deduction, almost the sole deduction from the merit of Plato (that which is no doubt incidental to this regnancy of the intellect in his work), that his writings have not the vital authority which the screams of prophets and the sermons of unlettered Arabs and Jews possess. There is an interval; and to the cohesion, contact is necessary. Intellect is the king of non-committal: answers with generalities. He gave me wit instead of love."

N2255: LIMITS. See "History," in *Essays, First Series*, pp. 39, 40.

INSCRIPTION. This was written at the request of Mrs. John M. Forbes, and is carved on a stone watering-fountain on the top of Milton Hill.

POEMS OF YOUTH AND EARLY MANHOOD

As was said in the Preface, these verses are printed, not for their poetical merit, but as showing the influence, on Mr. Emerson's character, thought and expression, of the sad and the happy events of the third decade of his life. Only a reserve in his strength that could hardly have been expected, together with the serenity of his nature, which was content to wait until the storm blew by, preserved his life during this period with disease ever threatening when it was not actually disabling him. After his establishment of his home in Concord and his second marriage, his health was almost uniformly good, in spite of the very serious exposure involved in his winter lecturing journeys afar, for the remainder of his life.

PRAYER. The incident of the hayfield where the Methodist haymaker said to Emerson, raking hay beside him on his uncle's farm, that men are always praying, and that all prayers are granted, which gave him the subject of his first sermon, is told in Mr. Cabot's Memoir. It seems to have suggested lines in this poem.

TO-DAY. Dr. Holmes has named Mr. Emerson's Phi Beta Kappa Address in 1837 as "Our intellectual Declaration of Independence," but this boyish poem, written thirteen years earlier, shows the germ which grew into the "American Scholar."

FAME. This bit of youthful irony on a theme which, even in college, its author often wrote upon, "Being and Seeming," was very possibly playfully addressed to one of his brothers, or, it may be, to himself.

THE SUMMONS. In the year 1822, Mr. Emerson wrote to a classmate: "I am (I wish I was otherwise) keeping a school, and assisting my venerable brother to lift the truncheon against the fair-haired daughters of this raw city.... Better tug at the oar,... or saw wood,... better sow hemp, or hang with it, than sow the seeds of instruction!" Next year matters were worse, for William went abroad, leaving him the school,—a formidable experience for a shy youth, still a minor, and younger than some of his fair and troublesome pupils. The "Good-bye, proud world" was his utterance of relief when he fled from them. They were the "silken troop," skilful in producing his "uneasy blush" alluded to in the present poem. Now he was to have the pulpit for a breastwork, for in 1826 he was approbated to preach.

It is interesting to see that the image of the procession of Days, so often used later, was already in his thought.

THE RIVER. In the same month in which these lines were written, their author told his brother, in a letter, that he meditated abdicating the profession, for "the lungs in their spiteful lobes sing sexton and sorrow whenever I only ask them to shout a sermon for me."

The poem was evidently written in the beautiful orchard running down to the Concord River behind the Manse.

GOOD HOPE. These verses show reviving life, and very likely were written when, in December, 1827, the young minister, going to Concord, New Hampshire, to preach, first saw Ellen Tucker, a beautiful girl of seventeen.

LINES TO ELLEN. A year from the time when he first saw Miss Tucker, Mr. Emerson again went to Concord, New Hampshire, and soon after became engaged to her.

A MOUNTAIN GRAVE. After the death of his wife, and during the time when the enlargement of his mental horizon made Mr. Emerson regard the forms in use in the church with increasing repugnance, his health again underwent severe strain, and his future became very uncertain, as the next two poems show.

HYMN. In the main body of this volume is printed the hymn,

We love the venerable house
Our fathers built to God,

which was sung at the ordination of Rev. Chandler Robbins, Mr. Emerson's successor. The hymn here printed was probably the first trial for a fit utterance for that occasion.

SELF-RELIANCE. These lines, without title, however, were written at the time when he resigned his place as pastor of the Second Church.

Mr. Emerson's friend, Mr. Charles Eliot Norton, relates that when they were making the home voyage from England together in 1873, Mr. Emerson showed him his pocket-compass, which he said he carried with him in travelling, and added, "I like to hold the god in my hands."

NAPLES and ROME. Journal, Divinity Hall, November, 1827. "Don't you see you are the Universe to yourself? You carry your fortunes in your own hand." Change of place won't mend the matter. You will weave the same web at Pernambuco as at Boston, if you have only learned how to make *one* texture."

Journal, 1834. "Remember the Sunday morning in Naples when I said, 'This moment is the truest vision, the best spectacle I have seen amid all the wonders; and this moment, this vision, I might have had in my own closet in Boston.'"

"Our first journeys discover to us the indifference of places. At home I dream that at Naples, at Rome, I can be intoxicated with beauty and lose my sadness. I pack my trunk, embrace my friends, embark on the sea and at last wake up in Naples, and there beside me is the stern fact, the sad self, unrelenting, identical, that I fled from. I seek the Vatican and the palaces. I affect to be intoxicated with sights and suggestions, but I am not intoxicated. My giant goes with me wherever I go."—*Self-Reliance*.

WEBSTER. The first of these fragments on New England's idol—until his apostasy to the cause of human Freedom, in the interests of Union—was the last verse of those beginning,

Has God on thee conferred
A bodily presence mean as Paul's,

printed a few pages earlier in this book. The second was the best passage in the Phi Beta Kappa poem, not otherwise remarkable. The third was written sadly after Webster's death.

LECTURES AND BIOGRAPHICAL SKETCHES

DEMONOLOGY

MR. EMERSON gave a course of ten lectures on Human Life, in Boston in the winter of 1838–39, of which "Demonology" was the last. In 1877 it was published in the *North American Review*. Much of the matter was drawn from his journals of 1837 and 1838. At that time Mesmerism, Animal Magnetism and Clairvoyance were attracting much attention, and wizards, male and female, found Boston a good field for their arts, and excited the curiosity and obtained the credence even of some persons of culture and religious character.

When the lecture was revised for publication as an essay, so-called "Spiritualism"—Mr. Emerson always spoke of it as "Spiritism"—had, from its humble beginnings in the "Rochester Knockings," spread far and wide in the United States, and invaded England also; so passages from journals between the years 1850 and 1860 referring to it were introduced. It appears also that one or two pages in "Spiritual Laws," in the first series of Essays, were transferred thither from "Demonology," the lecture which followed it in the course.

N2256: Taylor's *Philip van Artevelde*, Act IV., Scene 1.

N2257: Scott, *Lady of the Lake*, canto 1.

N2258: Journal, September, 1866. "Struggled hard last night in a dream to repeat and save a thought or sentence spoken in the dream; but it eluded me at last: only came out of the pulling with this rag,—

"his the deeper problem,
But mine the better ciphered."

Mr. Emerson was a good sleeper, yet had, at least at certain periods, frequent and vivid dreams. These were due to the activity of his imagination, for his fare was simple, and he was remarkably temperate in his eating and drinking. He often wrote, however, until late in the evening. His journals show that he was greatly interested in the psychology of his dreams;—how it was that he, a minor actor, and the guest, or often the victim, in the pleasing or startling drama, should have created the characters, painted the scene and furnished the dialogue.

In the journal for 1851 he wrote:—

"My dreams are somewhat arch and satirical, if I dare give them all the meaning they will bear. If they mean anything, they are surprising bits, yet by no means from a divine plane, but from a great sagacity on the Franklin level. This confusion in counting New Hampshire bills was an example—they had a varying value, twenty different figures on the corners."

Two years earlier, he copied these pleasing lines from Ford's play *The Sun's Darling*:—

"I have found
More sweets in one unprofitable dream
Than in my life's whole pilgrimage."

N2259: This thought came to him early, for in 1833, after seeing the ascending steps of animal forms in the Museum of the Jardin des Plantes in Paris, he wrote in his journal: "We feel that there is an occult relation between the very worm, the crawling scorpion and man. I am moved to strange sympathies." These extended far, for in the "Bacchus" he wrote:—

And the poor grass shall plot and plan
What it will do when it is man;

and in a lecture, in 1836, on the Humanity of Science, speaking of Lamarck's theories: "He says to the caterpillar, 'How dost thou, brother? Please God you shall yet be a philosopher.'"

N2260: Calidasa or Kâlidasa, an East Indian poet whose writings have great beauty and charm. His principal work is the *Sakuntala*. In the little poem on Birds ("Fragments on Nature," *Poems*, Appendix) they are called—

Gems in Nature's cabinet;
These the fables she esteems
Reality most like to dreams.

N2261: This is Mr. Emerson's favorite doctrine of Compensation, and he was greatly interested in the symbolism of the phenomenon of Polarity (see *Nature, Addresses and Lectures*, p. 98).

In his speech on the Fugitive Slave Law, he quotes from Æschylus these lines:—

“For evil word shall evil word be said,
For murder-stroke a murder-stroke be paid,
Who smites must smart.”

N2262: The thought of this paragraph is contained in the poem “Fate,” especially in its conclusion:—

For the prevision is allied
Unto the thing so signified;
Or say, the foresight that awaits
Is the same Genius that creates.

N2263:

You doubt we read the stars on high,
Nathless we read your fortunes true;
The stars may hide in the upper sky,
But without glass we fathom you.

“The Romany Girl,” *Poems*.

N2264: The office of the poet is to read the

Delicate omens traced in air.

See the motto to “Fate” in *Conduct of Life*.

N2265: From George Herbert’s poem “Man,” several verses of which are given in *Nature, Addresses and Lectures*, p. 68.

N2266: Mr. Emerson says this again in a fragment of verse:—

This passing moment is an edifice
Which the Omnipotent cannot rebuild.

N2267: The pine-tree in “Woodnotes” sings, not of a *fiat* Creation, but

Of tendency through endless ages.

N2268: See in the *Poems* (Appendix, “Fragments on the Poet”) the verses beginning

For what need I of book or priest,
Or sibyl from the mummied East?

N2269:

Εἷς οἰωνὸς ἄριστος, ἀμύνεσθαι περὶ πατρὸς.

Iliad, XIII., 243.

N2270: Mr. Emerson quotes this story from Montaigne.

N2271: Hecateus, a philosopher and disciple of the skeptic Pyrrho, accompanied Alexander the Great on his Asiatic conquest. He wrote on the Hyperboreans and also on Egypt.

N2272: Goethe, *Wahrheit and Dichtung*, bk. xx.

N2273: In his journal, Mr. Emerson makes magnetism a gift of the Prince of the Power of the Air; the purest men have it not. He cites Andrew Jackson as an instance of the magnetic man.

N2274: Something like this is said in the poem on Nature, who,—

by marvel of her own,
Strikes the loud pretender down.
For Nature listens in the rose
And hearkens in the berry's bell
To help her friends, to plague her foes,
And like wise God she judges well.

"Nature," I., *Poems*.

N2275: Quoted from Heracleitus.

N2276: Gyges is told of by Herodotus. Plato tells of his obtaining the ring, and with it invisibility, the criminal use of which obtained a queen and kingdom. Peter Schlemihl, the man without a shadow, is the hero of a tale by Chemisso.

N2277: In the essay in the first series on Spiritual Laws is a similar passage, where it is said that every man has his proper call, but "the pretence that he has another call, a summons by name and personal election and outward 'signs that mark him extraordinary and not in the roll of common men,' is fanaticism, and betrays obtuseness to perceive that there is one mind in all the individuals, and no respect of persons therein." The quotation in both passages is from the braggart speeches of Glendower in Shakspeare, *Henry IV*., Part I., Act III., Scene 1. A similar passage,

probably once part of "Demonology," and having also a reference to dreams, is on page 148 of "Spiritual Laws."

N2278: Mr. Emerson elsewhere quotes a saying attributed to Pindar, that "Zeus hates busybodies and those who do too much." Unhappily modern scholars think that Pindar's fragmentary line probably had no such charming significance.

The last two lines of this paragraph suggest what Mr. Emerson says of "The Poet" (*Poems*, Appendix),—his submissive willingness

to adjourn

To infinite time his eager turn,

His lot of action from the urn.

N2279: The Latin quotation from Cicero, criticising Epicurus, might be rendered, Unconsciousness is an element of what is great and generous.

Ralph Cudworth, an English clergyman (1617–88), wrote *The True Intellectual System of the Universe* and *A Treatise concerning Eternal and Immutable Morality*. It was not Cudworth, however, but his quotations, especially from Plato, that delighted Emerson in his college days. In the journal of 1845 he wrote: "I know no book so difficult to read as Cudworth proper. For as it is a magazine of quotations, of extraordinary ethical sentences, the shining summits of ancient philosophy, and as Cudworth himself is a dull writer, the eye of the reader rests habitually on these wonderful revelations and refuses to be withdrawn."

Patrick Colquhoun of Dumbarton, Scotland (1745–1820), was a police magistrate and wrote on economic subjects, criminals and pauperism in Great Britain. He lived for a time in Virginia in his youth.

N2280: Journal, 1866. "Incredulity of truth is apt to be accompanied by credulity of much nonsense, as in our skeptics in religion who go blind into Mr. Lister's astrology, and Mr. Hume's mesmerism."

N2281: When, in 1852, the "rat and mouse revelation" reached Concord, its disciples were, for the most part, of a kind that justified Mr. Emerson's remarks, and Judge Hoar's observation that, "if this were a treasure, it came to us in earthen vessels."

Of these manifestations Thoreau wrote to his sister,—

"Concord is just as idiotic as ever in relation to the spirits and their knockings. Most people here believe in a spiritual world which no respectable junk-bottle which had not met with a slip would condescend to for a moment—whose atmosphere would extinguish a candle let down into it like a well that wants airing; in spirits which the very bull-frogs in our meadows would blackball. Their evil genius is seeing how low it can degrade them. The hooting of owls, the croaking of frogs, is celestial wisdom in comparison. If I could be brought to believe in the things which they believe, I should make haste to sell out my stock in this and the next world's enterprises and buy a share in the first Immediate Annihilation Company that offered. I would exchange my immortality for a glass of small beer this hot weather. Where *are* the heathen? Was there ever superstition before? And yet I suppose there may be a vessel this very moment setting sail from the coast of North America to that of Africa with a missionary on board. Consider the dawn and the sunrise—the rainbow and the evening—the words of Christ and the aspirations of all the saints! Hear music! see, smell, taste, feel, hear—anything—and then hear these idiots, inspired by the cracking of a restless board, humbly asking, 'Please, Spirit, if you cannot answer by knocks, answer by tips of the table'!!!!!"—*Thoreau's Letters*.

N2282: Hotspur's answer to his anxious wife, begging him to confide in her the cause of his restlessness while he was planning revolt against the king.—*Henry IV., Part I., Act II., Scene 3.*

N2283: "These revelations...do not answer the questions which the understanding asks. The soul answers never by words, but by the thing itself that is inquired after. Revelation is the disclosure of the soul. The popular notion of a revelation is that it is a telling of fortunes....We must check this low curiosity. An answer in words is delusive; it is really no answer to the questions you ask."

This passage is from "The Over-Soul," *Essays, First Series*, where on pages 269 and 270 is much matter akin to this essay.

N2284: Mr. Emerson had a great liking for the epilogue to Beaumont and Fletcher's play, *The Honest Man's Fortune*, especially the lines:—

"Man is his own star, and the soul that can
Render an honest and a perfect man
Commands all light, all influence, all fate:
Nothing to him falls early, or too late.
Our acts our angels are, or good or ill,
Our fatal shadows that walk by us still."

N2285: Impatient as he was of quackery in things spiritual, and unattractive as semi-physiological matters were to him naturally, he knew that unexplained phenomena would yet receive their solution in accordance with beautiful and universal law. An extract from his journal of 1842 is here given:—

"How slowly, how slowly we learn that witchcraft and ghostcraft, palmistry and magic and all the other scattered superstitions, which, with so much police, boastful skepticism and scientific committees, we had finally dismissed to the moon as nonsense, are really no nonsense at all, but subtle and valid influences, always starting up, mowing, muttering in our path and shading our day. The things are real, only they have shed their skin, which with much insult we have gibbeted and buried. One person fastens an eye on us and the very graves of the memory render up their dead, the secrets that make us wretched either to keep or to betray must be betrayed; and another person fastens an eye on us, and we cannot speak a syllable, and the very bones of the body seem to lose their cartilages."

See also "Nominalist and Realist" in *Essays, Second Series*, pp. 234, 235.

ARISTOCRACY

ON HIS second visit to England, whither he had been invited by his friends, Alexander Ireland of Manchester and Thomas Carlyle, to give some lectures, Mr. Emerson wrote to his wife on February 10, 1848: "I have written a lecture on Natural Aristocracy, which I am to read at Edinburgh to-morrow, and interpolated beside some old webs with patches of new tapestry, contrary to old law."

The title "Natural Aristocracy" was given to make it the more intelligible to the English hearers; "The New Aristocracy" was at first contemplated. The lecture was the sixth and last of the course given in June, in London, before a somewhat select audience, including many titled persons, at the Portman Square Literary and Scientific Institution.

Of this essay, Dr. Holmes said, "Let him who wishes to know what the word means to an American whose life has come from New England soil, whose ancestors have breathed New England air for many generations, read it, and he will find a new interpretation of a very old and often greatly wronged appellation."

With regard to the Portman Square audience, Mr. Cabot says in his Memoir:—

“‘The English aristocracy,’ Emerson remarks in *English Traits*, ‘have never been addicted to contemplation;’ and Emerson’s idealism, thus abruptly presented, was not calculated to win them to it....Emerson’s London audience, to be sure, would probably in any case have given themselves but little concern with his ideas; it was not the ideas, but the man, that attracted them, so far as they were attracted.”

The essay as here presented by no means represents the lecture read in England. The subject, under whatever name,—Being *versus* Seeming, Heroism, Self-Reliance, Character, Greatness,—was one that he continually wrote upon from the days when, a student at Harvard, he stood at his tall desk in Hollis Hall (number 15), writing his thoughts by the dawn of a winter’s morning. Much matter accumulated, and selections from many sheets were variously grouped, to be read in different years to differing companies under the title “Aristocracy.” Mr. Cabot skilfully incorporated the best later fragments with the substance of the English lecture.

N2286: Professor N. S. Shaler, in his *Interpretation of Nature*, well illustrates the point that the facts of Evolution and Heredity make morals more essential than does the Biblical account of Creation.

N2287: Mr. Emerson said of Sir Walter Scott:

“His power on the public mind rests on the singular union of two influences. By nature, by his reading and taste an aristocrat, in a time and country which easily gave him that bias, he had the virtues and graces of

that class, and by his eminent humanity and his love of labor escaped its harm."—"Walter Scott," *Miscellanies*.

N2288: This paragraph suggests Guy, the "mortal mixed of middle clay," in the *Poems*.

N2289:

So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, Thou must,
The youth replies, I can.

"Voluntaries," *Poems*.

N2290:

And through man and woman and sea and star
Saw the dance of Nature forward and far.

"The Poet," *Poems*, Appendix.

N2291: Eight years after leaving England, when *English Traits* was published, Mr. Emerson wrote in his journal concerning our own country:—

"The detachment of the Puritans without aristocracy must be as great a gain to mankind as the opening of that continent, and though tender people may object to us an aristocracy of wealth,—if you think what that means,—opportunity, free trade and bringing all the powers to the surface,—it is what all aim at."

It is needless to say that, writing in the simpler days of the Republic, he had not in mind the overgrown fortunes of the present era of materialism. The "wealth" he had in mind was of the moderate sort that helps to well-being.

N2292: Southey's *Chronicle of the Cid* was a favorite book; Mr. Emerson liked to read fine passages from it to his children, and also from the old French *Chanson de Roland* the account of the hero, overwhelmed in the pass of Roncesvalles by the Moors through Ganelon's treachery, though wounded to death, standing by his dying friend Oliver and blowing on "the oliphant" the

"blast of that dread horn,
On Fontarabian echoes borne,
That to King Charles did come."

"Marmion."

N2293: There is much about Temperament in the essays, especially in "Fate" (*Conduct of Life*). See also in the *Poems*, in the "Fragments on Life," the lines beginning,—

From the stores of eldest matter,
The deep-eyed flame, obedient water.

N2294: Shakspeare, *Coriolanus*, Act IV., Scene 7.

N2295: In the journal of 1852 there is a passage on "Fate which appears in statistics; exalts races by a cellule in their brain; that makes certain families miners, and others hunters, and levies her own tariffs by making dreadful boundaries of her own," etc.

N2296:

"Nothing to him falls early or too late."

Beaumont and Fletcher, *The Honest Man's Fortune*, Epilogue.

N2297: This phrase is quoted from the speech on the scaffold by Richard Rumbold, one of Cromwell's soldiers of extreme Republican views. He served at Dunbar and Worcester, and was one of the guard around the scaffold of Charles I. After the Restoration he was engaged in a conspiracy to assassinate Charles II. and the Duke of York. When the plot was discovered he escaped to Holland, but later, while serving in the army of the Duke of Argyll, was captured, tried and executed. On the scaffold he scoffed at the divine right of kings, and said, "I am sure there was no man born marked of God above another."

N2298: In a stray fragment of the beginning of "Natural Aristocracy," as given in the United States, is the following sentence which also evidently appeared in the lecture as given in Boston: "I am well aware that, in almost every town in the world but our towns, there would be a sort of insult and cruelty in speaking to a great mixed audience on the opportunities and duties of the favored classes."

N2299: This was Thoreau's saying.

N2300: A good story relating to the price of men is given in *Representative Men*, p. 152.

N2301: "The one serious and formidable thing in nature is a will." See *Conduct of Life*, p. 30.

N2302: Journal, 1831. "He that does nothing is poorer than he that has nothing." See also p. 232 in "Worship" (*Conduct of Life*).

Mr. Emerson wrote in his journal for 1866:—

"Aristocracy is always timid. After I had read my lecture on Natural Aristocracy in London and had said, after describing the 'man without duties,' 'Who can blame the peasant if he fires his barns?' etc., Lord Morpeth came to see me at Chapman's, and hoped I would leave out that passage if I repeated the lecture."

The aristocracy were much alarmed at this time. Across the Channel, in France, a revolution was going on, and in England the Chartist demonstrations caused grave anxiety.

In a letter which Mr. Emerson wrote to his wife from London, March 23, 1848, he tells of this state of affairs, and adds:—

"One thing is certain; that, if the peace of England should be broken up, the aristocracy here—or, I should say, the rich—are stout-hearted, and as ready to fight for their own as the poor; are not likely to run away."

N2303: This was Professor Louis Agassiz, who at that time was delighting the audiences of country lyceums, familiar enough with woodchucks, robins, pickerel and river-turtles, with his classifications and descriptions of radiates, mollusks and articulates. His charming presence, his interesting foreign accent, his enthusiasm and his ready drawing swept all before him.

N2304: "It will not be doubted, that, if a beautiful person is born into a family, a new career is opened for that person,—an influence which no reasoning and no legislating could hinder, and

which must remain a differencing, that is, an aristocratic quality."—
Stray sheet from "Beauty."

N2305: I find this passage on a stray sheet, followed, however, by the sentence beginning the next paragraph here:—

"Will any one question the uses of an aristocracy? Not while there is any remainder of the substance in the form. For the name is a verdict. The noble ennobles. That is his use. Can there be any greater?"

N2306: After a parlor-lecture in a Western city, some metaphysicians with taste for dialectics undertook to make Mr. Emerson defend his thesis and prove his utterances. He said, with amused good nature, when he came home, "Their logicians rolled me in the dust."

N2307: This was a counsel in accordance with his own practice, steadily urged upon all who sought his advice,—Do not make the mistake of assuming chivalries not proper to you.

N2308:

Who bides at home, nor looks abroad,
Carries the eagles and masters the sword.

"Destiny," *Poems*.

N2309: This was Mrs. Barbauld's line, in her poem "The Brook":—

"And the more falls I get move faster on."

Mr. Emerson made it one of his mottoes in life.

N2310: Ali ben Abu Taleb, son-in-law of Mahomet, and fourth Caliph, called for his courage "The Lion of God." Mahomet said of him, "I am the city of knowledge, but Ali is the gate." He is often mentioned in Mr. Emerson's writings.

Journal, 1845. "The Caliph Ali is a fine example of character. 'He possessed a vein of poignant humour which led Soliman Farsy to say of a jest he one day indulged in, "This it is which has kept you back to the fourth" (Abu Beker Oman and Othman having been successively elected before him), for a reliance on his rights of sovereignty was the ruling feeling of that sacred person, and it is one which gives ascendance to the inner and individual nature in opposition to the suggestions of appearance and the observance of our relations with the many.'

"Mahomet said, 'Various are the Virtues, O Ali, by which men are brought near to their Creator, but thou by thy intellect art created near, and standest before them by many degrees of approach.'"

The quotations come from the *Akhlak-i-Jalaly*, translated by W. F. Thomson (London, 1839). It is a Persian work of the fifteenth century, tracing its origin to an Arabic work five centuries older, which was an "effort to reconcile Greek Philosophy with the social and religious systems of the Mohammedans." Mr. Emerson alludes to this in "Plato," *Representative Men*, p. 40.

N2311: The sneer was an impossibility to Mr. Emerson. In a note-book of 1827 he says of a man of the world: "If his opinions shall turn out right, he betrays his imperfections of mind by a sneer."

N2312: He always guarded his independence on every question. He said, "The relation of men of thought to society is always the same; they refuse that necessity of mediocre men, to take sides."

PERPETUAL FORCES

PRESIDENT LINCOLN appointed the thirteenth day of April, 1862, as a Day of Fasting and Prayer, recommending to the Country to take thankful remembrance of the better aspect of our affairs at that early stage of the War of the Rebellion.

On that day Mr. Emerson read before the Twenty-eighth Congregational Society (Theodore Parker's), at the Music Hall in Boston, an address called "Moral Forces." It was a subject on which his mind dwelt especially then, for in the war he saw the revulsion due to these forces heralding better days, and in his lectures during the darker days which followed, he dwelt on their sure action, to encourage the people.

In the late autumn of the same year, he gave the lecture "Perpetual Forces," in the Fraternity Course in Boston. His notebook, begun the following year, 1863, is called "Forces and Forms." Its mottoes are "An arch never sleeps," and "Every man requires, or lives from, the whole world." It is full of interesting passages on the greater forces, and the essay as it stands, made no doubt from the two lectures, was reinforced from these notes for publication in the *North American Review* in 1877.

N2313: The advantage and blessing of poverty are emphasized by Mr. Emerson in the essay on Domestic Life. Also in "Worship," in the same volume (*Conduct of Life*), he says: "Thus can the faithful student reverse all the warnings of his early instinct under the guidance of a deeper instinct. He learns to welcome misfortune, learns that adversity is the prosperity of the great."

N2314:

Ever the Rock of Ages melts
 Into the mineral air,
To be the quarry whence to build
 Thought and its mansions fair.

"Fragments on Life," *Poems*, Appendix.

N2315: Compare in the essay on Farming, in *Society and Solitude*, the passage, "Who are the farmer's servants?" etc.

N2316:

Thou seek'st in globe and galaxy,
He hides in pure transparency;
Thou askest in fountains and in fires,
He is the essence that inquires.

"Woodnotes," II., *Poems*.

N2317: Mr. Emerson loved to see that it was alike true of farmer, engineer or poet, that

He planted where the Deluge ploughed,
His hired hands were wind and cloud;

His eyes detect the Gods concealed
In the hummock of the field.

"Fragments on the Poet," *Poems*, Appendix.

N2318:

The archangel Hope
Looks to the azure cope,
Waits through dark ages for the morn,
Defeated day by day, but unto victory born.

"Fragments on Life," *Poems*, Appendix.

N2319:

For the world was built in order,
And the atoms march in tune;
Rhyme the pipe, and Time the warder,
The sun obeys them and the moon.

"Monadnoc," *Poems*.

N2320: This passage in the manuscript is followed by, "To prize sensibility, see the subjects of the poet; they were insignificant until he raised them."

N2321: "'You tell me a great deal of what the devil does, and what power he has: When did you hear from Christ last?' asked Father Taylor of some Calvinistic friends."—Notes on Forces.

N2322: Mr. Emerson elsewhere quotes Bacon to the effect that Nature is to be commanded by obeying her. In the essay on Worship, in *Conduct of Life*, he says that "the last lesson in life, the

Choral Song which rises from all the elements and all the angels, is a voluntary obedience, a necessitated freedom. Man is made of the same atoms as the world is; he shares the same impressions, predispositions and destiny."

N2323: In the lecture on the National Fast Day alluded to in the note at the opening of this essay, was the following kindred passage on the urgent conditions of the day:—

"Let us rejoice in every success and in every overthrow, which a wise and good soul, whether among our enemies or in other nations, would see to be for the right, for ideas, for the good of humanity. We are rightly glad only in as far as we believe that the victories of our cause are real grounds of joy for all mankind.... Things point the right way. A position is taken by the American Executive,—that is much; and it has been supported by the legislature. What an amount of power released from doing harm and now ready to do good! The world is nothing but a bundle of forces, and all the rest is a clod which it uses. In all works of man there is a constant resistance to be overcome and constant loss by friction. But the tree rises into the air without any violence, by its own unfolding, which is as easy as shining is to the sun, or warming to fire. It is the same with the moral forces. People, in proportion to their intelligence and virtue, are friends to a good measure, whilst any wrong measure will find a hitch somewhere. Inspiration and sympathy—these are the cords that draw power to the front, and not the harness of the cannon....

"We are listless and apologizing and imitating; we are straws and nobodies,—and then the mighty thought comes sailing on a silent wind and fills us with its virtue."

N2324: Another note on Forces from those made in 1863:—

"My point is, that the movement of the whole machine, the motive force of life, and of every particular life, is moral. The world stands on our thoughts, and not on iron or cotton; and the iron of iron, the fire of fire, the ether and source of all the elements is moral forces."

N2325: In allusion to Rufus Choate's flippant allusion to the declaration of the rights of man in the Preamble to the Constitution, Mr. Emerson said, "Only the great generalizations survive. The sharp words of the Declaration of Independence, lampooned then and since as 'glittering generalities,' have turned out blazing ubiquities that will burn forever and ever."¹⁰⁷

The passage in "Voluntaries" is here suggested, beginning,—

Great men in the Senate sate.

N2326: Thoreau said, "If you have built castles in the air, that is where they should be; *now put the foundations under them.*"

This note from the manuscript "Forces" may be added here:—

"Family likeness in the Greek gods. Socrates says, 'the laws below are sisters of the laws above.' So really are the material elements of close affinity to the moral elements. But they are not their copies, but they are themselves. They are the same laws acting on superior and inferior planes. On the lower plane, it is called Heat; on the higher, Love. Whenever you enunciate a physical law, I hear in it a moral rule."

¹⁰⁷ This was in a lecture on Books given in the Fraternity Course in Boston in 1864. See Mr. Cabot's *Memoir of Emerson*, vol. ii., p. 790, but it is probable that this sentence had been uttered in more direct retort to Mr. Choate's words years before, and was only used again in the lecture.

CHARACTER

This essay was the concluding lecture of a course given before the Parker Fraternity in Boston by Mr. Emerson, in the winter of 1864–65. It was printed in the *North American Review* in April, 1866. It might have been as fitly called “The Sovereignty of Ethics” as the essay which bears that name.

The reader is referred to the chapter on the same subject, printed in the second series of Essays in 1844.

N2327: The Marquis de Vauvenargues (1715–1747) was a Provençal writer on Morals, and the correspondent of Voltaire and Mirabeau.

N2328: Wordsworth’s “Ode to Immortality.”

N2329: This convertibility of Truth, Goodness and Beauty, making a trinity of Moral Force, appears in the chapter on Spirit, in “Nature,” in the first pages of “The Poet” in the second series of Essays, and elsewhere in Mr. Emerson’s writings.

N2330: This is the quatrain "Sacrifice," in the *Poems*.

N2331: In the Address to the Divinity Students (*Nature, Addresses and Lectures*, pp. 128, 129), Mr. Emerson set forth this thought more fully.

N2332: The charges of blasphemy against Empedocles and Socrates, and even against Jesus, were on the same ground. In a sermon note-book and journal, kept by Mr. Emerson in 1828, he wrote:—

"I find a kindling excitement in the thought that the feeling which prompts a child to an act of generosity is the same which guides an archangel to his awful duties: that in the humblest transaction in which we can engage we can introduce these stupendous laws which make the sovereignty of the creation the character of God. It seems to me, in obeying them, in squaring my conduct by them, I part with the weakness of humanity. I exchange the rags of Nature for a portion of the majesty of my Maker. I am backed by the Universe. I lean on omnipotence."

N2333: In the journal for 1856 he wrote cheerfully: "I have been writing or speaking what were once called novelties for twenty-five or thirty years, and I have not now one disciple." He only wished people to go to the fountain-head themselves: that practice was all he wished to convert others to.

N2334: Mr. Emerson liked to recognize what was best in his friends, the great and universal part, and ignore their weakness. The following is from a sheet marked "Character:"—

"I see only two or three persons and allow them all their room: they spread themselves at large to the horizon. If I looked at many, as you do, or compared these habitually with others, these would look less. Yet are they not entitled to this munificence? Is it not their own? Is not munificence the only insight?

"Our exaggeration of all fine characters arises from this, that we identify each in turn with the Soul. Presently the individual warps and shrinks away, and we accuse him. Hard to find an ideal in history. By courtesy we call saints and heroes such, but they are very defective characters; I cannot easily find a man I would be."

N2335: It is difficult to say whether these lines are a free translation, or only inspired by Mr. Emerson's Oriental readings. They appear in the verse-book, as if meant to show the joy that came from converse with God in Nature, as a concluding verse of an early form of "My Garden," printed now in the Appendix to the *Poems* under the name of "Walden."

N2336: This was his own method. He read in Plato, Proclus, Æschylus, Dante, Shakspeare, Swedenborg "for lustres," or, as he put it to a young friend, "Only read to start your own team."

N2337:

Yon water-flags, yon sighing osier,
A drop can shake, a breath can fan;
Maidens sigh and weep: Composure
Is the pudency of man."

"The Poet," *Poems*, Appendix.

N2338: Mr. Emerson used to laugh over Béranger's "Le bon Dieu," and Swift's irreverent picturing of the last judgment, which he printed in *Parnassus* under the title "Jove and the Souls."

N2339: His Aunt Mary Emerson's journals were rich with the imagery of the old religion, drawn from the Old and New Testaments and from Milton.

N2340: In the diary of Rev. William Emerson of Concord, Mr. Emerson's grandfather, it appears that during the excited month preceding the outbreak of the Revolution at the Old North Bridge, his first sermon, with the purpose of arousing the freemen to take up arms, met with only moderate success, but in the course of a week he joined forces with a neighboring minister and they had an all-day preaching; result, "Minute men enlisted to the number of one hundred or more."

N2341: Compare the passage about "mere morality," in "Worship," *Conduct of Life*, p. 215.

N2342: This paragraph comes from the journal of 1845. At the time that it was written, with the apt quotation from Von Ense, Theodore Parker was one of the most active and earnest preachers of the Gospel in Massachusetts, though called an infidel.

N2343: In *Representative Men* Mr. Emerson expressed his impatience of Swedenborg's exclusive Hebraism in his writings.

N2344:

The rules to men made evident

By Him who built the day,
The columns of the firmament
Not firmer based than they.

N2345: In his Divinity School Address Mr. Emerson called Jesus the friend of man. When it was printed, Miss Elizabeth Peabody begged him to write "Friend" instead of "friend." "No," he answered; "if I did, they would all go to sleep."

N2346: Dr. Charles T. Jackson, Mrs. Emerson's brother, when a boy, was, with several others, the pupil of the excellent but eccentric Dr. Alleyne of Duxbury. One Sunday the boys, accompanying their reverend friend to afternoon service in a time of drouth, each carried a large umbrella under his arm. "Boys!" said the Doctor, "what nonsense is this?" "Why, Doctor, you prayed for rain this morning." "Pshaw! pshaw! boys; it's customary!"

N2347: Journal, 1839. "The Sabbath is my best debt to the Past, and binds me to some gratitude still. It brings me that frankincense out of a sacred antiquity."

N2348: Milton, "Vacation Exercises," not quite correctly quoted.

N2349: These lines from Keats's poem "Hyperion" were favorites with Mr. Emerson:—

"One avenue was shaded from thine eyes,
Through which I wandered to eternal truth."

EDUCATION

AN INVITATION to attend and speak words of counsel at the summer festivals attendant upon the graduating exercises of colleges throughout the country always had great attraction for Mr. Emerson. To Carlyle, always praising his friend's words, and as constantly recommending silence and inveighing against speech, Mr. Emerson wrote in 1841: "As usual at this season of the year I, incorrigible spouting Yankee, am writing an oration to deliver to the boys in one of our little country colleges nine days hence. You will say I do not deserve the aid of any Muse. O but if you knew how natural it is to me to run to these places! Besides, I am always lured on by the hope of saying something which shall stick by the good boys."

Of course the privilege of the scholar and his corresponding duties, the objects of study and thought, and advice on the choice, use and limitations of books, were the subjects treated. The essays in this volume on the Scholar and the Man of Letters were college addresses, and the present essay was made up from material used in several given on such occasions, especially those at Waterville

College in Maine, and at Dartmouth College at Hanover, New Hampshire, in 1863, and at Middlebury, Vermont, in 1864.

It should be remembered that Mr. Emerson had experiences as a teacher in both city and country schools for four years, in which pursuit he had little satisfaction, because, being shy and young, he did not follow his instincts and break loose as much as he would have liked to do from routine methods. In his village life he served for many years on the School Committee, but with great modesty, and in his later life he served on the Board of Overseers of Harvard College, admiring rather the administrative ability of others than taking an active part. He was also on visiting committees. Of his service on these Mr. Cabot says: "He was chairman, from time to time, of committees, of whose reports I find fragmentary drafts among his papers, mostly of a general character; insisting that the aim of the college being to make scholars, the degrees, honors and stipends should be awarded for scholarship, and not for deportment; and that scholarship is to be created, not by compulsion, but by awakening a pure interest in knowledge. 'The wise instructor accomplishes this by opening to his pupils precisely the attractions the study has for himself. He is there to show them what delights and instructs himself in Homer, or Horace, or Dante, and not to weigh the young man's rendering, whether it entitles to four or five or six marks. The marking is a system for schools, not for the college; for boys, not for men; and it is an ungracious work to put on a professor.'"

N2350: In his lecture "Boston," Mr. Emerson says, "I trace to this deep religious sentiment and to its culture great and salutary results to the people of New England; first, namely, the culture of the intellect, which has always been found in the Calvinistic church." He then quotes with pride the order of the General Court of

Massachusetts in 1637, with regard to the establishment of schools in all towns “after the Lord has increased them to more than fifty householders,” beginning, “to the end that learning may not be buried in the graves of the forefathers, ordered,” etc.

N2351: Some paragraphs in this portion of the Essay come from lectures on Home, and probably from “School,” in the course on Human Life given in Boston in 1838–39.

N2352: The passage on the blessings of the home life among the comparatively poor, in the essay on Domestic Life (*Society and Solitude*, pp. 119–121), shows Poverty as a teacher. The following passage is from the lecture on Home given in 1839:—

“The instinct of the mind, its sense of stability, demands some outward type, a *home*, and as fast as one and another are seen to be impermanent, transfers its regard. To the infant, the mother, the bed, the house and furniture supply the object. Presently these pass away; the boy finds that he and they can part and he remain whole. The old ties fade and are succeeded by new, which prove equally fleeting. He is not yet a man if he have not learned the household laws, the precepts of economy and how to reconcile them with the promptings of love, of humanity. A wise man can better afford to spare all the marts and temples and galleries and state-houses and libraries than this key that deciphers them all.”

N2353:

For the Muse gave special charge
His learning should be deep and large,
And his training should not scant
The deepest lore of wealth or want:

His flesh should feel, his eyes should read
Every maxim of dreadful Need;
In its fulness he should taste
Life's honeycomb, but not too fast.

"The Poet," *Poems*, Appendix.

N2354: "Kepler and Newton are born with a taste for the manners of Nature, and catch the whole tune from a few bars, usually from one; for they know that the single fact indicates the universal law."—Lecture on Seven Metres of Intellect, 1866.

N2355: Compare the chapter on Language, in "Nature," in the first volume.

N2356: See in "The Poet" the lines beginning,—

Divine Inviters! I accept
The courtesy ye have shown and kept
From ancient ages for the bard, etc.

N2357:

Being's tide
Swells hitherward, and myriads of forms
Live; robed with beauty, painted by the sun,
Their dust, pervaded by the nerves of God,
Throbs with an overmastering energy
Knowing and doing.

"Pan," *Poems*, Appendix.

N2358: The value of a day is told in "Works and Days," in *Society and Solitude*.

N2359: Mr. Emerson's young friends John and Henry Thoreau, in their private school in Concord, and especially Mr. Alcott in his schools in Connecticut and Boston, had practised some of the methods, then ridiculed, now held in the very highest esteem. Horace Mann had made wonderful improvements in the Massachusetts public schools, but in very practical ways. George Barrell Emerson,¹⁰⁸ a distant cousin and highly valued friend of Mr. Emerson, had done much towards raising the quality of public instruction and had kept a school for young ladies in Boston, noted for its excellence.

N2360: The compensatory swing of the pendulum of public opinion towards athletics and manual training for boys and girls has surely come.

N2361: In his address to the Adelpic Union at Williams College, in 1854, Mr. Emerson said:—

"Trade is not to know friends, or wife, or child, or country. But this walking-ledger knows that though he, poor fellow, has put off his royal robes, somewhere the noble humanity survives, and this consoles him for the brevity and meanness of his street-life. He has not been able to hide from himself that this devotion to means is an absurdity; is, for a livelihood, to defeat the ends of living.... He has said, Let there be schools, a clergy, art, music, poetry, the college. But if the youth, looking over the college wall at the houses and the lives of the founders, make the mistake of imitating

¹⁰⁸ Author of the *Trees and Shrubs of Massachusetts* and of *Recollections of an Old Teacher*.

them, they may well say, 'We paid you that you might not be a merchant. We bought and sold that you might not buy and sell, but reveal the reason of trade. We did not want apes of us, but guides and commanders.'"

N2362: "We rightly speak of the guardian angels of children. How superior in their security from infusions of evil persons, from vulgarity and second thought! They shed their own abundant beauty on the objects they behold. Therefore they are not at the mercy of such poor educators as we adults. If we huff and chide them, they soon come not to mind it and get a self-reliance; and if we indulge them to folly, they learn the limitation elsewhere."—"Uses of Great Men," *Representative Men*.

N2363: In some notes written by Mr. Emerson in 1846, for a little speech at the reunion of his class, twenty-five years after graduating, after telling of all the various works they have in those years been called upon to do, he adds: "But, if we have done these things well, as I doubt not, it was because we could carry ourselves good-humouredly as boys."

N2364: Compare, in the "Fragments on the Poet," in the Appendix to the *Poems*, the lines beginning,—

For thought, and not praise;
Thought is the wages
For which I sell days, etc.

N2365: Mr. Emerson had been greatly pleased with Thomas Hughes's books, and also with the life of Hodson, his schoolmate at Rugby, *Twelve Years of a Soldier's Life in India*, to which he wrote the introduction. During one of Mr. Emerson's winter lecturing-

trips, perhaps in 1860, he was invited to visit a school and say something to the children. In his speech he advised them to read some books that he thought well of, among them *Tom Brown*. Next day he was denounced in the local paper for spreading incendiary abolitionist doctrines in the schools and holding up the traitor John Brown as an exemplar.

N2366: His practice was exactly in accordance with his word. With all his sweetness and serenity and the respect with which he treated his own and others' children, he had the quality of inspiring awe at any moment, and resistance to him by word or act was impossible.

N2367: Sir Charles Fellow's discovery of Xanthus, the capital of old Lycia, was in 1838. He took Mr. Emerson to the British Museum to show him the results of his ten years' labor. The finest part were the statues in honor of the twelve cities which sent aid to Harpagus, the general who reduced the Ionian cities.

N2368: Mr. Emerson elsewhere tells that Dr. Johnson is reported to have said: "If the child says he looked out of this window, when he looked out of that—whip him!"

N2369: In spite of Mr. Emerson's humble opinion of his success in his schools, he was remembered with respect and regard by his pupils. Mr. Benjamin Peter Hunt, of Philadelphia, was his pupil in the school at Chelmsford, a boy of whom Mr. Emerson said later, "He was a philosopher whose conversation made all the social comfort I had." Mr. Hunt wrote to him in 1860:—

"It is now thirty-five years since you began your teachings to me, and, with the exception of the great rough impartial world, I think they are the best which I ever received from any man I have personally known. I hope I shall continue to receive similar teachings thankfully, as at present, for many years to come."

In 1865 the ladies whom he had taught as girls in Boston invited him to meet them, and among his words to them on that occasion were the following:—

"I still recall my terrors at entering the school; my timidities at French, the infirmities of my cheek, and my occasional admiration of some of my pupils,—*absit invidia verbo*,—and the vexation of spirit when the will of the pupils was a little too strong for the will of the teacher.... I am afraid none but I remembers the merit of the 'compositions' which I carefully read, and with the wish to fix their comparative rank.... Now I have two regrets in regard to the school. The first is that my teaching was partial and external. I was at the very time already writing every night, in my chamber, my first thoughts on morals and the beautiful laws of compensation and of individual genius, which to observe and illustrate have given sweetness to many years of my life. I am afraid no hint of this ever came into the school, where we clung to the safe and cold details of languages, geography, arithmetic and chemistry. Now I believe that each should serve the other by his or her strength, not by their weakness; and that, if I could have had one hour of deep thought at that time, I could have engaged you in thoughts that would have given reality and depth and joy to the school, and raised all the details to the highest pleasure and nobleness. Then I should have shown you (as I did afterwards to later friends) the poems and works of imagination I delighted in; the single passages which have made some men immortal. The sharing a

joy of this kind makes teaching a liberal and delicious art. What I wonder at is that I did not read to you, and attempt to teach you to read, certain selections of Shakspeare and the poets, in which in late years I have had a certain degree of success." Yet the "fair-haired daughters of this raw city" against whom he had "lifted the truncheon," as he wrote forty-two years earlier, brought no complaint against him.

N2370: Mr. Emerson often spoke of the good he had received then and later from works of poetry or imagination smuggled under the bench in school and college.

All through college, he was diligently working along the lines that his genius pointed out, to the neglect, however, of the required mathematics, a hopeless task always to him. His rank was about halfway down his class list, but he won prizes for speaking and composition.

He used to express to his friends his pleasure that "children nowadays are encouraged to do things and taught to do them," as contrasted with the times when childish virtue was summed up in the familiar lines of negative virtue,—

"Speak when you're spoken to,
Do what you're bid,
Shut the doors after you,
And you 'll never be chid."

THE SUPERLATIVE

IN NOVEMBER, 1847, shortly after his arrival in England, Mr. Emerson gave a lecture on the Superlative, in his course of four before the Manchester Athenæum. Mr. Ireland says that it was also read in London. It underwent modification and received additions later. As it stands now, it was printed in the *Century Magazine* in February, 1882.

In connection with this essay, it is pleasant to give this tribute to Mr. Emerson's power of winning his way with hearers, taken from a newspaper article in the year 1879, apropos of his reading "The Superlative" at that time to the students at Amherst College:—

"In truth there was something wonderful in the way his unaggressive mind has melted away all opposition. It was my privilege to hear him read... 'The Superlative, or Mental Temperance,' to an audience certainly as orthodox as can be had in Massachusetts. Years ago, when Mr. Emerson was announced to lecture in that place, only one room in the town was at his disposal, and a union prayer-meeting was appointed in the same building and at the same hour as the lecture, in order to keep the people away. At his last visit he occupied the platform of the College Hall, and

President Julius H. Seelye introduced him, using very aptly and tenderly Emerson's own words, 'The hand that rounded Peter's dome,'" etc.

N2371: This was Jonathan Phillips, an esteemed Bostonian whose words Mr. Emerson on several occasions noted in the journals.

N2372: The following is from one of the note-books:—

"The excellence of what I call the *Low Superlative* is shown in Newton's praise of Cotes, 'If he had lived, we should have known something,' or in the *mot* which I found in D'Herbelot, 'If the poems of Dhoair Fariabi fall into thy hands, steal them, though it were in the temple of Mecca,' or in Tom Appleton's speech about Shakspeare, 'He'll do.'

"'The whistling of cannon-balls affected him so unpleasantly that he withdrew' from the army.—Herr Von P. in *Life of Carl Loewe*, Dwight."

N2373: The portion of the lecture about the temperance of the Greek mind is omitted from the essay. I give the following:—

"To Beauty the positive degree is essential. Accuracy is essential to beauty; and the old Latin verse declares that 'the Graces are slow to unbind their zone.' Temperance seems the genius of the Greeks, who were the nation of beauty,—Temperance in rhetoric, painting, sculpture and architecture.

"Temperance too in our partial sense; for Simonides said: 'Bacchus rejoices in being mixed, himself the fourth, with three nymphs;' i. e., wine with three parts water.

"Observe the studied moderation of their phrases. In Athens the Pelasgicon was a strip of land under the western wall of the citadel. A curse had been pronounced on any who should tenant it, and the oracle

declared it, 'Better untrodden.' Especially users of the positive degree were the Spartans, who wrote to be read, and spoke to be understood; whose laws were not written. The first Greek Olympiad is the boundary of fable and credible history. Nothing is more remarkable than the severe simplicity of their building, held aloft by just enough support, and all superfluity removed; translating the prose of a wall into the poetry of a colonnade.

"They called Intellect the science of metes and bounds. Greek architecture is geometry. Its temples are diagrams in marble, and not appeals to the imagination, like the Gothic—they are powers of the square and cube. They are productions of the same mind that led Thales to show the Egyptians how to measure the height of their pyramid, by sticking his staff into the ground at the extremity of the shadow of the pyramid and computing it by the Rule of Three, or the famous 47th proposition by Pythagoras,—

"'When the famed lines Pythagoras devised
For which a hecatomb he sacrificed,'—

and the beautiful command of the Delphian Apollo to the Athenians, that they should double his altar, which was a cube (and the doubling the cube being a test of mathematical skill)."

N2374: *Hamlet*, Act iv., Scene 4.

N2375: Antonio Magliabecchi (1633–1714), the son of a Florentine goldsmith, was a remarkable collector of books, and scholar, and became librarian to the Grand Duke of Tuscany, to whom he left his great library, which the Duke gave to the city.

Giovanni Pico, son of the prince of Mirandola (1463–94), a very remarkable and brilliant scholar. He was versed in Hebrew, Arabic

and Chaldee, and devoted himself to sacred letters. He came under the influence of Savonarola, and in the later years of his short life showed great piety and beauty of character.

N2376: This was a saying of Linnæus, the great botanist.

N2377: In one of the manuscript sheets this sentence ends thus: "The most powerful means are the cheapest; fire, water, fresh air, bodily activity, the stroke of the hand, a kind eye, a serene face,—these are the drugs of Æsculapius and Galen, and these leave the apothecary's shop to inferior and busier doctors. *Peu de moyens, beaucoup d'effet.*"

N2378: Two scraps from the lecture might here be given: "The legs of a throne are the plough, the oar, the anvil and the sewing-machine." "I am sorry to find that among the Norse deities was the god *Brage*, celebrated for his eloquence and majestic mien."

N2379: See in "Aristocracy," "The terrible aristocracy that is in Nature. Real people dwelling with the real face to face undaunted," etc.

N2380: The following is from the lecture-sheets on the subject of the Superlative:—

"In India, it is colossal, and though occasionally confounding us from our want of all key to the apologue, often beautiful. The picture which the Mahabarata gives of the wars of the Suras and Asuras, of the churning the Ocean with the Meron mountain to obtain the drops of the Amreeta, or liquor of immortality, is in the gigantic taste, but is pleasing, and the terrible earnestness of the belief in Fate lends an energy to the picture of

all conflicts, such as those of the enemies of Hari. What can be more tender than the assertion that 'the flame of the funeral pile is cool to the widow,' what more daring than the picture the Brahmins give of the beatitude of contemplative absorption when they declare, that 'Heavenly fruition is an impediment to felicity'?

"In the infancy of society, in barbarous nations, it is as pleasing as berries and game: in the *Arabian Nights*, we have the living Superlative; the fragments of Persian border poetry are gay, light and exhilarating.

"Better yet when we come full on (that desirable person) Hafiz, the model of lyric grace and felicity, the Æolian harp hung in grapevines and harem windows,—Hafiz, the foam of the cup, the sheen of the waterfall,—all whose poetry is a superlative, yet in whom it is native."

N2381: "It was quite coincident with this habit of thought, the alternative which the Arabians carried with them in their triumphant march, the Koran or the Sword. With the like extreme, the Prophet encouraged his followers: 'By the God of Abu Taleb's son I swear that a thousand beheadings were easier than one death-bed! 'The saint's best blush in Heaven is his heart's blood red.'"

N2382: In the essay on Plato (*Representative Men*, pp. 52–54) the Oriental and Occidental habits of mind are contrasted, the East loving infinity, the West delighting in boundaries.

N2383: This passage followed in the lecture:—

"Perhaps this dominion of the positive degree is to proceed much farther; that our life has at present far too much inflation. European history is the age of wine, age of miscellany, of appetite, of ponderous expense. I call it the age of wine. The age of water, the simpler and sublimer

condition, when the wine is gone inward, or the constitution has powers of original chemistry and can draw the wine of wine from water, as the earth out of loam and silex educes the orange, the pomegranate, plum, peach, pineapple and grape, the *Rus Ruris*, the age of gardens, the age of Temperance, of bread-eaters and water-drinkers; of simple and sincere speech and dealing; the age of the users of the positive degree;—is yet in its coming.”

Here is a fragment that did duty probably in “The Superlative,” though parts of it are now elsewhere printed:—

“The rule of positive and superlative is this. As long as you deal with things from your common sense, or as other people in the street, call things by their right names. But every man may be (as some men are) raised to a platform whence he sees beyond sense to moral and spiritual truth; when he no longer sees snow as snow, or horses as horses, but only sees or names them representatively, for those interior facts which they signify. This is the way prophets, this is the way poets use them. And in that exaltation small and great are as one, the mind strings worlds like beads upon its thought. The success with which this is done can alone determine how genuine is the inspiration.”

THE SOVEREIGNTY OF ETHICS

"SOME MINDS are incapable of skepticism....They may well give themselves leave to speculate, for they are sure of a return. Once admitted to the heaven of thought, they see no relapse into night but infinite invitation on the other side. Heaven is within heaven, and sky over sky, and they are encompassed with divinities." Thus wrote Mr. Emerson in his chapter on Montaigne, in *Representative Men*. In every new discovery which he eagerly heard from his friends, scholars or workers in science, he saw the Law working surely and beautifully. In his first book on Nature he said that she echoes the Ten Commandments. His later essays testify the same, and he said: "For other things, I make poetry of them, but the moral sentiment makes poetry of me."

Hence it was a theme to which he constantly recurred. The material for this essay, which was printed in the *North American Review* of May, 1878, was drawn from several lectures, especially "Morals," given at Freeman Place Chapel, in 1859, "The Essential Principles of Religion," before Theodore Parker's Society at the Music Hall in 1862, "The Rule of Life" and "Natural Religion" at Horticultural Hall respectively in 1867 and 1869, and possibly

from others. Mr. Cabot made the best mosaic that he could, and it received Mr. Emerson's approval, but, as he said in his prefatory note to *Letters and Social Aims*, with regard to "Immortality," it contains passages written at periods far apart from one another.

N2384: The charm which Oersted's discovery of Polarity had for Mr. Emerson appears in all his writings:—

The journeying atoms,
Primordial wholes,
Firmly draw, firmly drive
By their animate poles.

"The Sphinx."

The lecture on the Essential Principles of Religion has a similar beginning:—

"The great physicists have signified their belief that our analysis will reach at last a sublime simplicity, and find two elements, or one element with two polarities, at the base of things; and in morals we are struck with the steady return of a few principles: we are always finding new applications of the maxims and proverbs of the nursery."

N2385: There is a little fable, in Scottish dress, on the grub and butterfly, in the Appendix to the *Poems*, beginning,—

Have ye seen the caterpillar
Fouly warking in his nest?

N2386: This suggests Thoreau's remarks,—that there is no greater blunderer than the man who consumes the best part of his life *getting a living*, and that *you must get your living by loving*.

N2387: From Keats's *Hyperion*.

N2388: Quoted from Goethe.

N2389: This, in the journal, is quoted from Pellet's account of Napoleon's speeches in council.

N2390: This paragraph in its first part recalls those in the essay on Fate (*Conduct of Life*, pp. 48, 49), and in its ending suggests the image in "The World-Soul":—

The patient Dæmon sits,
With roses and a shroud;
He has his way, and deals his gifts,—
But ours is not allowed.

N2391: In "Voluntaries," as first published, at the end of the fourth stanza, were lines omitted in the later version, telling how

The erring foe,
Self-assured that he prevails,
Looks from his victim lying low,
And sees aloft the red right arm
Redress the eternal scales.

N2392: The following is from a sheet that perhaps was in the lecture "Worship":—

"But what is it? What is pure spirit? Here we feel that we have no language, that words are only auxiliary and not adequate: are suggestions, and not copies of our cogitation. We worship it; we beseech it to inhabit us, not with words, but, as one said, 'with groanings that cannot be uttered.' We call it not a person. That would cripple and profane our thought. We deny to it personality because that is too little, not too much. It is within all persons. It is the Reason of Reason, the Love of Love, the Life of Life."

"When we have broken our god of tradition and ceased from our god of rhetoric, then may God fire the heart with his presence."—"The Over-Soul."

N2393: From the diary of Miss Mary Moody Emerson. This sentence is poetically rendered in "The Nun's Aspiration," the poem which is used for the motto to the sketch of her life in this volume.

N2394:

If the Law should thee forget,
More enamoured, serve it yet.

"The Poet," *Poems*, Appendix.

N2395: This passage about floating with the stream of power and wisdom, and that which follows it about the abdication of choice, are very like those in "Spiritual Laws," *Essays, First Series*, pp. 138, 139.

N2396: In his Address to the Divinity Students, speaking of Jesus, Mr. Emerson said: "He spoke of miracles; for he felt that man's life was a miracle, and all that man doth, and he knew that this daily miracle shines as the character ascends. But the word Miracle, as

pronounced by Christian churches, gives a false impression; it is Monster. It is not one with the blowing clover and the falling rain."

In the verses on the Poet, he is spoken of as

Born and nourished in miracles.

N2397: Ygdrasil in the Norse mythology.

N2398: "'Mere morality'—which is much as if one should say, 'Poor God, with nobody to help him.'" See "Worship," *Conduct of Life*, p. 215.

N2399: Contrasting the decorously negative position of Boston Unitarianism with the rude and searching, yet human, eloquence of Father Taylor the Methodist, and the fervid Calvinism of his Aunt Mary, Mr. Emerson once used the expression "the corpse-cold Unitarianism of Brattle Street." In his journal of 1837, he said: "When the conversation soars to principles, Unitarianism is boyish."

N2400: This expression of a certain sympathy with a religious attitude which he could no longer hold recalls the opening and closing lines of "The Problem."

N2401: Compare in the *Poems* the lines in the second "Woodnotes,"—

Him Nature giveth for defence

His formidable innocence,—

and those in one of the "Fragments on the Poet,"—

But over all his crowning grace,
Wherefor thanks God his daily praise,
Is the purging of his eye
To see the people of the sky:
From blue mount and headland dim
Friendly hands stretch forth to him, etc.

N2402: Ormuzd and Ahriman, in the Dualism of the Persian religious philosophy, represented the principles of Good and Evil; Mr. Emerson's poem "Uriel" describes, in celestial imagery, the shock that the heresy of the possibility of Good coming out of Evil produces in the minds of some churchmen.

THE PREACHER

IN MAY, 1867, Mr. Emerson read a discourse called "The Rule of Life" before the Radical Association in Boston. It contained matter which was later used in "Sovereignty of Ethics" and in a lecture called "The Preacher" which he gave at the house of Rev. J. T. Sargent in Boston, in the following September. In May, 1879, he read at Divinity Hall Chapel, in Cambridge, a lecture called "The Preacher," which, beside what had been read at Mr. Sargent's, contained some passages from the lectures "Cause and Effect," given in 1861, and "Health," in 1862, both in Boston. "The Preacher" was first published in *The Unitarian Review* for January, 1880.

Mr. Emerson recognized fully the difficulties that beset the Preacher—the same which took him out of the pulpit for the greater freedom of the lecturer's desk—but he made it easier for the next generation. He did as he counselled others: "Be an opener of doors to those who come after you, and don't try to make the Universe a blind alley."

"In Religion the sentiment is all, the ritual or ceremony indifferent."

In the journal of 1838 he wrote: "A sermon, my own, I read never with joy, though sincerely written; an oration, a poem, another's or my own, I read with joy. Is it that from the first species of writing we cannot banish tradition, convention, and the last is more easily genuine? Or is it that the last being dedicated to Beauty, and the first to Goodness, to Duty,—the spirit flies with hilarity and delight to the last; with domestic obligation and observance only to the first? Or is it that the sentiment of Duty and the Divinity shun demonstration and do retreat into silence; they would pervade all, but they will not be unfolded, exhibited apart, and as matter of science?"

N2403: In writing of Gibbon, Mr. Emerson lamented that, with his extraordinary gifts and accomplishment, "the man had no shrine,"—a man's most important possession, he held.

N2404: This passage was written in 1837.

N2405: Mr. Emerson used to tell that some eminent Frenchman, when asked what his religion was, answered, "Oh, I am of the religion of all sensible men." "And what is that?" said his questioner. "Sensible men never tell," was the answer.

N2406: Wordsworth's sonnet "Steamboats, Viaducts and Railways."

N2407: In one of the lectures this paragraph was followed by—

"The old psalms and gospels are mighty, as ever showing that what people call religion is literature; that is to say, that here was one who knew how to put his statement, and it stands forever, and people feel its truth,

and say, *Thus saith the Lord*; whilst it is only that he had the true literary genius which they fancy they despise....

"Bibles. A bible is a collection of formulas to express the inevitable moral facts. It is the record of the experience and aspiration of the wisest and most religious minds,—of the saints of each nation. Of course it will not be ended until the Creation is. Each nation has its own, and of course it is dear to every tender soul, and preferred to every foreign bible, because it is identified with the aspirations and affections of the people and gathers with time a miraculous repute. But with advance of civilization liberal minds discover there are as good or better bibles in other nations, that affirm in other languages the selfsame aspirations, and they gradually enrich their national bible with the best texts from these.

"What happens to nations, happens in each nation earlier to sects. Sects are stoves of a hundred different patterns; but fire keeps its old properties indifferently in them all.

"I think the weapons we oftenest use are artificial, and that our strongest weapons are natural. Thus our talent and our worldly breeding or manners are the arms on which we rely. 'T is a kind of war-paint with which we hope to impress each other and which everybody must put on. And the established religion of our age and country, which by that very fact admits that it is not an enthusiasm, not an intuition, but a doctrine or tradition, of course is a part of this armor; and men are clothed and shod and gloved with these customs, these externalities, and slide along on these arts from year to year, accepting all they find, originating nothing, until at last they depart out of life without using their original force."

N2408: "The difference between religion and ethics. There is but one divine element feeding, vivifying all minds. Men, in the moment of its inspirations, are sensible of this unity. But in the off-hours, in this kingdom of custom in which they live, they distinguish between religion and ethics, as if ethics meant my own perception

of right and wrong,—but religion always some other man's. My belief in eternal justice and the rule of right is ethics or morals; but Jesus' or Moses' belief is religion."

Among the stray sheets is this on Religion, which may here be inserted:—

"In children the instinct is specially strong. That lawyer, *Talent*, requires age, experience, ingenuity; but children rest in this native oracle which makes them so much wiser than their sires, who have lost it. What eye-waters all the virtues are! humility, love, courage, and what a blind-man's-buff is conceit!"

N2409: Ποῦ στῶ—"Somewhere to stand," a condition which Archimedes required of King Hiero before undertaking to move the world with his mechanical contrivances.

N2410: "All of us can understand justice, but few have a taste for theology. Theology is the rhetoric or the technical distribution of conscience."—Lecture-sheets.

N2411: This passage, omitted in the essay, was in the lecture:—

"Meditate; let the thought have free course; and delight yourself in each new result and intimation....But the strict condition of success is,—not to build too much on what is already built. Let that alone, and it will let you alone. All your inspirations will come only for what is native to you. You have been struck, in your casual intercourse with obscure people, by some trait of charity, or self-command, of persistency, which was new as the last sunbeam, not taught him or her who showed it, not quoted, not imitated. You dwell upon it, magnify it, as if there were nothing else: as if it contained all virtue. Well, you are right: domesticate that; bear down

upon it; it will bear up thee, me and all nature, as easily as a scrap of down. For all the virtues are sisters, and that which comes to you in this native way is representative of all,—is the door which God opens for you to all the heaven.

"Couture's rules of drawing are swiftly translatable into rules of writing. 'Draw directly or actually a perpendicular and a horizontal line through the centre of the object.' Now suppose the theme was Cambridge, or Andover; *actually* to draw the lines would be to name them: *ideally*, to hint them by suggestive description. The perpendicular line would be their relation to truth; the horizontal, their relation to the world around them. Couture proceeds,—'Half close the eyes and look at the object long: find where is the strongest light, and the degrees of light, and thus see only the masses, without the details. Then do the like to see where is the strongest shadow, and the less strong. Draw these with vigor. Keep three quarters of your eye on Nature, and only one quarter on your work.'¹⁰⁹ Now apply these rules to your writing. 'Half close the eyes and look at the object long and find the strongest light.' That is—Don't think of your chamber, or boarding-house, or the daily routine of life or instruction, but search your memory for the happiest passages, the best thought, the best intercourse, some crowning result that has characterized the curriculum or the society, the height of hope, the fruitfulness truth—then you have the strongest light, and minor lights, and will see masses and not details."

N2412: He here mentions a main secret of his own success.

N2413: Here followed in the lecture this sentence:—

"And I should think it praise enough of the friends I speak to, if they now again, as the Quakers of old, brought back their age to see the simplicity

¹⁰⁹ These are quoted from *Méthode et Entretien d' Atelier*, by Thomas Couture.

of Divine Action, that Heaven does not come with libraries in his hand, but repeats the whole commandment to each mind."

N2414: The following sentence here came in:—

"But let passing events suggest the theme which we will carry out of its trivial limits by lifting it to the measure of duty and of our destiny."

N2415: This is a part of the counsel given to Osiris by his father, as told in *A Treatise on Providence* by Synesius. It is included in the same volume with Thomas Taylor's translation of Plotinus.

N2416: Mr. Emerson's exhortation to the young divines, in his Address in 1838, may fitly end the notes on "The Preacher." "Yourself a new-born bard of the Holy Ghost, cast behind you all conformity and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure and money are nothing to you,—are not bandages over your eyes, that you cannot see,—but live with the privilege of the immeasurable mind. Not too anxious to visit periodically all families and each family in your parish connection,—when you meet one of these men or women, be to them a divine man; be to them thought and virtue; let their timid aspirations find in you a friend; let their trampled instincts be genially tempted out in your atmosphere; let their doubts know that you have doubted, and their wonder feel that you have wondered. By trusting your own heart, you shall gain more confidence in other men. For all our penny-wisdom, for all our soul-destroying slavery to habit, it is not to be doubted that all men have sublime thoughts; that all men value the few real hours of life.... Discharge to men the priestly office, and, present or absent, you shall be followed with their love as by an angel."

THE MAN OF LETTERS

ON JULY 22, 1863, Mr. Emerson, by the invitation of the literary societies of Dartmouth College, read an address on a theme always dear and fresh to him, the happiness and privilege of the Scholar, who, he said there, "has drawn the white lot in life." On August 11, he repeated the address at Waterville College in Maine.

The essay here published is that address, with a new title to distinguish it from the next, which is of the same character. Its length shows that it is only a portion of the address as delivered, having been plundered of its sheets for the benefit of other essays. Probably "The Scholar" contains some of them.

N2417: In his Williams College address in 1854, speaking of the "practical" man of trade, "the walking ledger," Mr. Emerson said:—

"He knows the conditions of vulgar success,—that a devotion to means without reference to any end is the sole safe method. But he has not been able to hide from himself that this is an absurdity,—he is prescribing amputation for headache,—is, for a livelihood, to defeat the ends of living; and it is out of the wish to preserve sanity in time to come; to find out how

the minor propositions may be established without throwing overboard the major proposition;...that he has said, 'Let there be schools, a clergy, art, music and poetry.'

N2418:

Earth smiled with flowers, and man was born.

On the wind-blown sea-marge bleak,

.

Forward stepped the perfect Greek.

"Solution," *Poems*.

N2419: Of the Puritan fathers Mr. Emerson says, in his lecture "Boston," *Natural History of Intellect*, "They were precisely the idealists of England; the most religious in a religious era. An old lady who remembered these pious people said of them that 'they had to hold on hard to the huckleberry bushes to hinder themselves from being translated.'"

N2420: Compare what is said of *Faust* in the chapter on Goethe, in *Representative Men*.

N2421: "Life should not be prosaic. The reason why it is, is because it is false and violates the laws of the mind. Life tends ever to be picturesque, and, on the entrance of a genial and superior friend, becomes so."—Stray sheet on Beauty.

N2422: Journal, 1856. "What's the use of this prostitution of literature? Art lies not in trying to make an obscure thing prominent, but in choosing what is really eminent, and showing its eminence. You can't write up what gravitates down."

N2423: Journal, 1832. "'I teach by degrees,' says Landor's Epicurus. 'It is not the will, but the necessity of the wise. None are wise enough to teach otherwise. All this pedantry about the people's not bearing the whole truth,—what else does it mean, than that the teacher has not yet arrived at the safe, that is, the *true* statement of the particular doctrine which he would oppose to the ruling error.' He knows in general there is an error; he has not yet found its boundary lines."

N2424: From Wordsworth's "Laodamia."

N2425: Compare in the "Boston Hymn" the lines beginning—

Lo! I uncover the land.

N2426: In the year 1863 Mr. Emerson was appointed a member of the committee to visit and report on the United States Military Academy at West Point. He was greatly pleased with all he saw there, especially the manly and honorable tone of the cadets, and the simple life and self-help required by the discipline of the Academy.

N2427: Journal, 1837. "I thought, as I rode through the sloughs yesterday, that nothing is more untrue, as well as unfavorable to power, than that the thinker should open his mind to fear of the people among whom he works. Rather let him exult in his force. Whichever way he turns, he sees the pleasure and deference which these faculties of writing and speaking excite."

N2428: In the decadence of public morality during the period between the Mexican and Civil wars, Mr. Emerson's note-books

had many entries tracing the lapses in literature, art, the learned professions, especially among the clergy, and in citizenship and statesmanship all to one root—skepticism, abandonment of the ideal.

N2429: “The man of genius is he who has received a larger portion of the common nature. He apprises us not so much of his wealth as of the common wealth. Are his thoughts profound? So much the less are they his, so much the more the property of all.”—Lecture on Society, course of 1836–37.

N2430: “To stand for the private verdict against popular clamor is the office of the noble. If a humane measure is propounded in behalf of the slave, or of the Irishman, or the Catholic, or for the succor of the poor; that sentiment, that project, will have the homage of the hero. That is his nobility, his oath of knighthood, to succor the helpless and oppressed; always to throw himself on the side of weakness, of youth, of hope; on the liberal, on the expansive side, never on the defensive, the conserving, the timorous, the lock-and-bolt system. More than our good will we may not be able to give. We have our own affairs, our own genius, which chains each to his proper work. We cannot give our life to the cause of the debtor, of the slave, or the pauper, as another is doing; but to one thing we are bound, not to blaspheme the sentiment and the work of that man, not to throw stumbling-blocks in the way of the abolitionist, the philanthropist; as the organs of influence and opinion are swift to do.”—“The Young American,” *Nature, Addresses and Lectures*.

N2431: Yet with all his interest, as citizen and patriot, in the political struggles of his day, and the War for Freedom and Union

that resulted, he never let the dust of party strife obscure the sidereal heavens, and he feared lest the youth, in the strife over transient issues in their day, lose a true sense of perspective for the great laws. The following is from a sheet which has done duty in lectures like the present:—

“The true question is, how to reach and detain truth,—and the quite secondary question is the position of affairs to-day. I say, Beware of the last question. Give it no thought; leave it to the journals and the gossips. The only firm ground is, *What truth interests you, attracts you*, how far have you penetrated it. Happy is he whose thought interests him,—whose book is sweet to him, and makes him forget the time,—forget or despise the cold, the smoke, or whatever inconvenience. Our real benefactors are not those who gave us money or hospitality, but those who brought us acquainted with Plato, with Milton, with Herbert, Antoninus, Taylor, with the great lords of the spiritual world, whether intellectual or ethical; who spoke to the conscience and to the reason, imagination; who made our ears and memories rich with imperishable thoughts.”

THE SCHOLAR

AT THE time when the invitation came to Mr. Emerson from the Senior Class at the University of Virginia to address them on the occasion of their graduation,—the first invitation which had come to him from any Southern college,—he was no longer able to write an oration. But this call from the young men of the South was one of peculiar interest, one which it might seem ungracious to refuse, and all through life he had been writing to and for scholars. By Mr. Cabot's kind and ready help a suitable arrangement was made of sheets on the subject, many of which had, of course, done duty in earlier college addresses.

N2432: In the journal of 1851, Mr. Emerson wrote of Beauty: "It is a privilege....Indeed all privilege is that of Beauty, for there are many Beauties: 1, of face; 2, of form; 3, of manner, not less prevailing; 4, of brain or method—the sphere changes with the mode, and the sphere of brain or method is elemental, and lasts long,—Shakspeare's, Raphael's, Michel Angelo's is the Beauty of Brain or Method."

N2433: Mr. Charles J. Woodbury relates that Mr. Emerson, talking with him in his student days of the American historians, commended their mastery of their subjects, but lamented their mechanical quality and lack of style. He said, "They have no lilt in them. You noticed the marble we have just seen. You remember that marble is nothing but *crystallized* limestone? Well, some writers never get out of the limestone condition. Be airy. Let your characters breathe from you. Walk upon the ground, but not to sink. It is a fine power this. Some men have it, prominently the French. How it manifests itself in Montaigne...and in Urquhart's Rabelais! Grimm almost alone of the Germans has it; Borrow had it; Thoreau had it; and James Wilson—sometimes."¹¹⁰

N2434: It is a pleasure to give here Mr. Emerson's words about another scholar of a far different type, yet who has written so well of him—Dr. Holmes:—

"What shall I say of his delight in manners, in society, in elegance, in short, of his delight in *Culture*, which makes him a civilizer whom every man and woman secretly thanks for valuable hints?

"What then of his correction of popular errors in taste, in behaviour, in the uncertain sciences, and in theology, attested by the alarm of the synods, and this is only possible to the man who has the capital merit of healthy perception, who can draw all men to read him; whose thoughts leave such cheerful and perfumed memories, that when the newsboy enters the car, all over the wide wildernesses of America the tired traveller says, 'Here comes the Autocrat to bring me one half hour's absolute relief from the vacant mind.'"—Notes in Journal for speech at the dinner to Dr. Holmes on his Fiftieth Birthday, August 29, 1859.

¹¹⁰ *Talks with Ralph Waldo Emerson*. New York: Baker & Taylor, 1890.

N2435: This address cannot but recall others on the same theme. The following passage is from the Address "Literary Ethics," given at Dartmouth College in 1838:—

"Neither years nor books have yet availed to extirpate a prejudice then rooted in me, that a scholar is the favorite of Heaven and earth, the excellency of his country, the happiest of men. His duties lead him directly into the holy ground where other men's aspirations only point. His successes are occasions of the purest joy to all men. Eyes is he to the blind; feet is he to the lame. His failures, if he is worthy, are inlets to higher advantages....The public can get public experience, but they wish the scholar to replace to them those private, sincere, divine experiences of which they have been defrauded by dwelling in the street."

And the following sentence from Mr. Emerson's Address to the Divinity Students, in the same month, may be added:—

"What hinders that now, everywhere, in pulpits, in lecture-rooms, in houses, in fields, wherever the invitation of men or your own occasions lead you, you speak the very truth, as your life and conscience teach it, and cheer the waiting, fainting hearts of men with new hope and new revelation?"

N2436: For Nature's method of teaching by allurements and surprises, see the two "Nature" poems and the quatrain thus called.

N2437: "The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that which men in crowded cities find true for them also. The orator distrusts at first the fitness of his frank confessions, his want of knowledge of the persons he addresses, until he finds that

he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds this is the most acceptable, most public, and universally true. The people delight in it; the better part of every man feels, This is my music; this is myself. In self-trust all the virtues are comprehended. Free should the scholar be,—free and brave.”—“The American Scholar,” *Nature, Addresses and Lectures*.

N2438: Mr. Emerson copied as a motto this line of Ossian: “Cathmore dwelt in the wood to avoid the voice of praise.” He wrote in his journal, of his ideal man, “I will add to the portrait of Osman that he had never to look after his fame and his compliments, his claps and his editions.”

N2439: In the “Fragments on the Poet,” stanza IV., is told the far-reaching power of the random word which the listener hears from the Muse, feigning to speak to another.

N2440: “Almack’s” was a suite of assembly-rooms in King Street, St. James’s, London, built in 1765 by MacCaul, the valet of a Scottish nobleman, who reversed his name when he came to London and became a tavern-keeper. From 1765 to 1840 balls were held at Almack’s under the management of a committee of ladies of rank. “The circle having admission to balls at Almack’s was, at the beginning of the century, regarded as the seventh heaven of the fashionable world.” The rooms were not closed until 1890.

N2441: Compare what is said of the labor due from the Scholar in the essay on Greatness, *Letters and Social Aims*, p. 311.

N2442: Usually in his writings, as in this essay, two pages later, Mr. Emerson warns against talent, meaning thereby self-exhibition, but here the word seems used in the sense of successful expression.

N2443: "Men of talent sometimes seem to me sepulchres in which vices are entombed with architecture and praise,"—Lecture-sheet.

N2444: "The man whose part is taken and who does not wait for society in anything, has a power which society cannot choose but feel. The familiar experiment called the hydrostatic paradox, in which a capillary column of water balances the ocean, is a symbol of the relation of one man to the whole family of men."—"New England Reformers," *Essays, Second Series*.

N2445: Journal, 1841. "No man can write anything who does not think that what he writes is for the time the history of the world, or do anything well who does not suppose his work to be of greatest importance. My work may be of none, but I must not think it of none, or I shall not do it with impunity. Whoso does what he thinks mean is mean."

N2446: "The scholar will feel that the richest romance, the noblest fiction that was ever woven, the heart and soul of beauty, lies enclosed in human life. Itself of surpassing value, it is also the richest material for his creations. How shall he know its secrets of tenderness, of terror, of will, and of fate? How can he catch and keep the strain of upper music that peals from it? Its laws are concealed under the details of daily action....He must bear his share of the common load....Out of love and hatred, out of earnings, and borrowings, and lendings, and losses; out of sickness

and pain; out of wooing and worshipping; out of travelling, and voting, and watching, and caring; out of disgrace and contempt, comes our tuition in the serene and beautiful laws. Let him not slur his lesson; let him learn it by heart. Let him endeavor exactly, bravely, and cheerfully, to solve the problem of that life which is set before *him*. And this by punctual action, and not by promises or dreams."—"Literary Ethics," *Nature, Addresses and Lectures*.

N2447:

The hero is not fed on sweets,
Daily his own heart he eats;
Chambers of the great are jails,
And head-winds right for royal sails.

"Heroism," *Poems*.

N2448: Mr. Emerson, in a letter to a friend, said:—

"It happens to us once or twice in a lifetime to be drunk with some book which probably has some extraordinary relative power to intoxicate *us* and none other: and having exhausted that cup of enchantment we go groping in libraries all our years afterward in the hope of being in Paradise again. But what better sign can the genius of our times show that the old creative force is ready to work again, than the universal indisposition of the best heads to touch the books even of name and fame?"

N2449: "Strength and spirits are wasted in rejection. But the strong spirits overpower those around them without effort. Their thought and emotion comes in like a flood, quite withdraws them from all notice of these carping critics; they surrender themselves with glad heart to the heavenly guide, and only by implication

reject the clamorous nonsense of the hour. Grave seniors talk to the deaf,—church and old book mumble and ritualize to an unheeding, preoccupied and advancing mind, and thus they, by happiness of greater momentum, lose no time, but take the right road at first.”—“The Transcendentalist,” *Nature, Addresses and Lectures*.

PLUTARCH

DR. HOLMES said, in his Memoir of Mr. Emerson, that "the Essay on Plutarch has a peculiar value from the fact that Emerson owes more to him than to any other author except Plato, who is one of the only two writers quoted oftener than Plutarch. *Mutato nomine*, the portrait which Emerson draws of the Greek moralist might stand for his own." There is much truth in this remark. Throughout Plutarch's writings the gracious and humane personality is singularly apparent, and the reasons of this sympathy across the centuries are plain.

Mr. Emerson as a boy read Plutarch, and never tired of this early friend. When I was fourteen years old, he put *Plutarch's Lives* into my hand and bade me read two pages every week-day and ten every holiday. It seemed at first an irksome task, but my mother asked me to read them aloud to her, and this made it easier. Lyncurgus's training of the Spartan boys, Archimedes's amazing military engineering in the defence of Syracuse, Hannibal's passage of the Alps, Scipio's magnanimity and Cæsar's courage and genius won their own way, as my father knew they would with a boy, and, what is by no means common with authors, the personality of the writer

also, as, for instance, where he drops the narrative to hotly censure the meanness of Cato the Elder in selling his slaves when they were past service. The style of Plutarch could commend itself even to a boy. Mr. Emerson loved the racy English of Morgan's edition of the *Morals* of 1718, and while sure of the accurate scholarship of Professor Goodwin in his revision of the work, I think interceded with him in advance to save the old English phraseology where possible, which was done. The correction of the inaccuracies, often gross, and the clearing up of obscurities by Professor Goodwin gave him, as he says in the essay, great pleasure.

He was sure that Plutarch was as good reading for to-day as for men or boys nineteen centuries ago. He wrote, "When I read Plutarch, or look at a Greek vase, I am inclined to accept the common opinion of the learned, that the Greeks had cleaner wits than any other people. But there is anything but time in my idea of the Antique. A clear and natural expression by word or deed is that which we mean, when we love and praise the Antique. In society, I do not find it; in modern books, seldom; but when I come into the pastures, I find antiquity again. Once in the fields with the lowing cattle, the birds, trees, waters, and satisfying curves of the landscape, and I cannot tell whether this is Thessaly and Enna, or whether Concord and Acton."

N2450: Jacques Amyot (1513–1593), a youth of humble parentage, went to the College of France, and there underwent great privations in his zeal for learning. He soon after was made Professor of Greek and Latin at the University of Bourges. He there translated some of Plutarch's *Lives*, which he dedicated to Francis I., who was so much pleased that he gave him the revenues of the Abbey of Bellezane. Amyot's dream was to translate Plutarch, and he went to Italy in the train of certain prelates to see the best texts.

Henry II. made him tutor to his two sons, later Charles IX. and Henry III., and for his success and his translations of Plutarch's *Lives* and *Morals* made him grand almoner and Bishop of Auxerre. This necessitated his temporarily leaving the study of the Pagan writers to learn a little divinity. His royal pupils befriended him, but in the time of the League sad reverses befell him.

N2451: Jeanne D'Albret, queen of Navarre, of whom it was said that she was "a princess with nothing of the woman but the sex, with a soul full of everything manly, a mind fit to cope with affairs of moment and a heart invincible in adversity."

N2452: *La Cité Antique*, by Coulanges, is the work here alluded to.

N2453: Probably the chapter which Mr. Emerson had to skip because of its technicality was the one "Concerning Music."

N2454: This is a favorite doctrine of Mr. Emerson's, appearing in many places, especially in "Quotation and Originality" (*Letters and Social Aims*), that a good quoter acquires some rights in the original. Speaking of Shakspeare's borrowings, in *Representative Men*, he said, "A great poet who appears in illiterate times absorbs into his sphere all the light which is anywhere radiating."

N2455: This recalls the paper by Oscar Wilde "On the Decay of Lying," a suggestive article on Art, in spite of the whimsical form in which it is clothed.

N2456: Mr. Emerson spoke in "The Over-Soul" of "that flowing river which, out of regions I see not, pours for a season its streams into me." See also the poem, "The Two Rivers."

N2457: This passage is one of those in which the likeness spoken of by Dr. Holmes between Plutarch and Emerson is conspicuous, the latter eager for all facts the naturalist could give, but using them as keys to higher laws.

N2458: In the journal, Mr. Emerson quotes Clough's choice,—
"Plutarch's best life is Antony, I think."

N2459: This is characteristic of Mr. Emerson. He willingly gave to *proper persons* letters of introduction, but he almost never used them. He said, "My practice is to go to the inn in the town where the person I wish to see lives and send a note to him thence. He can judge by the note whether I am a person he cares to see, or no."

N2460: This phrase pleased Mr. Emerson; he used it, slightly modified, in the first stanza of "The Poet," where the verse

Fell unregarded to the ground,
Unseen by such as stood around.
The pious wind took it away,
The reverent darkness hid the lay.

N2461: Journal, 1860. "Plutarch, the elixir of Greece and Rome,—that is the book which nations want to compose. If the world's library were burning, I should as soon fly to rescue that as Shakspeare and Plato, or next afterwards."

HISTORIC NOTES OF LIFE AND LETTERS IN NEW ENGLAND

IT IS remembered in the family that this paper was not a mosaic of many notes taken at different times, but that most of it was continuously written, and with enjoyment, by Mr. Emerson, probably about the year 1867, for one or more lectures. His daughter remembers her father's saying, with a smile of amusement, "I believe I must put in Brook Farm." He was afraid that it might be a little early to do so, and this portion must have been read as a parlor lecture. "Historic Notes" was published in the *Atlantic Monthly* for October, 1883.

N2462: The tendencies of that epoch are also described in the essays on the Transcendentalist and on New England Reformers.

N2463: Mr. Emerson could not like *Faust*, could never feel that the poet was justified in meddling with "the Negative." He expresses himself further upon the poem in the chapter on Goethe in *Representative Men*, and in the division "Morals" in "Poetry and Imagination," in *Letters and Social Aims*, and in the "Man of Letters" in this volume.

He valued much the work by Professor James Hutchison Stirling, of Edinburgh, *The Secret of Hegel*.

N2464: Dr. Jacob Bigelow, eminent both as physician and botanist, had at this time introduced a healthy skepticism among the physicians of Massachusetts as to the power of drugs over disease, much to the advantage of the practice of that day of heroic treatment in which mediæval methods and prescriptions lingered; and soon after, the young Dr. Oliver Wendell Holmes became a formidable and useful critic as to the ways and beliefs of the profession; both of these writers clearing the ground for a more rational and scientific practice.

N2465: As is shown in his chapter on Swedenborg, in *Representative Men*, Mr. Emerson's value for the high symbolism of the seer did not blind him to his sombre and tedious monotony. In an early poem he laments that a friend should cower before

The phantoms
One self-deceiving mystic drew in swarms
Wherever rolled his visionary eye,
The Swedish Pluto of a world of ghosts,—
Eyes without light, men without character,
Nature a cave of theologians.

N2466: Mr. Cabot says in the Memoir that the enthusiasm of admiration felt by the young Emerson for Everett subjected him to the ridicule of his more prosy classmates, and adds: "The admiration had begun earlier, when Everett was preaching in Boston, and Emerson (as he told me) and his brother Edward used

to go on Sunday and peep into the church where their favorite was expected to preach, to make sure that he was in the pulpit."

In a letter to his classmate, John B. Hill, he wrote, the year after their graduation: "I have been attending Professor Everett's lectures, which he has begun to deliver in this city, upon Antiquities. I am as much enamoured as ever with the incomparable manner of my old idol, though much of his matter is easily acquired from common books. We think strong sense to be his distinguishing feature; he never commits himself, never makes a mistake."

N2467: From this paragraph it appears that very possibly the Lyceum system, which, starting from the Northern seaboard, spread speedily throughout the Middle and Western States, though it seemed unable to pass Mason and Dixon's line, owed much of its initial success to Everett. To the Lyceum the wide spreading of Mr. Emerson's influence was largely due, for all of his essays were originally spoken face to face to the men and women of his country.

N2468: Rev. Nathaniel L. Frothingham, pastor of the First Church in Boston and, earlier, instructor in Rhetoric and Oratory at Harvard College, was friendly to Mr. Emerson and seems to have been one among the older clergy who was not wholly shocked by the Divinity School Address. He was a member of the Transcendental Club in 1836.

Professor Andrews Norton held the chair of Biblical Literature in the Divinity School of Harvard College. Mr. Cabot spoke of him as "a man of acute intellect and a commanding personality, and, I suppose, the foremost theologian of the Liberal Christians."

N2469: Of discoveries in astronomy and its great laws Mr. Emerson only knew from his reading, but he was fortunate in having for his brother-in-law Dr. Charles Thomas Jackson, educated in Paris, and an accomplished chemist and geologist in the modern advance of these sciences. He made the first geological surveys of many of the States, and was the first to examine and make scientific report on the great mineral resources of the Lake Superior region. Mr. Emerson frequently enjoyed his brilliant conversation in his laboratory in Boston and during Dr. Jackson's visits to his sister, Mrs. Emerson, in Concord.

N2470: With Dr. Channing, who was installed as pastor of the Federal Street Church in Boston the year that Emerson was born, he always had the kindest relations, felt in youth his influence, and later preached in his pulpit by invitation. Rev. John W. Chadwick in his life of Channing¹¹¹ says, "We do not wonder at Emerson's delight in Channing when we read this superb anticipation of his own 'Self-Reliance' [Dr. Channing's address on Spiritual Freedom]."

Mr. Emerson wrote, "In our wantonness we often flout Dr. Channing and say he is getting old. But as soon as he is ill, we remember he is our bishop, and that we have not done with him yet."

N2471: Dr. Francis was a Unitarian clergyman of wide sympathies and genial character, brother of the charming and typical New England woman, Mrs. Lydia Maria Child, the authoress and reformer of the best type.

¹¹¹ William Ellery Channing, *Minister of Religion*. By John W. Chadwick. Boston: Houghton, Mifflin & Co., 1903.

Dr. Frederic H. Hedge, a clergyman first in Bangor, Maine, then in Brookline, Massachusetts, studied in Germany and was a student of German literature, but especially of philosophy.

Rev. Orestes A. Brownson, born the same year with Mr. Emerson, was a marked reformer in his day. Beginning life as a Universalist preacher, he became strongly interested in the schemes for social reform of the Englishman, Robert Owen, and in 1828 organized the Working Men's Party in New York. After coming under Dr. Channing's influence he became a Unitarian clergyman, and soon after formed the Society for Christian Union and Progress, and preached for them for several years. He supported, and for the most part wrote, certain magazines to propagate his beliefs. In 1844 he became a Catholic, and not long after was offered a chair in the University of Dublin by Dr. John Henry Newman, but declined it.

Rev. William Henry Channing, near in kindred to Dr. Channing, was a man high-minded, enthusiastic, and beautiful in character. He was the contemporary and friend of James Freeman Clarke, with whom he was associated in the publication of the *Western Messenger* in Cincinnati, and with him and Mr. Emerson in writing the life of Margaret Fuller. He was, during the Civil War, pastor of a Unitarian church in Washington, and later lived in England, where he preached to a society in London.

The pure idealist mentioned in the end of the paragraph is, of course, Mr. Alcott.

N2472: The following stray sheets from a lecture on this subject are here introduced because of the allusion to Mr. Alcott in the latter part:—

"Every man, in the degree in which he has positive convictions, is continually disappointed in his acquaintance with men. He is searching in

the crowd for types of these convictions. Of course he does not find them easily. He goes to England: but where are the extraordinary individuals? He meets a great many trifling persons with foolish sounding voices, but not easily those mighty men, unrivalable by Americans, he looked for among the Milmans, Macaulays, Milnes, Disraelis, Wilsons. Yes. What then of Wordsworth? Landor? Carlyle? Tennyson? Well, these are as exceptional there and admired as here, and perhaps disdainful of the mediocrity of their several circles. And the young traveller is struck even more than at home—(perhaps it is his fault of false expectation and his own unfitness)—at the poverty and limitation.

"Not the less is it true, that each man comes into the world timed and accompanied by just conditions and associates,—no matter how self-sufficing or how *exigean*t he is. 'T is certain that to each of us the loss of a few persons would be most impoverishing,—a few persons who give flesh to what were else mere thoughts and which now he is not at liberty to slight, or in any manner treat as fictions. He cannot treat Platonism as cloud-land, if he knows a Platonist who makes the theory as solid to him as Massachusetts. He cannot hold Stoicism impossible if he has before him a Stoic in flesh and blood with pertinacious Saxon belief, and Saxon performance. Nor hold Pythagoras to be mythical, if he finds at his door the like urgent organizer of association."

In the passage following the above, Mr. Emerson seems to be speaking of the inability which he always felt to satisfy the hope and desire of friends of warmer temperament:—

"But when one of the Dorians conversed with one of the Persians, it was a great disadvantage to the last. For the native coldness of the Dorian so contrasted with the heat of the other, that it seemed rigor and austerity. 'I ought never to converse with you,' said the Dorian, 'since to love and to hate, to live and to die, seem to me no more than to walk out into the

road and return hither, whilst to you they are passionate occasions, and the bare mention of these words excite you to joy and despondency."

N2473: Journal (about 1840). "The view taken in State Street of Transcendentalism is that it threatens to invalidate contracts."

N2474: For further information concerning the Transcendental epoch, see Mr. Cabot's *Memoir of Emerson, Transcendentalism in New England*, by the Rev. Octavius B. Frothingham, and in Mr. George W. Cooke's life of Mr. Emerson the chapter "The Era of Transcendentalism."

N2475: In the *Familiar Letters of Thoreau*, edited by Mr. F. B. Sanborn, are several interesting references to the *Dial* at a time when Thoreau was helping Mr. Emerson in the editing.

N2476: In spite of their difference in temperament and method, Emerson and Parker had great esteem and honor one for another. Mr. Emerson said, "Parker is a soldier whom God gave strength and will to fight for him the battle of the day." In the volume *Miscellanies* will be found his address at the memorial meeting in the Music Hall after Mr. Parker's death. Mr. Edwin D. Mead has written an interesting chapter on Emerson and Parker.¹¹² Lowell, in his *Fable for Critics*, gives a spirited and amusing description in verse of Parker's forceful and omniscient preaching.

N2477: Journal, 1847. "Here was ——, with somewhat ridiculous, yet much nobility, always combined in his person and conversation truth, honesty, love, independence,—yet

¹¹² *The Influence of Emerson*, published by the American Unitarian Association, Boston, 1903.

this listening to men and this credulity in days and conventions and Brisbane projects. His look has somewhat too priestly and ecclesiastic in its cut. He looks like a Universalist minister. But though his intellect is something low and liminary, prosaic and a good roadster, yet he has great depth of character, and grows on your eye. Pathetic it was to hear of his little circle of six young men who met one evening long ago in a little chamber in Boston, and talked over his project of *No Money* until all saw that it was true, and had new faith in the omnipotence of love. In Alabama and Georgia he seems to have stopped in every printing-house, and the only signs of hope and comfort he found were newspapers like Brisbane's 'Future,' which he found in these dusky universities. When shall we see a man whose image blends with nature, so that when he is gone, he shall not seem a little ridiculous, that same small man!"

N2478: Robert Owen, a Welshman, as his name indicates, and with the sanguine zeal of the race, persevered in benevolent socialistic schemes, which came to nothing, all through his life. Among others was that of New Harmony, Indiana, where with his own means he bought 20,000 acres of land and dwellings for 1000 people. He was a constant writer on his favorite theories, his principal work being *The Book of the New Moral World*.

N2479: The five following pages are from a paper entitled "Fourierism and the Socialists," written by Mr. Emerson in the *Dial* for July, 1842, as an introduction to an article by Mr. Albert Brisbane, called "Means of effecting a Final Reconciliation between Religion and Science." The opening paragraph of Mr. Emerson's introduction, omitted from this essay, was as follows:—

"The increasing zeal and numbers of the disciples of Fourier, in America and in Europe, entitle them to an attention which their theory and practical projects will justify and reward. In London, a good weekly newspaper (lately changed into a monthly journal) called the *Phalanx*, devoted to the social doctrines of Charles Fourier, and bearing for its motto, 'Association and Colonization,' is edited by Hugh Doherty. Mr. Etzler's inventions, as described in the *Phalanx*, promise to cultivate twenty thousand acres with the aid of four men only and cheap machinery. Thus the laborers are threatened with starvation, if they do not organize themselves into corporations, so that machinery may labor *for*, instead of working *against* them. It appears that Mr. Young, an Englishman of large property, has purchased the Bénédictine Abbey of Cîteaux, in the Mont d'Or, in France, with its ample domains, for the purpose of establishing a colony there. We also learn that some members of the sect have bought an estate at Santa Catharina, fifty miles from Rio Janeiro, in a good situation for an agricultural experiment, and one hundred laborers have sailed from Havre to that port, and nineteen hundred more are to follow. On the anniversary of the birthday of Fourier, which occurred in April, public festivals were kept by the Socialists in London, in Paris and in New York. In the city of New York, the disciples of Fourier have bought a column in the *Daily Tribune*, Horace Greeley's excellent newspaper, whose daily and weekly circulation exceeds twenty thousand copies, and through that organ are now diffusing their opinions."

N2480: Fourier and his doctrines and followers are alluded to by Mr. Emerson in "The Young American," *Nature, Addresses and Lectures*, pp. 382ff., and in *Representative Men*, in the last paragraph of "Napoleon."

N2481: The sturdy, simple monk, Samson, is the hero of Carlyle's *Past and Present*.

N2482: Mr. Emerson wrote at the beginning of the Brook Farm experiment in 1840:—

"What a brave thing Mr. Ripley has done! He stands now at the head of the Church Militant, and his step cannot be without an important sequel. For the 'community,' I have given it some earnest attention and much talk, and have not quite decided not to go. But I hate that the least weight should hang on my decision,—of me who am so unpromising a candidate for any society. At the name of a society all my repulsions play, all my quills rise and sharpen. I shall very shortly go or send to George Ripley my thoughts on the subject."

But it was foreordained that Mr. Emerson should not become a worker in a hive, and his true instinct saved him from obeying the urgency of his friends, yet he refused, as he said, "very slowly and almost with penitence."

N2483: The letters of George W. Curtis to his friend, Mr. John S. Dwight, give an interesting picture of his manly and yet partly idyllic youth.¹¹³

Several members of the community have written of it, and it is pleasant to find the happy memories it left with them, in spite of its failure. It is also interesting that no one connected with that community wished any one but him or herself to make fun of it. Among the articles on Brook Farm are the following: "Reminiscences of Brook Farm," by George P. Bradford, *Century Magazine*, vol. xxiii., p. 141; "A Girl of Sixteen at Brook Farm," by Mrs. Sedgwick, *Atlantic Monthly*, vol. lxxxv., p. 394; and "A Visit to

¹¹³ *Early Letters of George William Curtis to John S. Dwight*. Edited by George Willis Cooke. Harper & Bros., 1898.

Brook Farm," by Mrs. Kirby, *Overland Monthly*, vol. v., p. 9. Lindsay Swift's *Brook Farm* is a good sketch of the community.

N2484: The person here alluded to is Mr. Charles K. Newcomb, a youth of great virtue and charm, towards whom Mr. Emerson felt an unusual attraction all through his life. Mr. Newcomb's Hamlet-like temperament hindered him from obvious achievement in life, though he did service to his country as a private soldier during the Civil War. When he visited Concord he brought what he had lately written, and usually it gave Mr. Emerson pleasure, but his only published work that I know of is the paper in the *Dial* called "The Two Dolons."

N2485: The "accomplished Doctor of Music" was Mr. John S. Dwight, the well-known musical critic. He is the person alluded to a little later, who would hoe corn on Sunday only.

N2486: Mr. Emerson's attitude towards the reformers of the day was respectful. He honored their earnest seeking, and showed hospitality to their thoughts; but was not their dupe. His mind did not trouble itself with details, and he lived on a larger pattern, but honored them, as far as they went. He wrote in the journal: "In reference to the philanthropies of the day, it seems better to use than to flout them. Shall it be said of the hero that he opposed all the contemporary good because it was not grand? I think it better to get their humble good and to catch the golden boon of purity and temperance and mercy from these poor [preachers and reformers]."

He wrote in his journal that one of his friends, a refined lady, asked him, Whether Reformers were not always in bad taste? "Oh no," he answered; "the poet, the saint, are not only elegant,

but elegance. It is only the half-poet, the half-saint who disgust. Thus now the saint in us proposes, but the sinner in us executes so lamely. But who can be misled who trusts to a thought? That profound deep where-unto it leads is the Heaven of Heavens. On that pillow, softer than darkness, he that falls can never be bruised."

"The soul of a better quality thrusts back the unseasonable economy into the vaults of life, and says, I will obey the God, and the sacrifice and the fire he will provide....The brave soul rates itself too high to value itself by the splendor of its table and draperies. It gives what it hath, and all it hath, but its own majesty can lend a better grace to bannocks and fair water than belong to city feasts.

"The temperance of the hero proceeds from the same wish to do no dishonor to the worthiness he has. But he loves it for its elegancy, not for its austerity. It seems not worth his while to be solemn and denounce with bitterness flesh-eating or wine-drinking, the use of tobacco, or opium, or tea, or silk, or gold. A great man scarcely knows how he dines, how he dresses; but without railing or precision his living is natural and poetic. John Eliot, the Indian Apostle, drank water, and said of wine,—'It is a noble, generous liquor and we should be humbly thankful for it, but, as I remember, water was made before it.'"—"Heroism," *Essays, First Series*.

THE CHARDON STREET CONVENTION

THE STORY of these remarkable meetings, under the name of the "Chardon Street and Bible Conventions," was written by Mr. Emerson for the *Dial* for July, 1842. The Chardon Street Convention, before breaking up, had appointed a "Committee to summon a new Convention to be styled 'the Bible Convention,' for the discussion of the credibility and authority of the Scriptures of the Old and New Testaments." By invitation of this Committee, the new Association met at the Masonic Temple in Boston, March 29, 1842. Of this thinly attended convention Mr. Emerson wrote: "Possibly from the greater unpopularity of its object, out of doors, some faintness or coldness surprised the members. At all events, it was hurried to a conclusion on the first day, to the great disappointment of many. Mr. Brownson, Mr. Alcott, Mr. West, and, among others, a Mormon preacher took part in the conversation. But according to the general testimony of those present, as far as we can collect it, the best speech made on that occasion was that of Mr. Nathaniel H. Whiting, of South Marshfield." Mr. Emerson says of him: "A plain, unlettered man, leaving for the day a mechanical employment to address his fellows, he possesses eminent gifts

for success in an assembly so constituted." He obtained from Mr. Whiting the substance of his address, occupying eight pages of the magazine, to which his own *Dial* paper, here given, was the introduction.

N2487: In the "Lecture on the Times," given the year after this convention, the following is the concluding passage:—

"Reality is all we prize, and...we are bound on our entrance into nature to speak for that. Let it not be recorded in our own memories that in this moment of the Eternity, when we who were named by our names flitted across the light, we were afraid of any fact, or disgraced the fair Day by a pusillanimous preference of our bread to our freedom. What is the scholar, what is the man for, but for hospitality to every new thought of his time? Have you leisure, power, property, friends? You shall be the asylum and patron of every new thought, every unproven opinion, every untried project which proceeds out of good will and honest seeking. All the newspapers, all the tongues of to-day will of course at first defame what is noble; but you who hold not of to-day, not of the times, but of the Everlasting, are to stand for it: and the highest compliment man ever receives from heaven is the sending to him its disguised and discredited angels."—*Nature, Addresses and Lectures*.

N2488: This very convention was probably in Mr. Emerson's mind when he wrote in the first chapter of *Representative Men* these words:—

"I go to a convention of philanthropists. Do what I can, I cannot keep my eyes off the clock. But if there should appear in the company some gentle soul who knows little of persons or parties, of Carolina or Cuba, but who announces a law that disposes these particulars, and so certifies me of the

equity which checkmates every false player, bankrupts every self-seeker, and apprises me of my independence on any conditions of country, or time, or human body,—that man liberates me; I forget the clock. I pass out of the sore relation to persons. I am healed of my hurts. I am made immortal by apprehending my possession of incorruptible goods."

N2489: Journal, 1841. "We concede, O Miss P. [Peabody?], there is a difference between the spirit in which these poor men struggling to emancipate themselves from the yoke of a traditional worship, and crying out in their sorrow and hope, speak at the Chardon Street Convention, and the spirit in which he who is long already free from these fears turns back and knowingly shoots sarcasms at the old and venerated names."

EZRA RIPLEY, D. D.

THIS SKETCH was written for the Social Circle, a club in Concord dating from the close of the Revolution. During that struggle the notables of the town, formed into a Committee of Safety, had come together from their farms, shops or offices to raise men for the army and provide for them in the field. After the war was over they missed these friendly gatherings for the common good, and so in 1782 organized the Circle, "to strengthen the social affections, and disseminate useful communications among its members." The minister of the town was not, however, chosen a member until 1785. Mr. Emerson was a member from 1839 for the rest of his life. After the death of Dr. Ripley, who was his step-grandfather, he was asked to prepare the customary Memoir for the Club-Book. It was enlarged from a notice printed by him in the *Middlesex Yeoman* at the time of Dr. Ripley's death.

Mr. Emerson himself enjoyed the club, which met at the house of each of the twenty-five members in turn from October to April. The hours were from seven to nine in the evening, for, when he joined, a large part of the members were farmers. The Circle held strictly to its formation, the company, sitting upright in their chairs

around the small parlor of the entertainer, strove to keep the conversation general. Just before they went home they partook of simple refreshment,—apples, nuts and raisins, sometimes cake, and cider or chocolate for drink. Mr. Emerson wrote to a city friend in 1844:—

"Much the best society I have ever known is a club in Concord called the Social Circle, consisting always of twenty-five of our citizens, doctor, lawyer, farmer, trader, miller, mechanic, etc., solidest of men, who yield the solidest of gossip. Harvard University is a wafer compared to the solid land which my friends represent. I do not like to be absent from home on Tuesday evenings in winter."

The celebration of the birthday of Emerson held in Concord, May 25, 1903, was under the auspices of the Social Circle.

N2490: The following information regarding this subject is gathered from Shattuck's *History of Concord*:—

"The buildings of Harvard College were occupied as barracks for the American army, while stationed at Cambridge, and the students were dispersed. The college was removed to Concord and commenced its operations on the first of October, 1775. President Langdon lived at Dr. Minot's [on the Common, where until a few years since the Middlesex Hotel stood]; Professor Sewall lived at James Jones's; Professor Wigglesworth at the Bates place on the Bedford Road; and Professor Winthrop at Darius Merriam's, near which was the library and philosophical apparatus....The students boarded...in many different places. The recitations were at the court-house and meeting-house. Prayers were attended at the latter place.

"The following proceedings of the government of the college were communicated to the town when it was about to be removed to Cambridge:—

"CONCORD, June 12, 1776.

"At a meeting of the President, Professors, and Tutors of Harvard College, voted, that the following address of thanks be presented by the president to the selectmen, the gentlemen of the committee, and other gentlemen and inhabitants of the town of Concord, who have favored the college with their encouragement and assistance, in its removal to this town, by providing accommodations.

"Gentlemen,—The assistance you have afforded us in obtaining accommodations for this society here, when Cambridge was filled with the glorious army of freemen, which was assembled to hazard their lives in their country's cause, and our removal from thence became necessary, demands our grateful acknowledgments.

"We have observed with pleasure the many tokens of your friendship to the college; and particularly thank you for the use of your public buildings. We hope the scholars while here have not dishonored themselves and the society by any incivilities or indecencies of behaviour, or that you will readily forgive any errors which may be attributed to the inadvertencies of youth.

"May God reward you with all his blessings, grant us a quiet re-settlement in our ancient seat to which we are now returning, preserve America from slavery, and establish and continue religion, learning, liberty, peace, and the happiest government in these American Colonies to the end of the world.

"SAMUEL LANGDON, President.

"Per order."

N2491: Phebe was the eldest daughter of Rev. Daniel Bliss, the zealous pastor of the Concord Church from 1738 until his death in 1764. Then the young William Emerson was summoned from his teacher's desk at Reading to supply the pulpit for a few weeks. His preaching pleased the people, and in the end of 1765 he was chosen pastor by the church, and their action confirmed by the town at the "March meeting." He boarded with the widow of his predecessor, and fell in love with Phebe, whom he married, and in 1769 built the Manse by the Old North Bridge, "a nest for his phebe-bird." He was an eager Son of Liberty, and fanned the flame of patriotism of his parishioners at the outbreak of the Revolution. In August, 1776, having obtained from the church leave of absence for the purpose, he joined the Northern army at Ticonderoga as chaplain, but in October sickened and died of fever. Four years after his death his widow married the young successor, the subject of this Memoir.

Dr. Ripley was always kind and hospitable to the Emerson children and grandchildren of his wife. He especially befriended the widow of William the younger, with her five boys, who thus learned to regard Concord as a home. This determined Waldo's settling there, and on his return from Europe in 1834, while looking for a house in Concord, he stayed with Dr. Ripley, and much of "Nature" was written at the Manse.

N2492: Rev. Joseph Emerson, the minister of Malden for years. He married Mary, the daughter of Rev. Samuel Moody of York, Maine, a good but eccentric man, and a rugged and powerful preacher. Joseph Emerson was a devoted scholar. Mr. Emerson recorded with pleasure this anecdote of him,—that he said after he had read the *Iliad* that he should be sorry to think that the men and cities he read of never existed.

Three of his sons were ministers, Joseph of Pepperell, William of Concord and John of Conway, Massachusetts.

N2493: In previous editions this has been printed "repent this Providence," but I am quite sure that this was an error arising from Mr. Emerson's habitual use of the old-fashioned long s. "Resent" was then used in a good as well as a bad sense to signify the reaction of the mind on any event. Rev. William Emerson, the son of Joseph, in writing to his wife of the narrow escape from death of her two brothers who were in the crowd at the Boston Massacre, so-called, said: "However afflicting such a Scene as y^e Murder of y^e 4 above mentioned, yet to you and I it is more sensibly felt, & ought to be gratefully resented, the very wonderful Preservation of our dear Brothers, Theo^r and Sam!"

N2494: In his journal for 1834 Mr. Emerson notes: "Dr. Ripley prays for rain with great explicitness on Sunday, and on Monday the showers fell. When I spoke of the speed with which his prayers were answered, the good man looked modest." When Dr. Ripley was old and feeble and also deaf, Rev. Hersey B. Goodwin was associated with him as pastor, and their relations were pleasant. One Sunday Mr. Goodwin exchanged with Rev. Octavius B. Frothingham, then a young minister and unacquainted with the old-time formalities connected with the church and the aged pastor. Arriving early, the clergyman from Boston took his place in the pulpit and soon heard the Doctor's voice at the entrance inquiring for him, and tones of disapproval when it appeared that he had not waited for the senior pastor. On ascending the pulpit, Dr. Ripley read and handed over to Mr. Frothingham the customary notes sent up by families or individuals, in affliction or in joy, desiring by name the prayers of the congregation. When the

prayer was over, Dr. Ripley, who had leaned forward to hear with his hand to his ear, was heard by the congregation to say, "But you have n't prayed for our afflicted members." Mr. Frothingham had to explain, in voice loud enough to make the Doctor hear, that it was his custom not to read notes aloud nor to pray for individuals, but to frame a general petition including all, to which the Doctor severely answered in a voice audible to the congregation, "Well, *it is a very bad custom*, and the sooner you change it the better!"

N2495: The Manse stood close by the Old North Bridge, and Mr. Emerson, while a guest there in 1864, writes: "Francis comes to Dr. Ripley at breakfast to know whether he shall drive the cow into the battle-field."

N2496: He was a member of the old Fire Association of Concord, founded in 1794. Mr. Emerson was also a member, and over the stairway in his house always hung the two leathern fire-buckets and green baize bag for saving property.

N2497: This was the remark of Mr. Emerson's brother Edward.

N2498: Journal, 1835, "I listened yesterday as always to Dr. Ripley's prayer in the mourning house with tenfold the hope and tenfold chance of some touch of nature that should melt us, that I should have felt in the rising of one of the Boston preachers of proprieties—the fair house of Seem. These old semi-savages do from the solitude in which they live and their remoteness from artificial society and their inevitable daily comparing man with beast, village with wilderness, their inevitable acquaintance with the outward nature of man, and with his strict dependence on sun and rain and wind and frost, wood, worm, cow and bird, get an

education to the Homeric simplicity, which all the libraries of the Reviews and the Commentators in Boston do not countervail."

Journal, 1840. "Dr. Ripley is no dandy, but speaks with the greatest simplicity and gravity. He preaches, however, to a congregation of Dr. Ripleys; Daniel Webster to an assembly of Websters. Could this belief of theirs be verified in the audience, each would be esteemed the best of all speakers."

N2499: Journal, 1841. "Sept. 21. Dr. Ripley died this morning. The fall of this oak of ninety years makes some sensation in the forest, old and doomed as it was....His body is a handsome and noble spectacle. My mother was moved just now to call it 'the beauty of the dead!...'I carried Waldo to see him and he testified neither repulsion nor surprise, but only the quietest curiosity. He was ninety years old, yet this face has the tension and resolution of vigorous manhood....A man is but a little thing in the midst of these great objects of Nature, yet a man by his moral quality may abolish all thoughts of magnitude, and in his manners equal the majesty of the world."

MARY MOODY EMERSON

MARY MOODY Emerson, the daughter of Rev. William Emerson of Concord and Phebe Bliss, his wife, was born in 1775, and lived until 1863. She was the younger sister of Mr. Emerson's father. When Madam Emerson was left a widow in straitened circumstances with five little boys, their aunt used often to visit them, awakened their interest in literature and in character, and by constant correspondence with her favorites, Waldo and Charles, spurred their ambition, led them on to discussion of authors and principles, criticised their thought and expression, and elevated their standards. Although the words seem grotesque when applied to this ascetic enthusiast and devotee, she had many of the characteristics and faults now commonly associated with the "artistic temperament." She was a born painter in words, was odd in speech and dress, impulsive and abrupt, and so whimsical and exacting as to have to constantly seek, up and down New England, for a new boarding-place. Once when she wrote a prayer for "peace in our borders," some one pointed out that she had written *boarders*, but Miss Emerson said, "Let it stand."

With all her oddities, she was always welcome to her nephew. Writing to her in 1839 he urged her to come again to Concord, "this old, dear, odious haunt of the race," the "odious" referring to her unpleasant remembrance of having her youthful waywardness checked by her good stepfather, Dr. Ripley, on her early visits at the Manse. To her remarkable degree of literary culture, though almost unschooled and brought up by relatives who had hardly more than the reading of the Bible gave, her nephew owed much; but more to her native gifts, the fire of her piety, her zeal for learning, her brilliant expression and the unsparing criticism, which yet could but thinly mask her affection.

Her humor tempered her oddities to those who had the wit to detect it. The few persons who did not always give way to her whims, but dared meet steel with steel, and not allow themselves to be browbeaten, fared best with her. Soon after the Rev. Grindall Reynolds began his long and useful ministry in the church of her ancestors, Miss Emerson, then eighty years old, waited on the porch until he came out, genially talking with his parishioners, and in their presence rebuked him for laughing in the sacred precincts. "Miss Emerson," said the minister pleasantly, "my father, years ago, tried to break me of the habit, but failed, and I'm afraid you will: but, Madam, I perceive that you are smiling." "Ah, but it is a sardonic smile," she answered.

A few years later Mr. Emerson gathered a company of friends and neighbors at his house to hear Mr. Alcott converse. Anxious that some of his friends from the city should find the pleasure and profit that he himself did in Mr. Alcott's thought, he invited, among others, Mr. Henry James, senior. Mr. James, supposing that in a "Conversation" more than one could take part, and being a born dialectician, presently took issue with Mr. Alcott and harassed him with questions, to his great discomfiture, and, with characteristic

originality in use of terms, began a witty diatribe upon Morals, meaning thereby self-conscious moral action. Mr. Alcott, who had much less skill in fence even than Mr. Emerson, was driven from the field. Then from her chair arose Miss Emerson, eighty-four years old, to her full height of some four and a half feet, crossed the parlor to where Mr. James, looking like a kindly Socrates, sat, took him by the shoulders and roundly rebuked his levity, shaking him the while. Mr. James was delighted, and treated her with most chivalrous respect, and, slighting Mr. Alcott, gave her the honors of the tournament. An account of this conversation is given in the *Familiar Letters* of Thoreau. Miss Emerson liked Thoreau and they always had pleasant relations.

In 1855 he wrote:—

"Miss Mary Emerson is here,—the youngest person in Concord, though about eighty,—and the most apprehensive of a genuine thought; earnest to know of your inner life; most stimulating society; and exceedingly witty withal.

"She says they called her old when she was young, and she has never grown any older. I wish you could see her."

Mr. Emerson so valued his aunt's writings, especially her journals, which, like his own, were occupied with thoughts,—events being only alluded to,—that he frequently read in them, and copied into four books of the size of his journals long passages from them and from her letters. At the beginning of the first of these he wrote:—

"E. T. E.'s notice of M. M. E. in her Journal.

'Morning dawns; and Hartford, though
Pleasantly its pictures glow,

We must leave; and one who seems
Like a vision in our dreams.
She will dwell upon our mind,
Flesh and blood so well refined
That one questions whether death,
Wasted form, or loss of breath
Will be in her path to heaven,—
All her body seems to glow
With her spirit's action so."

This account of his aunt's life was read by Mr. Emerson before the Woman's Club in Boston, in 1869, under the title "Amita." "The Nun's Aspiration," in the *Poems*, which was a rendering into verse of a passage in his aunt's diary, at first bore the same name. Part of this poem serves as the motto to this sketch.

N2500: Mr. Emerson wrote, about the year 1837: "I doubt if the interior and spiritual history of New England could be truelier told than through the exhibition of family history such as this, the picture of this group of M. M. E. and the boys, mainly Charles. The genius of that woman, the key to her life is in the conflict of the new and the old ideas in New England. The heir of whatever was rich and profound and efficient in thought and emotion in the old religion which planted and peopled this land, she strangely united to this passionate piety the fatal gift of penetration, a love of philosophy, an impatience of words, and was thus a religious skeptic. She held on with both hands to the faith of the past generation as to the Palladium of all that was good and hopeful in the physical and metaphysical worlds, and in all companies and on all occasions and especially with these darling nephews of her hope and pride, extolled and poetised this beloved Calvinism. Yet

all the time she doubted and denied it, and could not tell whether to be more glad or sorry to find that these boys were irremediably born to the adoption and furtherance of the new ideas. She reminds me of Margaret Graeme, the enthusiast in Scott's *Abbot*, who lives to infuse into the young Roland her enthusiasm for the Roman church, only that *our* Margaret doubted while she loved. Milton and Young were the poets endeared to the generation she represented. Of Milton they were proud, but I fancy their religion has never found so faithful a picture as in the *Night Thoughts*. These combined traits in M. M. E.'s character gave the new direction to her hope, that these boys should be richly and holily qualified and bred to purify the old faith of what narrowness and error adhered to it, and import all its fire into the new age—such a gift should her Prometheus bring to men. She hated the poor, low, thin, unprofitable, unpoetical Humanitarians as the devastators of the Church and robbers of the Soul, and never wearies with piling on them new terms of slight and weariness. 'Ah!' she said, 'what a poet would Byron have been, if he had been born and bred a Calvinist!'"

N2501: Reading over her letters to him and his brothers, Mr. Emerson wrote in 1884:—

"Aunt Mary, whose letters I read all yesterday afternoon, is a genius always new, subtle, frolicsome, musical, unpredictable. All your learning of all literatures and states of society, Platonistic, Calvinistic, English or Chinese, would never enable you to anticipate one thought or expression. She is embarrassed by no Moses or Paul, no Angelo or Shakspeare after whose type she is to fashion her speech; her wit is the wild horse of the desert, who snuffs the sirocco and scours the palm-grove without having learned his paces in the Stadium or at Tattersall's. What liberal joyful architecture,

liberal and manifold as the vegetation from the earth's bosom, or the creations of frostwork on the window! Nothing can excel the freedom and felicity of her letters—such nobility is in this self-rule, this absence of all reference to style or standard; it is the march of the mountain winds, the waving of flowers, or the flight of birds. But a man can hardly be a reader of books without acquiring their average tone, as one who walks with a military procession involuntarily falls into step."

Yet, in spite of her oddities and of her piety of old New England, because of her quality and the directness and grandeur of her thought and expression her nephew wrote:—

"I believe that this Greek genius is ever reappearing, and that each of us knows one or more of the class. Aunt Mary is a Greek, and I have more in memory. Every child is a Greek."

N2502: Her joy that her beloved nephews should drink freely at the fountains of knowledge, for which every day of her life she had so eagerly thirsted, is touching. It is shown in this letter written to William Emerson just before he sailed for Germany to pursue his studies at Göttingen in 1823:—

"I have thought of you often in the past week, in which I have gone through the 1st volume of Michaelis's *Introduction to the New Testament*. I beg when you come to antient MSS, to Latin versions and above all to the history of the Syrian antient version, you will write to me. What fields of knowledge as well as of labour lie before you! This author, so learned, so famous, says no clergyman ought to be ignorant of the Hebrew, Syriac and rabbinical language. Then *remember me*. And I do believe, take all our intercourse from the first promise of your childhood to the present, that

you are in debt to me for affection. After you have spent long years in sacrificing ease and fine things, then repay me by one single learned letter."

N2503: Dr. Holmes in reference to this and some other passages quoted by Mr. Emerson in this sketch says: "There are many sentences cited by Mr. Emerson from the journal of his Aunt Mary which remind us very strongly of his own writings. Such a passage as the following might have come from his essay 'Nature,' but it was written when her nephew was only four years old."

N2504: The memory of the devout attitude of the guides of his youth towards Nature remained with Mr. Emerson in his days of emancipation:—

"Life is ecstatical, and we radiate joy and honor and gloom in the days and landscapes we converse with. But I must remember a real or imagined period in my youth when they who spoke to me of Nature were religious, and made it so, and made it deep: now it is to the young sentimentalists frippery, and a milliner's shop has as much reason and worth."

In his journal of 1837, he wrote blessing his star, "which rained on me influences of ancestral religion. The depth of the religious sentiment which I knew in my Aunt Mary, imbuing all her genius, and derived to her from such hoarded family traditions, from so many godly lives and godly deaths of sainted kindred, at Concord, at Malden and York, was itself a culture, an education. I heard with awe her tales, etc.

.

"In my childhood Aunt Mary herself wrote the prayers which first my brother William and, when he went to college, I read aloud morning and evening at the family devotions, and they still sound in my ear with their

prophetic and apocalyptic ejaculations. Religion was her occupation, and when, years after, I came to write sermons for my own church, I could not find any examples or treasures of piety so high-toned, so profound or promising such rich influence, as my remembrance of her conversation and letters."

N2505: Commenting upon this passage, Dr. Holmes said, "Miss Mary Emerson showed something of the same feeling towards natural science which may be noted in her nephews Waldo and Charles."

N2506: Mr. Cabot in his Memoir gives extracts from letters passing between Miss Emerson and her nephew when he was studying divinity in Cambridge. The disbelief that he rashly ventures to express in the orthodox scheme of salvation draws upon his head and upon the college a torrent of scornful eloquence from the zealous aunt, who, Mr. Emerson said, "wished every one to be a Calvinist but herself." The nephew seems to have seen no need for the Mediation, for the aunt bursts forth,—

"He talks of the Holy Ghost: God of mercy, what a subject! Holy Ghost given to every man in Eden; it was lost in the great contest going on in the vast universe,—it was lost, stifled; it was re-given embodied in the assumed humanity of the Son of God. And since,—the reward of prayer, agony, self-immolation! Dost not like the faith and the means? Take thy own or rather the dictates of fashion....Would to God thou wert more ambitious,—respected thyself more and the world less. Thou wouldst not to Cambridge. True, they use the name *Christo*, but that venerable institution, it is thought, has become but a feeble, ornamental arch in the great temple which the Christian world maintains to the honor of his name....

"The nature and limits of human virtue, its dangers, its origin, 'questions answered at Cambridge, easily;'—God, forgive thy child his levity,—subjects veiled in something of Thine own awful incomprehensibility, soothed only by the faith which reason leaves, but can never describe."...

N2507: The abiding influence which this spurring, guiding, rebuking and loving enthusiast in her lonely life had on her nephew, whose taste, whose motives, character and style she helped to form, may be judged by these extracts from his journal:—

1866. "Read M. M. E.'s MSS. yesterday many pages. They keep for me the old attraction, though when I sometimes have tried passages on a stranger, I find something of fairy gold:—they need too much commentary, and are not as incisive as on me. They make the best example I have known of the power of the religion of the Puritans in full energy, until fifty years ago, in New England. The central theme of these endless diaries is, her relation to the Divine Being; the absolute submission of her will, with the sole proviso that she may know it is the direct agency of God (and not of cold laws of contingency, etc.) which bereaves and humiliates her. But the religion of the diary, as of the class it represented, is biographical; it is the culture, the poetry, the mythology, in which they personally believed themselves dignified, inspired, judged and dealt with, in the present and in the future; and certainly gives to life an earnestness and to nature a sentiment, which lacking, our later generation appears frivolous."

And again:—

"Yesterday I read an old file of Aunt Mary's letters, and felt how she still gains by all comparison with later friends. Never any gave higher counsels, as E. H. Most truly said, nor played with all the household incidents with

more wit and humor. My life and its early events never look trivial in her letters, but full of eyes, and acquire deepest expression."

SAMUEL HOAR

N2508: This paper reflects the gloom which settled on the friends of Freedom in the North on the fourth of November, 1856, when James Buchanan was chosen President of the United States. On that day this sketch was written. It was first printed in *Putnam's Magazine*.

N2509: The State of South Carolina having, between the years 1820 and 1835, passed several Acts with purpose "to restrain the emancipation of slaves and to prevent free persons of color from entering" the State, resulting in the imprisonment of many citizens of Massachusetts (seamen on coasting vessels) during the stay of the vessels at Charleston, and the whipping or selling them as slaves should they return, various resolves of protest against this outrage were passed by the General Court of Massachusetts. To these the offending State turned a deaf ear. The Acts of South Carolina being obviously unconstitutional, it was desired to bring some cases before the Supreme Court, but it proved impossible to do so without collecting evidence in Charleston. After all other

means had failed, the General Court passed in 1844 the following resolve concerning the imprisonment of citizens in other States:—

"Resolved, That His Excellency the Governor, with the advice and consent of the Council, be hereby authorized to employ an agent for the port of Charleston, South Carolina, and an agent for the port of New Orleans, whose duty it shall be to reside in said port, for a term not exceeding one year, for the purposes specified in the resolves relating to this subject, passed on the twenty-fourth of March, in the year one thousand eight hundred and forty-three. And that His Excellency the Governor be hereby authorized to draw his warrant to cover any necessary expenses incurred in carrying into effect this or the aforementioned resolves, after the same shall have been audited and allowed by the Council, to be paid out of the public treasury."

I copy from the Report of the Joint Special Committee of the Senate of Massachusetts their statement as to the treatment of the Agent of Massachusetts by the people of Charleston, and the subsequent Acts of the Legislature of South Carolina. This report was made February 3, 1845 (Senate Document, No. 31), and is signed by Charles Francis Adams:—

"Under the authority conferred by this resolve the Governor of the Commonwealth appointed Samuel Hoar, a respected citizen of Massachusetts, the agent for the port of Charleston, to perform the duty specifically assigned him and no more. That gentleman repaired to Charleston, endeavored to commence upon his task, and, simply because he attempted so to do, was driven by threats of personal violence of a mob from the territory of South Carolina. And the Legislature of that State subsequently sanctioned the act of the people, by recording on her statute-book an order for the expulsion, as a dangerous emissary of

sedition, of this single, inoffensive, unarmed man. And the same Legislature has passed a law making it a highly penal offence in any person, whether citizen or stranger, ever to attempt the like again."

This Committee made a Protest and a Declaration of the history of maltreatment of our citizens and the measures taken in the case by Massachusetts and South Carolina, which they recommended should be sent to the President and to the Governors of all the States.

N2510: Mr. Hoar was born in May, 1778, in Lincoln, the portion that belonged to Concord until the incorporation of Lincoln in 1754. He graduated at Harvard College in 1802, was admitted to the bar and moved to Concord in 1805. He was a member of the Convention for revising the Constitution of Massachusetts in 1821, and was in the State Senate in 1825.

Two of his sons attained eminence in public life, Ebenezer Rockwood at the bar and on the bench, and as Attorney-General of the United States during Grant's administration, and George Frisbie as Representative and Senator through many Congresses.

N2511: Journal. "The beauty of character takes long time to discover. Who that should come into Concord but would laugh if you told him that Samuel Hoar was beautiful, yet I thought one day when he passed, the rainbow, geometry itself is not handsomer than that walking sincerity, straitly bounded as it is."

Journal, 1838. "I know a man who tries time. The expression of his face is that of a patient judge who has nowise made up his opinion, who fears nothing, and even hopes nothing, but puts nature on its merits. He will hear the case out and then decide."

N2512: Sir Henry Wotton's "The Happy Life."

N2513: A client met his counsel at the court-room door in Concord, and said, "How is our case getting on?" "We are nowhere!" snapped the disgusted lawyer; "there's only one man of any sense on the jury, and he thinks that Sam Hoar was the making of him."

Journal, 1849. "It is not any new light he sheds on the case, but his election of a side and the giving his statuesque dignity to that side, that weighs with juries or with conventions. For he does this naturally."

Journal, 1864. "I should say of Samuel Hoar what Clarendon writes of Sir Thomas Coventry, that 'he had a strange power of making himself believed, the only justifiable design of eloquence.'"

N2514: The following passage from the journal of 1844 occurs with slight changes, and the omission of the name, in the chapter on Montaigne, in *Representative Men*:

"Men are edificant or otherwise. Samuel Hoar is to all men's eyes conservative and constructive: his presence supposes a well-ordered society, agriculture, trade, large institutions and empire; if these things did not exist, they would begin to exist through his steady will and endeavors. Therefore he cheers and comforts men, who feel all this in him very readily. The reformer, the rebel, who comes by, says all manner of unanswerable things against the existing republic, but discovers to my groping Dæmon no plan of house or empire of his own. Therefore, though Samuel Hoar's town and State are a very cheap and modest commonwealth, men very rightly go for him and flout the reformer."

N2515: From Cowper's *Task*.

N2516: The father of "Squire Hoar," as he was called in Concord, was also Samuel Hoar, who represented Lincoln in the General Court almost continuously from 1794 to 1808, and was Senator from 1813 to 1817. John Hoar, an ancestor, was the first representative of the law in Concord, during the seventeenth century. He was independent and eccentric, and incurred censure and fine for speaking with disrespect of the minister. During King Philip's War he displayed great courage and humanity on behalf of the Praying Indians.

THOREAU

IN MAY, 1862, Thoreau died, at the age of forty-four, in Concord, where he was born. Consumption had been in his family, and attacked even his rugged frame after an unusual exposure, the sitting long in the snow counting the growth-rings on some stumps. His illness was long and progressive, but his courage and good cheer, and his affection towards his family, showed throughout. He worked on his manuscripts until within a few weeks of his death. In a remarkable letter written about six weeks before it occurred, he said, "I suppose I have not many months to live; but of course I know nothing about it. I may add that I am enjoying existence as much as ever and regret nothing."¹¹⁴ His funeral services were held in the meeting-house of the First Church. His neighbor the Rev. Mr. Reynolds made the prayer, a poem by his friend William Ellery Channing was sung, and Mr. Emerson made the address. In the following August his remarks, with some additions, were printed in the present form in the *Atlantic Monthly*.

¹¹⁴ *Familiar Letters of Henry David Thoreau*, edited by F. B. Sanborn. Boston: Houghton, Mifflin & Co., 1895.

In 1837 Mrs. Emerson's elder sister, Mrs. Lucy C. Brown, who boarded in the Thoreau family, and to whom many of Thoreau's published letters were written, called Mr. Emerson's attention to the independence of the thoughts, and the similarity to his own, of some writings of the young Henry, who had just graduated from Harvard College. Mr. Emerson was interested, and asked her to bring her young friend to see him. Thus began a friendship which, in spite of the difference of fourteen years in their ages, and of temperamental impediments to its fullest enjoyment, was deep and lasting. In the spring of 1841 Thoreau, by Mr. Emerson's invitation, came to live in his family like a younger brother, giving help in the care of the garden and poultry, and applying his Yankee "faculty" to any household exigency, yet having much of his time for his own pursuits. He bore the severe test of close association well, and won increasing respect and regard from his host and hostess. With such a master of arts in the house, Mr. Emerson was relieved of many questions, cares and tasks that he had no fitness to deal with, though he often worked in the garden with his friend. Thoreau showed a chivalric devotion to Mrs. Emerson, or more properly, regarded her as a priestess, as his fine letters to her show. His treatment of children, who always delighted in him, was perfect,—a delightful playfellow, yet always with reverence for childhood. In the note to the poem "Threnody" is an extract from Mr. Emerson's journal telling of his friend's devotion to little Waldo.

When Thoreau's years of teaching and pencil-making and the Walden episode were over, he came once more into his friend's home, this time to be man-of-the-house during Mr. Emerson's absence in England in 1847–48, and again his conduct of his trust was perfect. To know Thoreau as he was, the reading of his *Familiar Letters*, above alluded to, and the extracts from his journal, must supplement the reading of the books published by him. In

them, as in conversation with men who were his friends, there was a tendency to startle, to controvert and to provoke argument. This was inherited from the Scotch Dunbar blood on his mother's side, and was a distinct misfortune, standing in the way of perfect relations. In his letters the true, pure man and loyal friend appears. Living so long, at the most impressionable age, in close relation with an older friend and scholar, whom he honored, and with whose views, then considered heretical, he sympathized, it was not unnatural that his manner of thought and his style should have been legitimately influenced, and even some superficial trick of manner or speech unconsciously acquired. Hence the charge of imitation has been brought against Thoreau. Doubtless his growth was stimulated by kindred ideas. This is all that can be granted. Utter independence, strong individuality distinguished him. His one foible was, not subserviency, but combativeness, mainly from mere love of fence when he found a worthy adversary, as his best friends knew almost too well.

Although their personal relations could not be close, each held the other in highest honor. In 1852 Mr. Emerson wrote in his journal:—

"I am my own man more than most men, yet the loss of a few persons would be most impoverishing, a few persons who give flesh to what were else mere thoughts, and which now I am not at liberty to slight or in any manner treat as fictions. [He speaks of Alcott, and then goes on.] And Thoreau gives me in flesh and blood and pertinacious Saxon belief my own ethics. He is far more real, and daily practically obeying them than I, and fortifies my memory at all times with an affirmative experience which refuses to be set aside."

This sketch of Thoreau by a friend who had known him for twenty-five years with increasing respect for the genuineness of his knowledge, the truth of his mind and the nobility of his character, is important as a corrective to the essay on Thoreau by Lowell, who knew little of him directly. Yet Lowell, after some nine pages of ridicule, which is what catches the eye and leaves the impression on the casual reader, says in a page or two what, if true, should make all that precedes as dust in the balance.

N2517: Thoreau records that he did not cry when, at the age of three months, he was baptized by the venerable Puritan Dr. Ripley. In college both he and Emerson won disapproval from the authorities, and great and permanent advantage for themselves, by introducing the elective system in their own cases. It escaped Mr. Emerson's notice that Thoreau had a "Part" at his Commencement: with a classmate he had a Conference on "The Commercial Spirit," which, it is unnecessary to say, he attacked. This paper, written at the age of twenty, has the originality and beauty which characterized his later writing. Mr. Sanborn gives extracts from it in the *Familiar Letters*.

With regard to the French, or more properly Breton, element in Thoreau, Mr. Emerson quotes a friend as saying: "Here is the precise *voyageur* of Canada sublimed or carried up to the seventh power. In the family, the brother and one sister preserved the French character of face."

With regard to the private school of John and Henry Thoreau, I collected the testimony, some twenty years since, of such of the scholars as I could find, and all but one (who was not very bright and had been among the younger pupils) had remembered it as a privilege of their lives; they loved John and respected Henry.

N2518: It is a fact not generally known, for Thoreau did not deign to notice the gossip of his neighbors, that when he left his father's occupation of the lead-pencil manufacture because he wished to do business with the Celestial City, his family, largely through his means, had a lucrative business. His reading in college gave him the knowledge of the best ingredient to mix with the plumbago, for which purpose bay-berry wax had hitherto been used here. His own ingenuity probably had a large part in the invention of a simple but perfect way of grinding the lead to an impalpable powder. Thus the greasiness and grit of American lead-pencils were got rid of. The new art of electrotyping demanded the best plumbago, and the Thoreaus had practically the monopoly by the excellence of their lead. After the death of his father, even up to the time of his own illness, Henry gave necessary oversight to the mill in Acton, and helped in the heavier part of packing the product, when necessary.

N2519: The first mention of Thoreau in Mr. Emerson's journal is on February 11, 1838:—

"At the 'teachers' meeting' last night my good ——, after disclaiming any wish to difference Jesus from a human mind, suddenly seemed to alter his tone and said that Jesus made the world and was the Eternal God. Henry Thoreau merely remarked that 'Mr. —— had kicked the pail over.' I delight much in my young friend, who seems to have as free and erect a mind as any I have ever met."

His friend copied with pleasure from Thoreau's journal of 1855 and 1856 the following notes of heroic satisfaction in asceticism:—

"What you call bareness and poverty is to me simplicity."

And again:—

"Ah! how I have thriven on solitude and poverty. I cannot overstate this advantage."

N2520: The statements here made, though true in spirit, need a little qualification. As a boy and youth he was expert as a hunter, and notably so as a fisherman. The gun and rod are almost invariably the first guides of a lover of Nature to wood and stream. He soon passed through this novitiate. His last use of the gun was probably when he confesses to have "effected the transmigration of a wood-chuck" which was destroying his bean-crop at Walden, but the pond fed him occasionally with her fishes, and he caught and procured many specimens of all the Concord fishes for Agassiz's collection. While never man cared less what he ate, and he could have lived simply as an Esquimau without complaint, he was a man of too large pattern to live by any rule of thumb. Much foolish outcry was raised because he was too kindly a son to thrust back the little gifts which his loving mother, when he went to see her, sometimes begged him to take back with him to his cabin. At the table of friends he ate what was set before him, instead of making the self-conscious protests of contemporary reformers. Many persons now gone have testified to the writer, what he also remembers well, the charm and the helpfulness of Thoreau's society. He was the best of sons and brothers, and lived at home all but the two years of his life spent at Walden, the years when he was at college, and the short period when he taught in Staten Island. While always helpful, he kept his mind, his hands and feet free from all bondage.

N2521: "We dine," he said, "at the sign of the scrub-oak."

N2522: This was Mr. Emerson's own remark.

N2523: Some lines of William Morris, from the Proem to the *Earthly Paradise*, exactly describe Thoreau's gift to his townspeople in the old Lyceum, on those dreary winter nights when he read us his "Wild Apples" or "Autumnal Tints":¹¹⁵—

"Folk say, a wizard to a Northern king
At Christmas-tide such wondrous things did show,
That through one window men beheld the Spring,
And through another saw the Summer glow,
And through a third the fruited vines a-row,
While still, unheard, yet in its wonted way,
Piped the drear wind of that December day."

N2524: Thoreau had become disgusted with the Government at the time of the Mexican War. He said that only once a year did he come in contact with it in the person of the tax-collector, and refusal to pay his tax seemed his obvious way of protest against the evil measures of the day. He thus washed his hands of any share, possibly not knowing that his town and county tax went entirely for innocent and useful purposes. Samuel Staples, at once the tax-gatherer, constable and jailer, a downright friendly man, offered to pay the small tax for him, but Thoreau would not allow this, so Staples said, "Henry, if you don't pay, I shall have to lock you up pretty soon." "As well now as any time, Sam," was the answer. "Well, come along then," said Staples, and put him in jail. The tax was left at the jailer's house next day when he was away from home. He told me that he never knew who paid it, but, if I recollect rightly,

¹¹⁵ These lectures are printed in Thoreau's *Excursions*.

said that he supposed that it was Miss Elizabeth Hoar, or her father, through his hands. Of course then he released his prisoner, and, as he said earlier concerning Mr. Alcott's refusal to pay taxes, "I vum, I believe it was nothing but principle," held the same opinion of Thoreau's action. They were always good friends. Mr. Staples, coming out from visiting Thoreau during his sickness, met Mr. Emerson coming in, and said to him, "I never saw a man dying with so much pleasure and peace."

N2525: The vestry of the Unitarian church was filled. There stood this man, ordinarily keeping quite clear of political matters, except in occasional protest against slavery and its aggressions, now stirred to the core, and in praise of a hero after his own heart speaking to his rather cool audience, made up in great part of timid people, with the eloquence of passion. The effect, as I recall it, was wonderful. Many of "those who came to scoff remained to pray."

N2526: His manly sincerity in speaking the true and elevating word, as shown in his letters, is unsurpassed. His counsel had weight because in requiring life on a high plane he was even more severe with himself than with others.

N2527: An over-familiar, officious clergyman, or a gentleman with the conceit of society, or a patronizing editor, found Thoreau, as his friend said of him, "a gendarme good to knock down Cockneys with." Not so the simple, direct people who minded their business, whether scholars, mechanics or laborers. With them he had good relations. He took an active and humane interest in his poor Irish neighbors, lately arrived, and took their part when cheated by mean employers.

N2528: "Even the facts of science," he said, "may dust the mind by their dryness, unless they are in a sense effaced by the dews of fresh and living truth."

N2529: In a letter to Mr. Emerson from Staten Island, Thoreau, probably thinking that the weeds would cheer up in his friend's garden now that he was gone, wrote, "I like to think of your living on the banks of the Mill-brook, in the midst of the garden with all its weeds; for what are botanical distinctions at this distance?"

N2530: How Thoreau rejoiced in his lot, as he found it, appears in his journal for 1856: "God could not be unkind to me if he should try. I have never got over my surprise that I should have been born into the most estimable place in all the world, and in the very nick of time too."

N2531: This passage brings up the lines in "May-Day" beginning—

Ah! well I mind the calendar,
Faithful through a thousand years,
Of the painted race of flowers.

The quotation in the following sentence is from a verse in George Herbert's poem "Vertue," beginning—

"Sweet rose, whose hue, angrie and brave,
Bids the rash gazer wipe his eye."

Mr. Emerson had such delight in his occasional walks with Thoreau as guide to the *penetralia* of Concord woods, and had

such respect for his mind, that he wished that he and his literary and cosmopolitan friends in Boston should know one another, but Thoreau could not be lured to the city. In a lecture on Clubs this wish found voice:—

"Here is a man who has seen Balaclava, the clubs of Paris, was presented at St. James's, has seen the wreckers at Florida, knows the wrath of Kansas and Montana. And here, on the other side, is my friend who knows nothing and nobody out of his parish. He is the pride of his maiden aunt, and knows muskrats and willows; never went to New York but once in his life. But if the other was a cosmorama, and had seen more than his share, my friend's eyes are microscopes, have seen down into that infinite world which stretches away into the invisible; and he had the advantage that the spot of ground on which he stood was sweeter to him than the whole world beside. Now we cannot spare either, but must have both."

N2532: A field will yield several crops at once and divide them among owners and trespassers. Emerson, in his "Apology," tells of the crop which he took off his neighbor's field without his missing it, and Thoreau strolling over a Staten Islander's field said, "I took my toll out of the soil in the way of arrow-heads, which may, after all, be the surest crop."

N2533: The charity with which Thoreau regarded the railroad and the telegraph when they invaded his shrines in the woods is remarkable. More than that, one of his most remarkable poems, though in prose, is the passage about the telegraph and its wild harping, given by Mr. Channing in his *Thoreau the Poet-Naturalist*.¹¹⁶

In the extracts from Thoreau's diary, in the volume *Winter*, are many passages on the "Telegraph Harp," but none so fine as the one referred to.

N2534: This reference to Thoreau is from Mr. Emerson's journal, about 1850:—

"Nothing so marks a man as bold imaginative expressions. A complete statement in the imaginative form of an important truth arrests attention, and is repeated and remembered. A phrase or two of that kind will make the reputation of a man. Pythagoras's golden sayings were such, and Socrates's and Mirabeau's and Bonaparte's; and I shall not make a sudden descent if I say that Henry Thoreau promised to make as good sentences in that kind as any American."

Mr. Charles J. Woodbury tells, in his *Talks with Emerson*, of this word which he had from him upon style. After speaking of some of the American historians, he said, "Their style slays. Neither of them lifts himself off his feet. They have no lilt in them. You noticed the marble we have just seen? You remember that marble is nothing but *crystallized* limestone? Well, some writers never get out of the limestone condition. Be airy....Walk upon the ground, but not to sink. It is a fine power, this. Some men have it, prominently the French. How it manifests itself in Montaigne...and in Urquhart's Rabelais! Grimm almost alone of the Germans has it; Borrow had it; Thoreau had it."

N2535: The lines quoted here are all from the poem "Inspiration." Journal, 1839. "August 1. Last night came to me a beautiful poem from Henry Thoreau, 'Sympathy,'—the purest strain and the loftiest, I think, that has yet pealed from this unpoetic American forest. I

hear his verses with as much triumph as I point to my Guido when they praise half poets and half painters."

N2536: In his journal Thoreau wrote:—

"It steads us to be as true to children and boors as God himself. It is the only attitude which will suit all occasions; it only will make the earth yield her increase, and by it do we effectually expostulate with the wind." He speaks of "the charm of Nature's demeanor toward us,—strict conscientiousness and disregard of us when we have ceased to regard ourselves. So she can never offend us. How true she is, and never swerves."

The "terrible Thoreau" appears in his essay called "Life without Principle," in the collection entitled *Miscellanies*.

N2537: It seems to the editor that this was but the expression of a mood. Thoreau's skill, exactness and remarkable powers, all backed by character, made his friend long to watch him with pride achieve something in those fields for which he recognized his own unfitness. This passage was written before Thoreau's death. His life had not yet the benefit of perspective, nor had his influence on thought and life and taste of multitudes here and abroad appeared. As has been already said, and this sketch shows, the friends could not always thrive in conversation, and Mr. Emerson had not then had opportunity to read much in the journals. Later he read in them with increasing delight and surprise, and approached his friend through them as never before. He would not then have written, as he did in his journal of 1848:—

"Henry Thoreau is like the wood-god who solicits the wandering poet and draws him into 'antres vast and desarts idle,' and bereaves him of his

memory, and leaves him naked, plaiting vines and with twigs in his hand. Very seductive are the first steps from the town to the woods, but the end is want and madness."

But the dose of Nature that sufficed for Emerson was not enough for Thoreau.

N2538: Readers of Thoreau will not forget the passage in which he tells of his visits in the Walden cabin in the long winter evenings, from "the original proprietor who is reported to have dug Walden Pond," and his neighbor there, the "elderly dame, invisible to most persons, in whose odorous herb-garden I love to stroll."

N2539: I find this undated sentence among notes relative to Thoreau and so marked:—

"The man of men, the only man you have seen (if you have seen one) is he who is immovably centred."

This scrap also from the journal of 1852:—

"Henry T. rightly said the other evening, talking of lightning-rods, that the only rod of safety was in the vertebræ of his own spine."

CARLYLE

SHORTLY AFTER the death of Carlyle, the Massachusetts Historical Society invited Mr. Emerson to speak of his friend at their meeting, held in February, 1881. He was no longer able to write an address, but, unwilling to be silent at the meeting held in the great writer's honor, or to disappoint expectation entirely, read this short paper. Most of it is taken from a letter written by him soon after his visit to Carlyle, in 1848, and to this a few passages from the journals were added. Hence this account of Carlyle has the characteristics of a letter written to near friends who well knew the honor and affection in which the writer held its subject. Secure in this knowledge, he could show them the man at close range—even his less lovely traits. Emerson's tastes and methods were foreign to Carlyle, and above all his good hope; yet Carlyle could not but love and praise him, and never forgot the help that Emerson's grateful recognition in person of his early work, before its acceptance at home, had been to him. In these particulars there is a striking similarity to Carlyle's relations with his other friend, John Sterling. Emerson knew the brave purpose and utter loyalty to truth of Carlyle, and delighted in his gigantic power of

expression. Knowing and loving his virtues, he persistently ignored his prejudices and faults.

These men, born with the ocean between them, had each in early manhood done the other great service. Each saw that the other's metal rang true, though of different temper. One worshipped earnest strength, the other beauty in its largest sense. One worked with the heat of the blast-furnace, the other with sun-heat. With temperaments so different, it was well that the sea remained between them, but their friendship endured as long as life.

This paper was printed by the Historical Society among their *Proceedings*; also in *Scribner's Magazine* for May, 1881. In connection with it, the passages relating to Carlyle, in *English Traits*, chapters I. and XIV., may be referred to, and the review of *Past and Present*, among the papers from the *Dial*, printed in the volume *Natural History of Intellect*; also the *Correspondence of Carlyle and Emerson*, and the frequent mention of Carlyle in the *Correspondence of Emerson and Sterling*.

N2540: In a letter written to Carlyle in 1837, hence long before Webster's defection from the cause of Freedom, Mr. Emerson, with prophetic humor, called him "a good man, and as strong as if he were a sinner." Carlyle recognized in him "a sufficient, effectual man, whom one must wish well to and prophesy well of," and saw in his face "that 'indignation' which, if it do not make 'verses,' makes *useful* way in the world." The next year Carlyle was struck with his imposing appearance, of which he gave a wonderful description,¹¹⁷ and said, "As a Logic-fencer, Advocate, or Parliamentary Hercules, one would incline to back him at first sight against all the extant world."

¹¹⁷ *Correspondence*, vol. i., p. 260.

N2541: In a letter from London in March, 1848, when the French Revolution and the Chartist demonstrations at home alarmed the English, Mr. Emerson, telling of the conversation at a dinner-party at Mr. Baring's, said, "Carlyle declaimed a little in the style of that raven prophet who cried 'Woe to Jerusalem' just before its fall.... All his methods included a good deal of killing."

In a letter written to a friend, on his voyage home, Mr. Emerson tells how, when challenged by Carlyle and Arthur Helps as to men "who had the American idea," he assured them "There were such monsters hard-by the setting sun, who believed in a future such as was never a past.... I sketched the Boston fanaticism of right and might without bayonets or bishops, every man his own king, and all coöperation necessary and extemporaneous. Of course my men went wild at the denying to society the beautiful right to kill and imprison. But we stood fast for milk and acorns, told them that musket-worship was perfectly well known to us, that it was an old bankrupt, but that we had never seen a man of sufficient valor and substance quite to carry out the other, which was nevertheless as sure as Copernican astronomy," etc.¹¹⁸

N2542: Immediately after Mr. Emerson's return in 1848 from England, where was great suffering among the poor, he and his wife tried to introduce the use of Indian meal into England through Carlyle and his philanthropic friends. They sent out first meal, and then corn on the ear, with directions as to the various ways it might be cooked, which recipes were in some sort tried by Mrs. Carlyle and Lady Ashburton, but British conservatism could not be overcome. Carlyle tried to take an interest and make civil speeches, but, in the end, human nature burst out, "The Johnny-

¹¹⁸ *Letters from Ralph Waldo Emerson to a Friend*. Houghton, Mifflin & Co., 1899.

cake is good, the twopence-worth of currants in it too are good; but if you offer it as a bit of baked ambrosia, Ach Gott!"

N2543: John Sterling, in a letter to Emerson, in 1844, said: "Carlyle, our far greater Tacitus, in truth hates all poetry except for that element in it which is not poetic at all, and aims at giving a poetic completeness to historic fact. He is the greatest of moralists and politicians, a gigantic anti-poet."

N2544: Mr. Emerson, however, shows another view of Carlyle's attitude in the journal of 1834: "Goethe and Carlyle and perhaps Novalis have an undisguised dislike or contempt for common virtue standing on common principles. Meantime they are dear lovers, steadfast maintainers of the pure ideal morality. But they worship it as the highest beauty; their love is artistic. Praise Socrates to them, or Fénelon, much more any inferior contemporary good man, and they freeze at once into silence. It is to them sheer prose."

N2545: In spite of Carlyle's strictures on poetry, Mr. Emerson, when he read *Sartor Resartus*, felt that there was a poetic element in him, and wrote in his journal in 1833: "As to Carlyle, he is an exemplification of Novalis's maxim concerning the union of Poetry and Philosophy. He has married them, and both are the gainers. Who has done so before as truly and as well? *Sartor Resartus* is a philosophical poem."

N2546: In the essay on "Aristocracy," in this volume (page 63), is a passage on the test that times of riot or revolution put on the scholar's manhood, and Mr. Emerson took pride in his friend's steadfast courage on behalf of the common weal.

Throughout the journals are expressions of the comfort he took in his brother across the sea, and the pleasure and pride with which he read each new work sent by him. Many of these will appear in the volumes made up of passages selected from the journals, which the editor hopes ere long to prepare.

GEORGE L. STEARNS

MR. STEARNS was born in Medford and made his home there throughout his life. He early went into business in Boston and was associated in the business of ship-chandlery with Albert Fearing. Later he was engaged in the manufacture of sheet and pipe lead. His great energy, clear head and integrity made him respected and highly successful in whatever business he undertook. He was an excellent citizen. A "Conscience Whig" in 1846, he of course became a "Freesoiler" in 1848, and thereafter in the midst of his busy life gave time and thought and money lavishly to the anti-slavery cause, and especially to aid Kansas in her struggle. At that time he became acquainted with John Brown. Not only did Mr. Stearns, in his capacity as an officer of the Kansas Aid Society, furnish him with rifles, ammunition and supplies, but he personally contributed Colt's revolvers to the value of thirteen hundred dollars. He did not know of Brown's design to make the Harper's Ferry raid, but as an officer of the Kansas Aid Society, fearing that Brown might make some aggressive move into a slave state, wrote to remind him that he held his rifles in trust, only to be used in Kansas. While John Brown was undergoing his trial, Mrs.

Stearns sent Brackett, the sculptor, to take the measurements and make the necessary sketches for a bust of the old warrior in the prison at Charlestown, Virginia. The bust still adorns the Stearns house in Medford.

During the War of the Rebellion Mr. Stearns was a tireless and effective worker on the side of freedom, but, like his friend John M. Forbes, kept his name out of the papers. Yet he was the founder of the *Commonwealth* and *The Right Way* newspapers, and active in the Loyal Publication Society. He had urged the arming of negroes at a time when it was exceedingly difficult to recruit more white troops. When it was decided to raise colored regiments, Governor Andrew made Mr. Stearns chairman of a committee to do so. He assumed the most difficult and delicate part of the work, the recruiting negroes from Canada, and in the Southwest. In this he was wonderfully successful, and public opinion, at first hostile, rapidly changed. This committee raised the 54th and 55th Massachusetts Regiments of infantry, and the 5th Massachusetts cavalry. Secretary Stanton commissioned Mr. Stearns a major, and he recruited for the regiments of United States colored troops.

Major Stearns died in middle life in April, 1867. In a notice of his life in the *Commonwealth* it was truly said of him: "Major Stearns saw the working out and full consummation of the great principles to which his life was devoted; freedom everywhere, the slave free, and a citizen, and a soldier, and a voter—all this he saw before he passed on."

N2547: In the Senate Document of the 36th Congress, No. 278, is the report of this committee. At the end of his long examination, fearlessly met, a senator asked Mr. Stearns, "Do you disapprove of such an action as that at Harper's Ferry?" He answered: "I should have disapproved it if I had known of it in advance. Since

then I have changed my opinion. I believe John Brown to be the Representative Man of this century, as Washington of the last. The Harper's Ferry affair, and the capacity shown by the Italians for self-government, are the great events of the age; one will free Europe and the other America."

MISCELLANIES

THE LORD'S SUPPER

MR. EMERSON did not wish to have his sermons published. All that was worth saving in them, he said, would be found in the Essays. Yet it seemed best, to Mr. Cabot and to Mr. Emerson's family, that this one sermon should be preserved. A record of a turning-point in his life, it showed at once his thought and his character; for he not only gives the reasons why he believes the rite not authoritatively enjoined, and hence recommends its modification or discontinuance, but with serenity and sweetness renders back his trust into his people's hands, since he cannot see his way longer to exercise it as most of them desire.

In the month of June, 1832, Mr. Emerson had proposed to the church, apparently with hope of their approval, that the Communion be observed only as a festival of commemoration, without the use of the elements. The committee to whom the proposal was referred made a report expressing confidence in him, but declining to advise the change, as the matter was one which they could not properly be called upon to decide.

The question then came back to the pastor, whether he was willing to remain in his place and administer the rite in the usual form.

He went alone to the White Mountains, then seldom visited, to consider the grave question whether he was prepared, rather than to continue the performance of a part of his priestly office from which his instincts and beliefs recoiled, to sacrifice a position of advantage for usefulness to his people to whom he was bound by many ties, and in preparation for which he had spent long years. He wrote, at Conway, New Hampshire: "Here among the mountains the pinions of thought should be strong, and one should see the errors of men from a calmer height of love and wisdom." His diary at Ethan Allan Crawford's contains his doubts and questionings, which Mr. Cabot has given in his Memoir. Yet there was but one answer for him, and after a fortnight, he came back clear in his mind to give his decision, embodied in this sermon, to his people. On the same day that it was preached, he formally resigned his pastorate. The church was loth to part with him. It was hoped that some other arrangement might be made. Mr. Cabot learned that "several meetings were held and the proprietors of pews were called in, as having 'an undoubted right to retain Mr. Emerson as their pastor, without reference to the opposition of the church.' At length, after two adjournments and much discussion, it was decided by thirty votes against twenty-four to accept his resignation. It was voted at the same time to continue his salary for the present."

Thus Mr. Emerson and his people parted in all kindness, but, as Mr. Cabot truly said, their difference of views on this rite "was in truth only the symptom of a deeper difference which would in any case sooner or later have made it impossible for him to retain his office; a disagreement not so much about particular doctrines

or observances as about their sanction, the authority on which all doctrines and observances rest."

In the farewell letter which Mr. Emerson wrote to the people of his church, he said:—

"I rejoice to believe that my ceasing to exercise the pastoral office among you does not make any real change in our spiritual relation to each other. Whatever is most desirable and excellent therein remains to us. For, truly speaking, whoever provokes me to a good act or thought has given me a pledge of his fidelity to virtue,—he has come under bonds to adhere to that cause to which we are jointly attached. And so I say to all you who have been my counsellors and coöperators in our Christian walk, that I am wont to see in your faces the seals and certificates of our mutual obligations. If we have conspired from week to week in the sympathy and expression of devout sentiments; if we have received together the unspeakable gift of God's truth; if we have studied together the sense of any divine word; or striven together in any charity; or conferred together for the relief or instruction of any brother; if together we have laid down the dead in a pious hope; or held up the babe into the baptism of Christianity; above all, if we have shared in any habitual acknowledgment of the benignant God, whose omnipresence raises and glorifies the meanest offices and the lowest ability, and opens heaven in every heart that worships him,—then indeed we are united, we are mutually debtors to each other of faith and hope, engaged to persist and confirm each other's hearts in obedience to the Gospel. We shall not feel that the nominal changes and little separations of this world can release us from the strong cordage of this spiritual bond. And I entreat you to consider how truly blessed will have been our connection if, in this manner, the memory of it shall serve to bind each one of us more strictly to the practice of our several duties."

N2548: The doctrine of the offices of Jesus, even in the Unitarianism of Dr. Channing, was never congenial to Mr. Emerson's mind. He notes the same with regard to his father, and even to his Aunt Mary, in spite of her Calvinism. Any interposed personality between the Creator and the created was repugnant to him. Even in March, 1831, he is considering in his journal that his hearers will say, "To what purpose is this attempt to explain away so safe and holy a doctrine as that of the Holy Spirit? Why unsettle or disturb a faith which presents to many minds a helpful medium by which they approach the idea of God?" and he answers, "And this question I will meet. It is because I think the popular views of this principle are pernicious, because it does put a medium, because it removes the idea of God from the mind. It leaves some events, some things, some thoughts, out of the power of Him who causes every event, every flower, every thought. The tremendous idea, as I may well call it, of God is screened from the soul.... And least of all can we believe—Reason will not let us—that the presiding Creator commands all matter and never descends into the secret chambers of the Soul. There he is most present. The Soul rules over matter. Matter may pass away like a mote in the sunbeam, may be absorbed into the immensity of God, as a mist is absorbed into the heat of the Sun—but the soul is the kingdom of God, the abode of love, of truth, of virtue."

N2549: In the hope of satisfying those of his people who held to the letter of the Scriptural Law, Mr. Emerson made the foregoing clear statement with regard to the authority for the rite, from the professional point of view. It seems quite unlike his usual method, and there is little doubt that in it appears the influence of his elder brother, William, whose honest doubts had led him to abandon even earlier the profession of his fathers. In

the introductory note to the chapter on Goethe, in *Representative Men*, is given an account of his unsuccessful pilgrimage to Weimar, in hopes that the great mind of Germany could solve these doubts. There is a letter still preserved, written by William, soon after his return, to his venerable kinsman at Concord, Dr. Ripley, in which he explains with great clearness his own reasons for not believing that the Communion rite was enjoined by Jesus for perpetual observance. The argument on scriptural grounds there clearly stated is substantially the same as that which his younger brother makes use of in the beginning of this sermon. Thus far he has spoken of outward authority; from this point onward he speaks from within—the way native to him.

N2550: Mr. Emerson left the struggles of the Past behind, and did not care to recall them. Thus, writing of Lucretia Mott, whom he met when giving a course of lectures in Philadelphia, in January, 1843, he said:—

“Me she taxed with living out of the world, and I was not much flattered that her interest in me respected my rejection of an ordinance, sometime, somewhere. Also yesterday—for Philadelphian ideas, like love, do creep where they cannot go—I was challenged on the subject of the Lord’s Supper, and with great slowness and pain was forced to recollect the grounds of my dissent in that particular. You may be sure I was very tardy with my texts.”

Mr. Emerson’s journal during the period of trial and decision, in the mountains, shows that he was reading with great interest the life of George Fox. The simplicity of the Society of Friends, their aversion to forms and trust in the inward light, always appealed to him.

In his essay on *The Preacher* he says:—

“The supposed embarrassments to young clergymen exist only to feeble wills....That gray deacon, or respectable matron with Calvinistic antecedents, you can readily see, would not have presented any obstacle to the march of St. Bernard or of George Fox, of Luther or of Theodore Parker.” This hints at the help he had found in the Quaker’s history in his time of need.

HISTORICAL DISCOURSE AT CONCORD

MR. EMERSON'S Discourse was printed soon after its delivery, and with it, in an Appendix, the following notice of the celebration of the second centennial anniversary of the incorporation of the town, sent to him by "a friend who thought it desirable to preserve the remembrance of some particulars of this historical festival."

"At a meeting of the town of Concord, in April last, it was voted to celebrate the Second Centennial Anniversary of the settlement of the town, on the 12th September following. A committee of fifteen were chosen to make the arrangements. This committee appointed Ralph Waldo Emerson, Orator, and Rev. Dr. Ripley and Rev. Mr. Wilder, Chaplains of the Day. Hon. John Keyes was chosen President of the Day.

"On the morning of the 12th September, at half past 10 o'clock, the children of the town, to the number of about 500, moved in procession to the Common in front of the old church and court-house and there opened to the right and left, awaiting the procession of citizens. At 11 o'clock, the Concord Light Infantry, under Captain Moore, and the Artillery under Captain Buttrick, escorted the civic procession, under the direction of

Moses Prichard as Chief Marshal, from Shepherd's hotel through the lines of children to the Meeting-house. The South gallery had been reserved for ladies, and the North gallery for the children; but (it was a good omen) the children overran the space assigned for their accommodation, and were sprinkled throughout the house, and ranged on seats along the aisles. The old Meeting-house, which was propped to sustain the unwonted weight of the multitude within its walls, was built in 1712, thus having stood for more than half the period to which our history goes back. Prayers were offered and the Scriptures read by the aged minister of the town, Rev. Ezra Ripley, now in the 85th year of his age;—another interesting feature in this scene of reminiscences. A very pleasant and impressive part of the services in the church was the singing of the 107th psalm, from the New England version of the psalms made by Eliot, Mather, and others, in 1639, and used in the church in this town in the days of Peter Bulkeley. The psalm was read a line at a time, after the ancient fashion, from the Deacons' seat, and so sung to the tune of St. Martin's by the whole congregation standing.

"Ten of the surviving veterans who were in arms at the Bridge, on the 19th April, 1775, honored the festival with their presence. Their names are Abel Davis, Thaddeus Blood, Tilly Buttrick, John Hosmer, of *Concord*; Thomas Thorp, Solomon Smith, John Oliver, Aaron Jones, of *Acton*; David Lane, of *Bedford*; Amos Baker, of *Lincoln*.

"On leaving the church, the procession again formed, and moved to a large tent nearly opposite Shepherd's hotel, under which dinner was prepared, and the company sat down to the tables, to the number of four hundred. We were honored with the presence of distinguished guests, among whom were Lieutenant-Governor Armstrong, Judge Davis, Alden Bradford (descended from the 2^d governor of Plymouth Colony), Hon. Edward Everett, Hon. Stephen C. Phillips of Salem, Philip Hone, Esq., of New York, General Dearborn, and Lieutenant-Colonel R. C. Winthrop (descended from the 1st governor of Massachusetts). Letters were read from several gentlemen expressing their regret at being deprived of the

pleasure of being present on the occasion. The character of the speeches and sentiments at the dinner were manly and affectionate, in keeping with the whole temper of the day.

"On leaving the dinner-table, the invited guests, with many of the citizens, repaired to the court-house to pay their respects to the ladies of Concord, who had there, with their friends, partaken of an elegant collation, and now politely offered coffee to the gentlemen. The hall, in which the collation was spread, had been decorated by fair hands with festoons of flowers, and wreaths of evergreen, and hung with pictures of the Fathers of the Town. Crowded as it was with graceful forms and happy faces, and resounding with the hum of animated conversation, it was itself a beautiful living picture. Compared with the poverty and savageness of the scene which the same spot presented two hundred years ago, it was a brilliant reverse of the medal; and could scarcely fail, like all the parts of the holiday, to lead the reflecting mind to thoughts of that Divine Providence, which, in every generation, has been our tower of defence and horn of blessing.

"At sunset the company separated and retired to their homes; and the evening of this day of excitement was as quiet as a Sabbath throughout the village."

Within the year, Mr. Emerson had come to make his home for life in the ancestral town, and had become a householder. Two days after the festival, he drove to Plymouth in a chaise, and was there married to Lidian Jackson, and immediately brought his bride to her Concord home.

His aged step-grandfather was the senior chaplain at the Celebration, and his brother Charles, who was to live with him in the new home, was one of the marshals.

In preparation for this address Mr. Emerson made diligent examination of the old town records, and spent a fortnight in Cambridge consulting the works on early New England in

the College Library. I reproduce most of his references to his authorities exactly, although there are, no doubt, newer editions of some of the works.

N2551: This story is from Bede's *Ecclesiastical History* (chapter xiii., Bohn's *Antiquarian Library*). Mr. Emerson used it in full as the exordium of his essay on Immortality, in *Letters and Social Aims*.

N2552: The poem "Hamatreya," wherein appear the names of many of these first settlers, might well be read in connection with the opening passages of this address.

Mr. Emerson's right of descent to speak as representative of Peter Bulkeley, who was the spiritual arm of the settlement, as Simon Willard was its sword-arm, may here be shown: Rev. Joseph Emerson of Mendon (son of Thomas of Ipswich, the first of the name in this country) married Elizabeth, daughter of Rev. Edward Bulkeley, who succeeded his father, the Rev. Peter Bulkeley, as minister of Concord. Edward, the son of Joseph of Mendon and Elizabeth Bulkeley, was father of Rev. Joseph Emerson of Malden, who was father of Rev. William Emerson of Concord, who was father of Rev. William Emerson of Harvard and Boston, the father of Ralph Waldo Emerson.

N2553: Neal's *History of New England*, vol. i., p. 132.

N2554: Neal, vol. i., p. 321.

N2555: Shattuck's *History of Concord*, p. 158.

N2556: On September 2, 1635, the General Court passed this order:—

"It is ordered that there shalbe a plantacon att Musketequid & that there shalbe 6 myles of land square to belong to it, & that the inhabitants thereof shall have three yeares imunities from all publ[ic] charges except traineings; Further, that when any that plant there shall have occacon of carryeing of goods thither, they shall repaire to two of the nexte magistrates where the teames are, whoe shall have the power for a yeare to presse draughts, att reasonable rates, to be payed by the owners of the goods, to transport their goods thither att seasonable tymes: & the name of the place is changed & here after to be called Concord."

N2557: Shattuck, p. 5.

N2558: In his lecture on Boston (published in the volume *Natural History of Intellect*) Mr. Emerson gives an amusing enumeration of some troubles which seemed so great to the newcomers from the Old World: he mentions their fear of lions, the accident to John Smith from "the most poisonous tail of a fish called a sting-ray," the circumstance of the overpowering effect of the sweet fern upon the Concord party, and the intoxicating effect of wild grapes eaten by the Norse explorers, and adds: "Nature has never again indulged in these exasperations. It seems to have been the last outrage ever committed by the sting-rays, or by the sweet fern, or by the fox-grapes. They have been of peaceable behavior ever since."

N2559: Johnson's *Wonder-Working Providence*, chap. xxxv. Mr. Emerson abridged and slightly altered some sentences.

N2560: Mourt, *Beginning of Plymouth*, 1621, p. 60.

N2561: Johnson, p. 56. Josselyn, in his *New England's Rarities Discovered*, speaks with respect of "Squashes, but more truly squontersquashes; a kind of mellon, or rather gourd;...some of these are green; some yellow; some longish like a gourd; others round, like an apple: all of them pleasant food, boyled and buttered, and seasoned with spice. But the yellow squash—called an apple-squash (because like an apple) and about the bigness of a pome-water is the best kind." Wood, in his *New England Prospect*, says: "In summer, when their corn is spent, isquotersquashes is their best bread, a fruit much like a pumpkin."

N2562: Nashawtuck, a small and shapely hill between the Musketaquid and the Assabet streams, at their point of union, was a pleasant and convenient headquarters for a sagamore of a race whose best roadway for travel and transportation was a deep, quiet stream, the fish of which they ate, and also used for manure for their cornfields along the bluffs. Indian graves have been found on this hill.

N2566: Shattuck, p. 6.

The old Middlesex Hotel, which stood during the greater part of the nineteenth century on the southwest side of the Common, opposite the court- and town-houses, had fallen into decay in 1900, and was bought and taken down by the town as an improvement to the public square to commemorate the one hundred and twenty-

fifth anniversary of Concord Fight. It is probable that Jethro's Oak, under which the treaty was made, stood a little nearer the house of Rev. Peter Bulkeley, the site of which, about one hundred paces distant on the Lowell road, is now marked by a stone and bronze tablet.

With the exception of the anecdotes in this and the following sentence, almost the whole of this account of the theory and practice of the New England town-meeting was used by Mr. Emerson in his oration, given in December, 1870, before the New England Society in New York. The greater part of the matter used in that address is included in the lecture on Boston, in the volume *Natural History of Intellect*.

The New England Society of New York recently published the Orations delivered before it previous to 1871, including Mr. Emerson's, as far as it could be recovered from the scattered manuscript, and the newspaper reports of the time.

N2582: Hutchinson's *Collection*, p. 27.

N2583: Shattuck, p. 20. "The Government, 13 Nov., 1644, ordered the county courts to take care of the Indians residing within their several shires, to have them civilized, and to take order, from time to time, to have them instructed in the knowledge of God."

N2584: Shepard's *Clear Sunshine of the Gospel*, London, 1648.

N2585: These rules are given in Shattuck's *History*, pp. 22–24, and were called "Conclusions and orders made and agreed upon by divers Sachems and other principal men amongst the Indians at Concord in the end of the eleventh Month (called January) An. 1646."

The following are interesting specimens of these:—

Rule 2. "That there shall be no more Powwawing amongst the Indians. And if any shall hereafter powwaw, both he that shall powwaw, and he that shall procure him to powwaw, shall pay twenty shillings apiece."

Rule 4. "They desire they may understand the wiles of Satan, and grow out of love with his suggestions and temptations."

Rule 5. "That they may fall upon some better course to improve their time than formerly."

Rule 15. "They will wear their haire comely, as the English do, and whosoever shall offend herein shall pay four shillings."

Rule 23. "They shall not disguise themselves in their mournings as formerly, nor shall they keep a great noyse by howling."

Rule 24. "The old ceremony of a maide walking alone and living apart so many days, [fine] twenty shillings."

N2609: "Tradition has handed down the following anecdote. A consultation among the Indian chiefs took place about this time on the high lands in Stow, and, as they cast their eyes towards Sudbury and Concord, a question arose which they should attack first. The decision was made to attack the former. One of the principal chiefs said: 'We no prosper if we go to Concord—the Great Spirit love that people—the evil spirit tell us not to go—they have a great man there—he *great pray*.' The Rev. Edward Bulkeley was then minister of the town, and his name and distinguished character were known even to the red men of the forest."—Shattuck's *History*, p. 59, note.

N2610: On this occasion the name of Hoar, since honored in Concord through several generations, came to the front. John Hoar, the first practitioner of law in Concord, an outspoken man of sturdy independence, who, for uttering complaints that justice was denied him in the courts, had been made to give bonds for good behavior and "disabled to plead any cases but his oune in this jurisdiction," who had been fined £10 for saying that "the Blessing which his Master Bulkeley pronounced in dismissing the publique Assembly was no more than vane babling," and was

twice fined for non-attendance at public worship, proved to be the only man in town who was willing to take charge of the Praying Indians of Nashobah, whom the General Court ordered moved to Concord during Philip's War. The magistrates who had persecuted him had to turn to him, and he made good provision on his own place for the comfort and safe-keeping of these unfortunates, and their employment, when public opinion was directed against them with the cruelty of fear. Soon, however, Captain Mosley, who had been secretly sent for by some citizens, came with soldiers into the meeting-house, announced to the congregation that he had heard that "there were some heathen in town committed to one Hoar, who, he was informed, were a trouble and disquiet to them;" therefore, if the people desired it, he would remove them to Boston. No one made objection, so he went to Mr. Hoar's house, counted the Indians and set a guard, Hoar vigorously protesting. He came next day; Hoar bravely refused to give them up, so Mosley removed them by violence and carried the Indians to Deer Island, where they suffered much during the winter. See Walcott's *Concord in the Colonial Period*.

N2615: Hutchinson's *History*, vol. i., p. 336.

The month of April has been fateful for Concord, especially its nineteenth day. On that day the military company under

Lieutenant Heald marched to Boston to take part in the uprising of the freemen of the colony against Andros. On that same day, in 1775, the minute-men and militia of Concord, promptly reinforced by the soldiers of her daughter and sister towns, marched down to the guarded North Bridge and returned the fire of the Royal troops in the opening battle of the Revolution. Again on the nineteenth of April, 1861, the "Concord Artillery" (so-called, although then a company of the Fifth Infantry, M. V. M.) left the village for the front in the War of the Rebellion; and yet again in the last days of April, 1898, the same company, then, as now, attached to the Sixth Regiment, M. V. M., marched from the village green to bear its part in the Spanish War.

N2616: Town Records.

N2617: The following minutes from the Town Records in 1692 may serve as an example:—

Craggin, and, for our incouragement, and before us, did promise that, upon the consummation of the said marriage, he, the said John Shepard, sen. would give to his son, John Shepard, jun. the one half of his dwelling house, and the old barn, and the pasture before the barn; the old plow-land, and the old horse, when his colt was fit to ride, and his old oxen, when his steers were fit to work. All this he promised upon marriage as above said, which marriage was consummated upon

March following, which is two years ago, come next March. Dated Feb. 25, 1692. Taken on oath before me. Wm. Johnson."

N2619: Records, Nov. 1711.

N2620: Records, May, 1712.

N2621: Records, 1735.

N2622: Whitfield in his journal wrote: "About noon I reached Concord. Here I preached to some thousands in the open air; and comfortable preaching it was. The hearers were sweetly melted down....The minister of the town being, I believe, a true child of God, I chose to stay all night at his house that we might rejoice together. The Lord was with us. The Spirit of the Lord came upon me and God gave me to wrestle with him for my friends, especially those then with me....Brother B—s, the minister, broke into floods of tears, and we had reason to cry out it was good for us to be here."

N2623: Church Records, July, 1792.

N2624: The Rev. Daniel Bliss has left the name of having been an earnest, good man, evidently emotional. His zealous and impassioned preaching gave offence to some of the cooler and more conservative clergy, and indeed bred discord in the church of Concord. The "aggrieved brethren" withdrew, and, for want of a church, held public worship at a tavern where was the sign of a black horse, hence were called "the Black Horse Church." Their

complaints preferred against Mr. Bliss resulted in councils which drew in most of the churches of Middlesex into their widening vortex. Yet he remained the honored pastor of the town until his death. His daughter Phebe married the young William Emerson, his successor; he was therefore Mr. Emerson's great-grandfather.

N2626: Town Records.

N2627: Town Records.

N2628: The spirited protest of this County Convention, presided over by Hon. James Prescott of Groton, is given in full in *Shattuck's History*, pp. 82–87.

N2629: General Gage, the Governor, having refused to convene the General Court at Salem, the Provincial Congress of delegates from the towns of Massachusetts was called by conventions of the various counties to meet at Concord, October 11, 1774. The delegates assembled in the meeting-house, and organized, with John Hancock as President, and Benjamin Lincoln as Secretary. Called together to maintain the rights of the people, this Congress assumed the government of the province, and by its measures prepared the way for the Revolution.

N2630: This eloquent sermon to the volunteers of 1775, still preserved in MS., is very interesting. The young minister shows them the dignity of their calling, warns them of the besetting sins of New England soldiery, explains to them the invasion of their rights and that they are not rebels, tells them that he believes their

fathers foresaw the evil day and did all in their power to guard the infant state from encroachments of unconstitutional power, and implores the sons to be true to their duty to their posterity. He fully admits the utter gloom of the prospect, humanly considered: would Heaven hold him innocent, he would counsel submission, but as an honest man and servant of Heaven he dare not do so, and with great spirit bids his injured countrymen "Arise! and plead even with the sword, the firelock and the bayonet, the birthright of Englishmen...and if God does not help, it will be because your sins testify against you, otherwise *you may be assured*."

N2631: Journal, July, 1835. "It is affecting to see the old man's [Thaddeus Blood] memory taxed for facts occurring 60 years ago at Concord fight. 'It is hard to bring them up;' he says, 'the truth never will be known.' The Doctor [Ripley], like a keen hunter, unrelenting, follows him up and down, barricading him with questions. Yet cares little for the facts the man can tell, but much for the confirmation of the printed History. 'Leave me, leave me to repose.'"

Thaddeus Blood, who was only twenty years old at the time of Concord fight, later became a schoolmaster, hence was always known as "Master Blood." He was one of the Concord company stationed at Hull, in 1776, which took part in the capture of Lieutenant-Colonel Campbell and his battalion of the 71st (Frazer) Highlanders as they sailed into Boston Harbor, not being aware of the evacuation of the town. They were confined at Concord until their exchange. See *Sir Archibald Campbell of Inverneill, sometime Prisoner of War in the Jail at Concord, Massachusetts*. By Charles H. Walcott, Boston, 1898.

N2632: In his poem in memory of his brother Edward, written by the riverside near the battle-ground, Mr. Emerson alluded to

Yon stern headstone,
Which more of pride than pity gave
To mark the Briton's friendless grave.
Yet it is a stately tomb;
The grand return
Of eve and morn,
The year's fresh bloom,
The silver cloud,
Might grace the dust that is most proud.

N2633: Captain Miles commanded the Concord company that joined the Northern Army at Ticonderoga in August, 1776, as part of Colonel Reed's regiment.

N2634: Judge John S. Keyes, who clearly remembers the incidents of this celebration, seen from a boy's coign of vantage, the top of one of the inner doors of the church, tells me that the ten aged survivors of the battle, who sat in front of the pulpit, bowed in recognition of this compliment by the orator, and then the audience all bowed to them. The sanctity of the church forbade in those days cheering or applause even at a civic festival.

N2635: The following was Mr. Emerson's note concerning his authorities:—

"The importance which the skirmish at Concord Bridge derived from subsequent events, has, of late years, attracted much notice to the incidents of the day. There are, as might be expected, some discrepancies

in the different narratives of the fight. In the brief summary in the text, I have relied mainly on the depositions taken by order of the Provincial Congress within a few days after the action, and on the other contemporary evidence. I have consulted the English narrative in the Massachusetts Historical Collections, and in the trial of Horne (*Cases adjudged in King's Bench*; London, 1800, vol. ii., p. 677); the inscription made by order of the legislature of Massachusetts on the two field-pieces presented to the Concord Artillery; Mr. Phinney's *History of the Battle at Lexington*; Dr. Ripley's *History of Concord Fight*; Mr. Shattuck's narrative in his *History*, besides some oral and some manuscript evidence of eye-witnesses. The following narrative, written by Rev. William Emerson, a spectator of the action, has never been published. A part of it has been in my possession for years: a part of it I discovered, only a few days since, in a trunk of family papers:—

"1775, 19 April. This morning, between 1 and 2 o'clock, we were alarmed by the ringing of the bell, and upon examination found that the troops, to the number of 800, had stole their march from Boston, in boats and barges, from the bottom of the Common over to a point in Cambridge, near to Inman's Farm, and were at Lexington Meeting-house, half an hour before sunrise, where they had fired upon a body of our men, and (as we afterward heard) had killed several. This intelligence was brought us at first by Dr. Samuel Prescott, who narrowly escaped the guard that were sent before on horses, purposely to prevent all posts and messengers from giving us timely information. He, by the help of a very fleet horse, crossing several walls and fences, arrived at Concord at the time above mentioned; when several posts were immediately despatched, that returning confirmed the account of the regulars' arrival at Lexington, and that they were on their way to Concord. Upon this, a number of our minute-men belonging to this town, and Acton, and Lyncoln, with several others that were in readiness, marched out to meet them; while the alarm

company were preparing to receive them in the town. Captain Minot, who commanded them, thought it proper to take possession of the hill above the meeting-house, as the most advantageous situation. No sooner had our men gained it, than we were met by the companies that were sent out to meet the troops, who informed us, that they were just upon us, and that we must retreat, as their number was more than treble ours. We then retreated from the hill near the Liberty Pole, and took a new post back of the town upon an eminence, where we formed into two battalions, and waited the arrival of the enemy. Scarcely had we formed, before we saw the British troops at the distance of a quarter of a mile, glittering in arms, advancing towards us with the greatest celerity. Some were for making a stand, notwithstanding the superiority of their number; but others more prudent thought best to retreat till our strength should be equal to the enemy's by recruits from neighboring towns that were continually coming in to our assistance. Accordingly we retreated over the bridge, when the troops came into the town, set fire to several carriages for the artillery, destroyed 60 bbls. flour, rifled several houses, took possession of the town-house, destroyed 500 lb. of balls, set a guard of 100 men at the North Bridge, and sent up a party to the house of Colonel Barrett, where they were in expectation of finding a quantity of warlike stores. But these were happily secured, just before their arrival, by transportation into the woods and other by-places. In the mean time, the guard set by the enemy to secure the pass at the North Bridge were alarmed by the approach of our people, who had retreated, as mentioned before, and were now advancing with special orders not to fire upon the troops unless fired upon. These orders were so punctually observed that we received the fire of the enemy in three several and separate discharges of their pieces before it was returned by our commanding officer; the firing then soon become general for several minutes, in which skirmish two were killed on each side, and several of the enemy wounded. It may here be observed, by the way, that we were the more cautious to prevent beginning a rupture with the

King's troops, as we were then uncertain what had happened at Lexington, and knew [not]¹¹⁹ that they had began the quarrel there by first firing upon our people, and killing eight men upon the spot. The three companies of troops soon quitted their post at the bridge, and retreated in the greatest disorder and confusion to the main body, who were soon upon the march to meet them. For half an hour, the enemy, by their marches and counter-marches, discovered great fickleness and inconstancy of mind, sometimes advancing, sometimes returning to their former posts; till, at length they quitted the town, and retreated by the way they came. In the mean time, a party of our men (150) took the back way through the Great Fields into the east quarter, and had placed themselves to advantage, lying in ambush behind walls, fences and buildings, ready to fire upon the enemy on their retreat."

N2636: Fifty years after his death the town erected a cenotaph to the memory of its brave young minister, whose body lies by the shore of Otter Creek, near Rutland, Vermont. On it they wrote:—

"Enthusiastic, eloquent, affectionate and pious, he loved his family, his people, his God and his Country, and to this last he yielded the cheerful sacrifice of his life."

N2637: Town Records, Dec. 1775.

N2638: These facts are recorded by Shattuck in his History.

N2639: Bradford's *History of Massachusetts*, vol. ii., p. 113.

¹¹⁹ Mr. Emerson believed the "not" had been accidentally omitted, and it can hardly be questioned that he was right in his supposition.

N2640: Shattuck.

N2641: Town Records, May 3, 1782.

N2642: Town Records, Sept. 9, and Bradford's *History*, vol. i., p. 266.

N2643: The Rev. Grindall Reynolds, late pastor of the First Church in Concord, wrote an interesting account of Shays's Rebellion, and various papers concerning his adopted town which are included in his *Historical and Other Papers*, published by his daughter in 1895.

N2644: Town Records, Oct. 21.

N2645: Town Records, May 7.

N2646: Town Records, 1834 and 1835. In 1903-4 the town, with a population of about 5000, appropriated for public purposes \$65,752, the amount for school purposes being \$28,000.

N2647: The Unitarian and the "Orthodox" (as the Trinitarian Congregationalist society has always been called in Concord) churches have for a century been good neighbors, and for many years have held union meetings on Thanksgiving Day. At the time of Mr. Emerson's discourse it is doubtful if Concord contained a single Catholic or Episcopalian believer. The beginning of the twentieth century finds a larger body of Catholic worshippers than the four other societies contain. Yet all live in charity with one another.

N2648: Mr. Emerson's honored kinsman, Rev. Ezra Ripley, who sat in the pulpit that day, was eighty-four years old, and when, six years later, he died, he had been pastor of the Concord church for sixty-three years.

N2649: Lemuel Shattuck, author of the excellent *History of Concord*, which was published before the end of the year.

N2650: In Mr. Emerson's lecturing excursions during the following thirty-five years, he found with pleasure and pride the sons of his Concord neighbors important men in the building up the prairie and river towns, or the making and operating the great highways of emigration and trade.

LETTER TO PRESIDENT VAN BUREN

APRIL 19, 1838, Mr. Emerson made this entry in his Journal:—

"This disaster of the Cherokees, brought to me by a sad friend to blacken my days and nights! I can do nothing; why shriek? why strike ineffectual blows? I stir in it for the sad reason that no other mortal will move, and if I do not, why, it is left undone. The amount of it, to be sure, is merely a scream; but sometimes a scream is better than a thesis.

.

"Yesterday wrote the letter to Van Buren,—a letter hated of me, a deliverance that does not deliver the soul. I write my journal, I read my lecture with joy; but this stirring in the philanthropic mud gives me no peace. I will let the republic alone until the republic comes to me. I fully sympathize, be sure, with the sentiments I write; but I accept it rather from my friends than dictate it. It is not my impulse to say it, and therefore my genius deserts me; no muse befriends; no music of thought or word accompanies."

Yet his conscience then, and many a time later, brought him to do the brave, distasteful duty.

ADDRESS ON EMANCIPATION IN THE BRITISH WEST INDIES

THE TENTH anniversary of the emancipation by Act of Parliament of all slaves in the insular possessions of Great Britain in the West Indies was celebrated in Concord, in the year 1844, by citizens of thirteen Massachusetts towns, and they invited Mr. Emerson to make the Address. The Rev. Dr. Channing, on whose mind the wrongs of the slave had weighed ever since he had seen them in Santa Cruz, had spoken on Slavery in Faneuil Hall in 1837, had written on the subject, and his last public work had been a speech on the anniversary of the West Indian Emancipation in 1842, in the village of Lenox. The public conscience was slowly becoming aroused, especially among the country people, who had not the mercantile and social relations with the Southerner which hampered the action of many people in the cities. Yet even in Concord the religious societies appear to have closed their doors against the philanthropists who gathered to celebrate this anniversary in 1844, but the energy of the young Thoreau, always a champion of Freedom, secured the use of the Court-House, and he himself rang the bell to call the people together.

It is said that Mr. Emerson, while minister of the Second Church in Boston, had held his pulpit open to speakers on behalf of liberty, and to his attitude in 1835 Harriet Martineau bears witness in her *Autobiography*. After speaking of the temperamental unfitness of these brother scholars, Charles and Waldo, to become active workers in an Abolitionist organization, she says: "Yet they did that which made me feel that I knew them through the very cause in which they did not implicate themselves. At the time of the hubbub against me in Boston, Charles Emerson stood alone in a large company and declared that he would rather see Boston in ashes than that I or anybody should be debarred in any way from perfectly free speech. His brother Waldo invited me to be his guest in the midst of my unpopularity, and during my visit told me his course about this matter of slavery. He did not see that there was any particular thing for him to do in it then; but when, in coaches or steamboats or anywhere else, he saw people of color ill treated, or heard bad doctrine or sentiment propounded, he did what he could, and said what he thought. Since that date he has spoken more abundantly and boldly, the more critical the times became; and he is now, and has long been, identified with the Abolitionists in conviction and sentiment, though it is out of his way to join himself to their organization."

Mr. Cabot in his *Memoir*¹²⁰ gives several pages of extracts from Mr. Emerson's journal showing his feelings at this time, before the slave power, aggressive and advancing, left him, as a lover of Freedom, no choice but to fight for her as he could, by tongue and pen, in seasons of peril.

This Address was printed in England, as well as in America, the autumn after its delivery here. In a letter to Carlyle written

120 Vol. ii., pp. 424-433.

September 1, Mr. Emerson says he is sending proof to the London publisher.

"Chapman wrote to me by the last steamer, urging me to send him some manuscript that had not yet been published in America [hoping for copyright, and promising half profits]....The request was so timely, since I was not only printing a book, but also a pamphlet, that I came to town yesterday and hastened the printers, and have now sent him proofs of all the Address, and of more than half of the book." He requests Carlyle to have an eye to its correct reproduction, to which his friend faithfully attended.

N2651: It was characteristic of Mr. Emerson that, as a corrective to the flush of righteous wrath that man should be capable of

laying hands on another
To coin his labor and sweat,

came his sense of justice, and the power of seeing the planter's side, born into such a social and political condition, by breeding and climatic conditions unable to toil, and with his whole inheritance vested in slaves. In a speech in New York in 1855, Mr. Emerson urged emancipation with compensation to the owners, by general sacrifices to this great end by old and young throughout the North, not as the planters' due, but as recognizing their need and losses. Yet with all due consideration for the planters' misfortune of condition, he said, on the main question, "It is impossible to be a gentleman and not be an abolitionist."

N2652:

Sole estate his sire bequeathed,—

Hapless sire to hapless son,—
Was the wailing song he breathed,
And his chain when life was done.

These lines from "Voluntaries" in the *Poems*, and the stanza which there follows them, are recalled by this passage.

N2653: Granville Sharp (1734–1813) was a broad-minded scholar and determined philanthropist. He left the study of law to go into the ordnance office, which he left, when the American Revolution came on, disapproving of the course of the government. In the case of one of the slaves whom he defended, the Lord Mayor discharged the negro, but his master would not give him up. The case then went before the Court of Kings Bench, and the twelve judges decided in 1772 that a man could not be held in, or transported from, England. In June, 1787, Sharp with Clarkson and ten others, nine of whom were Quakers, formed a committee "for effecting the abolition of the slave trade;" Sharp was chairman. Defeated in Parliament in 1788 and 1789, they were joined by Pitt and Fox in 1790. In 1793 the Commons passed an act for gradual abolition of the trade, which was rejected by the Peers. This occurred again in 1795 and 1804. In 1806, the Fox and Grenville Ministry brought forward abolition of the trade as a government measure. It was carried in 1807. Then the enemies of slavery began to strive for its gradual abolition throughout the British dominions, Clarkson, Wilberforce and Buxton being the principal leaders. The course of events, however, showed that immediate emancipation would be a better measure. The government brought this forward in 1823, modified by an apprenticeship system. The bill with this feature and some compensation to owners was passed in 1833.

N2654: In the essay on Self-Reliance Mr. Emerson said: "An institution is the lengthened shadow of one man; as Monachism, of the Hermit Antony; the Reformation, of Luther; Quakerism, of Fox; Methodism, of Wesley; Abolition, of Clarkson."

N2655: The "prædials" seem to have been the slaves born into captivity, as distinguished from imported slaves.

N2656: *Emancipation in the West Indies: A Six Months' Tour in Antigua, Barbadoes and Jamaica, in the year 1837.* By J. A. Thome and J. H. Kimball, New York, 1838.

N2657: This was very soon after the coronation of the young Queen Victoria, which occurred in the previous year.

N2658: "All things are moral, and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, color and motion; that every globe in the remotest heaven, every chemical change from the rudest crystal up to the laws of life...every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments."—*Nature, Addresses and Lectures*, p. 40. See also the last sentence in "Prudence," *Essays, First Series*.

N2659: "For he [a ruler] is the minister of God to thee for good. But if thou do that which is evil, be afraid; for he beareth not the sword in vain: for he is the minister of God, a revenger to execute wrath upon him that doeth evil." *Epistle to the Romans*, xiii. 4.

N2660: The cause for Mr. Emerson's indignation was great and recent. His honored townsman, Samuel Hoar, Esq., sent by the State of Massachusetts as her commissioner to South Carolina to investigate the seizures, imprisonments, punishments, and even sale of colored citizens of Massachusetts who had committed no crime, had been expelled with threats of violence from the city of Charleston. (See "Samuel Hoar," in *Lectures and Biographical Sketches*.)

N2661:

A union then of honest men,
Or union never more again.

"Boston." *Poems*.

N2662: John Quincy Adams, who, though disapproving, as untimely, the legislation urged on Congress by the abolitionists, yet fought strongly and persistently against the rules framed to check their importunity, as inconsistent with the right of petition itself.

N2663: Here comes in the doctrine of the Survival of the Fittest that appears in the "Ode inscribed to W. H. Channing," but, even more than there, tempered by faith in the strength of humanity. See the "Lecture on the Times," given in 1841 (*Nature, Addresses and Lectures*, p. 220), for considerations on slavery more coolly philosophical than Mr. Emerson's warm blood often admitted of, during the strife for liberty in the period between the Mexican and Civil Wars.

N2664:

To-day unbind the captive,
So only are ye unbound;
Lift up a people from the dust,
Trump of their rescue, sound!

"Boston Hymn," *Poems*.

N2665: In the early version of the "Boston" poem were these lines:—

O pity that I pause!
The song disdaining shuns
To name the noble sires, because
Of the unworthy sons.

.

Your town is full of gentle names,
By patriots once were watchwords made;
Those war-cry names are muffled shames
On recreant sons mislaid.

WAR

IN THE winter and early spring of 1838, the American Peace Society held a course of lectures in Boston. This lecture was the seventh in the course. Mr. Alcott wrote in his diary at that time:—

"I heard Emerson's lecture on *Peace*, as the closing discourse of a series delivered at the Odeon before the American Peace Society....After the lecture I saw Mr. Garrison, who is at this time deeply interested in the question of Peace, as are many of the meekest and noblest souls amongst us. He expressed his great pleasure in the stand taken by Mr. Emerson and his hopes in him as a man of the new age. This great topic has been brought before the general mind as a direct consequence of the agitation of the abolition of slavery."

The lecture was printed in 1849 in *Æsthetic Papers*, edited by Miss Elizabeth P. Peabody.

Although the chronicles of the campaigns and acts of prowess of the masterly soldiers were always attractive reading to Mr. Emerson,—much more acts of patriotic devotion in the field,—and he was by no means committed as a non-resistant, he saw that

war had been a part of evolution, and that its evils might pave the way for good, as flowers spring up next year on a field of carnage. He knew that evolution required an almost divine patience, yet his good hope was strengthened by the signs of the times, and he desired to hasten the great upward step in civilization.

It is evident from his words and course of action during the outrages upon the peaceful settlers of Kansas, and when Sumter was fired upon and Washington threatened, that he recognized that the hour had not yet come. He subscribed lavishly from his limited means for the furnishing Sharp's rifles to the "Free State men." In the early days of the War of the Rebellion he visited Charlestown Navy-Yard to see the preparations, and said, "Ah! sometimes gunpowder smells good." In the opening of his address at Tufts College, in July, 1861, he said, "The brute noise of cannon has a most poetic echo in these days, as instrument of the primal sentiments of humanity." Several speeches included in this volume show that at that crisis his feeling was, as he had said of the forefathers' "deed of blood" at Concord Bridge,—

Even the serene Reason says
It was well done.

But all this was only a postponement of hope.

N2666: With regard to schooling a man's courage for whatever may befall, Mr. Emerson said: "Our culture therefore must not omit the arming of the man. Let him hear in season that he is born into the state of war, and that the commonwealth and his own well-being require that he should not go dancing in the weeds of peace, but warned, self-collected and neither defying nor dreading the thunder, let him take both reputation and life in his hand, and with

perfect urbanity dare the gibbet and the mob by the absolute truth of his speech and the rectitude of his behavior."—"Heroism," *Essays, First Series*.

"A state of war or anarchy, in which law has little force, is so far valuable that it puts every man on trial."—"The Conservative," *Nature, Addresses and Lectures*.

N2667: Mr. Emerson used to take pleasure in a story illustrating this common foible of mankind. A returned Arctic explorer, in a lecture, said, "In this wilderness among the ice-floes, I had the fortune to see a terrible conflict between two Polar bears—" "Which beat?" cried an excited voice from the audience.

N2668: In his description of the Tower of London in the journal of 1834, it appears that the suits of armor there set up affected Mr. Emerson unpleasantly, suggesting half-human destructive lobsters and crabs. It is, I believe, said that Benvenuto Cellini learned to make the cunning joints in armor for men from those of these marine warriors.

In the opening paragraphs of the essay on Inspiration Mr. Emerson congratulates himself that the doleful experiences of the aboriginal man were got through with long ago. "They combed his mane, they pared his nails, cut off his tail, set him on end, sent him to school and made him pay taxes, before he could begin to write his sad story for the compassion or the repudiation of his descendants, who are all but unanimous to disown him. We must take him as we find him," etc.

N2669: In *English Traits*, at the end of the chapter on Stonehenge, Mr. Emerson gave a humorous account of his setting forth the faith

or hope of the non-resistants and idealists in New England, to the amazed and shocked ears of Carlyle and Arthur Helps.

N2670: "As the solidest rocks are made up of invisible gases, as the world is made of thickened light and arrested electricity, so men know that ideas are the parents of men and things; there was never anything that did not proceed from a thought."—"The Scholar," *Lectures and Biographical Sketches*.

N2671: In "The Problem" he says of the Parthenon and England's abbeys that

out of Thought's interior sphere
These wonders rose to upper air.

N2672: Mr. Emerson in his conversation frankly showed that he was not yet quite prepared to be a non-resistant. He would have surely followed his own counsel where he says, "Go face the burglar in your own house," and he seemed to feel instinctive sympathy with what Mr. Dexter, the counsel, said in the speech which he used to read me from the Selfridge trial:—

"And may my arm drop powerless when it fails to defend my honor!"

He exactly stated his own position in a later passage, where he says that "in a given extreme event Nature and God will instruct him in that hour."

N2673: Thoreau lived frankly and fearlessly up to this standard.

N2674: This same view is even more attractively set forth in "Aristocracy" (*Lectures and Biographical Sketches*, pp. 36–40).

Rev. Dr. Cyrus A. Bartol, in an interesting paper on "Emerson's Religion,"¹²¹ gives, among other reminiscences, the following: "I asked him if he approved of war. 'Yes,' he said, 'in one born to fight.'"

¹²¹ *The Genius and Character of Emerson; Lectures at the Concord School of Philosophy*, edited by F. B. Sanborn. Boston: James R. Osgood & Co., 1885.

THE FUGITIVE SLAVE LAW, CONCORD, 1851

THE OPENING passages of this speech to his friends and neighbors show how deeply Mr. Emerson was moved. He could no longer be philosophical, as in the "Ode" inscribed to his friend William Channing, and in earlier addresses. The time had come when he might at any moment be summoned to help the marshal's men seize and return to bondage the poor fugitive who had almost reached the safety of England's protection. Such men were frequently passing through Concord, concealed and helped by the good Bigelow, the blacksmith, and his wife, the Thoreaus, Mrs. Brooks, and even once at a critical moment by her husband, the law-abiding "'Squire" himself.

Mr. Emerson instantly took his stand, and did not hesitate to run atilt against the dark giant, once so honored. The question of secession for conscience' sake had come up among the Abolitionists. Mr. Emerson had stood for Union, yet felt that there could be nothing but shame in Union until the humiliating statute was repealed. Meanwhile he fell back on the reserve-right of individual revolution as the duty of honest men. The Free-Soilers soon after renominated Dr. John Gorham Palfrey for a seat in

Congress, and in his campaign Mr. Emerson delivered this speech in several Middlesex towns. In Cambridge he was interrupted by young men from the college, Southerners, it was said, but it appears that the disturbance was quite as much due to "Northern men who were eager to keep up a show of fidelity to the interest of the South," as a Southern student said in a dignified disclaimer. Mr. Cabot in his Memoir gives an interesting account by Professor James B. Thayer of Mr. Emerson's calm ignoring of the rude and hostile demonstration.

Writing to Carlyle, in the end of July, 1857, Mr. Emerson said: "In the spring, the abomination of our Fugitive Slave Bill drove me to some writing and speech-making, without hope of effect, but to clear my own skirts."

This was the reaction which could not but be felt by him where he had been forced to descend into the dust and conflict of the arena from the serene heights. He wrote in his journal next year:—

"Philip Randolph [a valued friend] was surprised to find me speaking to the politics of anti-slavery in Philadelphia. I suppose because he thought me a believer in general laws and that it was a kind of distrust of my own general teachings to appear in active sympathy with these temporary heats. He is right so far as it is becoming in the scholar to insist on central soundness rather than on superficial applications. I am to give a wise and just ballot, though no man else in the republic doth. I am to demand the absolute right, affirm that, and do that; but not push Boston into a showy and theatrical attitude, endeavoring to persuade her she is more virtuous than she is. Thereby I am robbing myself more than I am enriching the public. After twenty, fifty, a hundred years, it will be quite easy to discriminate who stood for the right, and who for the expedient."

Yet however hard the duty of the hour might be, Mr. Emerson never failed in his duty as a good citizen to come to the front in dark days.

"In spite of all his gracefulness and reserve and love of the unbroken tranquillity of serene thought, he was by the right of heredity a belligerent in the cause of Freedom."

N2675: Shadrach was hurried to Concord after his rescue, and by curious coincidence Edwin Bigelow, the good village blacksmith who there harbored him and drove him to the New Hampshire line, was one of the jurors in the trial of another rescue case.

N2676: Mr. Emerson wrote in his journal, after Mr. Hoar's return:—

"The position of Massachusetts seems to me to be better for Mr. Hoar's visit to South Carolina in this point, that one illusion is dispelled. Massachusetts was dishonored before, but she was credulous in the protection of the Constitution, and either did not believe, or affected not to believe in that she was dishonored. Now all doubt on that subject is removed, and every Carolina boy will not fail to tell every Massachusetts boy whenever they meet how the fact stands. The Boston merchants would willingly salve the matter over, but they cannot hereafter receive Southern gentlemen at their tables without a consciousness of shame."

N2677: Apparently from Vattel, book i., ch. i., p. 79.

N2678:

But there was chaff within the flour,

And one was false in ten,
And reckless clerks in lust of power
Forgot the rights of men;
Cruel and blind did file their mind,
And sell the blood of human kind.

Your town is full of gentle names
By patriots once were watchwords made;
Those war-cry names are muffled shames
On recreant sons mislaid.
What slave shall dare a name to wear
Once Freedom's passport everywhere?

See note^{N2134} to poem "Boston."

Mr. Charles Francis Adams's *Life of Richard H. Dana* gives light on the phrase used in the first of these verses. The following passage is from Mr. Dana's journal during the trial of Anthony Burns, the fugitive:—

"Choate, I had an amusing interview with. I asked him to make one effort in favor of freedom, and told him that the 1850 delusion was dispelled and all men were coming round, the Board of Brokers and Board of Aldermen were talking treason, and that he must come and act. He said he should be glad to make an effort on our side, but that he had given written opinions against us in the Sims case on every point, and that he could not go against them.

"'You corrupted your mind in 1850.'

"'Yes. Filed my mind.'

"'I wish you would file it in court for our benefit.'"

Shakspeare said,—

"For Banquo's issue have I filed my mind."

N2679: Mr. F. B. Sanborn, in his *Life of Thoreau*, says that Webster gave, as a reason for not visiting Concord in his later years, that "Many of those whom I so highly esteemed in your beautiful and quiet village have become a good deal estranged, to my great grief, by abolitionism, free-soilism, transcendentalism and other notions which I cannot but regard as so many vagaries of the imagination."

N2680:

Or who, with accent bolder,
Dare praise the freedom-loving mountaineer?
I found by thee, O rushing Contoocook!
And in thy valleys, Agiochook!
The jackals of the negro-holder.

.

Virtue palters; Right is hence;
Freedom praised, but hid;
Funeral eloquence
Rattles the coffin-lid.

Poems, "Ode," inscribed to W. H. Channing.

See also what is said of "the treachery of scholars" in the last pages of "The Man of Letters," *Lectures and Biographical Sketches*.

N2681: This appeal for a general movement in the free states to free the slaves and to recompense the planters, unhappily brought up to the institution, for their loss, was so much better in an anti-slavery address in New York, in 1855, than in the Concord

speech four years earlier, that I have substituted the later version here. In Mr. Cabot's Memoir, pp. 558–593, a portion of the New York speech, including this paragraph, is given.

THE FUGITIVE SLAVE LAW, NEW YORK, 1854

WRITING TO his friend Carlyle on March 11, 1854, Mr. Emerson said:—

"One good word closed your letter in September...namely, that you might come westward when Frederic was disposed of. Speed Frederic, then, for all reasons and for this! America is growing furiously, town and state; new Kansas, new Nebraska looming up in these days, vicious politicians seething a wretched destiny for them already at Washington. The politicians shall be sodden, the States escape, please God! The fight of slave and freeman drawing nearer, the question is sharply, whether slavery or whether freedom shall be abolished. Come and see."

Four days before thus writing, he had given this address, to a fairly large audience, in the "Tabernacle" in New York City, for, however dark the horizon looked, the very success of the slave power was working its ruin. Encouraged by the submission of the North to the passage of the evil law to pacify them, they had resolved to repeal the Missouri Compromise, which confined slavery to a certain latitude. It was repealed within a few days of the

time Mr. Emerson made this address. During the debate, Charles Sumner said to Douglas, "Sir, the bill you are about to pass is at once the worst and the best on which Congress has ever acted.... It is the worst bill because it is a present victory for slavery.... Sir, it is the best bill on which Congress has ever acted, *for it annuls all past compromises with slavery and makes any future compromises impossible*. Thus it puts Freedom and Slavery face to face and bids them grapple. Who can doubt the result?" The rendition to slavery of Anthony Burns from Boston in May wrought a great change in public feeling there. Even the commercial element in the North felt the shame.

Though not a worker in the anti-slavery organization, Mr. Emerson had always been the outspoken friend of freedom for the negroes. Witness his tribute in 1837 to Elijah Lovejoy, the martyr in their cause (see "Heroism," *Essays, First Series*, p. 262, and note^{N0370}). But the narrow and uncharitable speech and demeanor of many "philanthropists" led him to such reproofs as the one quoted by Dr. Bartol, "Let them first be anthropic," or that in "Self-Reliance" to the angry bigot: "Go love thy infant; love thy wood-chopper; be good-natured and modest; have that grace; and never varnish your hard, uncharitable ambition with this incredible tenderness for black folk a thousand miles off."

But now the foe was at the very gate. The duty to resist was instant and commanding. Mr. Emerson wrote in his journal, soon after:—

"Why do we not say, We are abolitionists of the most absolute abolition, as every man that is a man must be?... We do not try to alter your laws in Alabama, nor yours in Japan, or in the Feejee Islands; but we do not admit them, or permit a trace of them here. Nor shall we suffer you to carry your Thuggism, north, south, east or west into a single rod of territory which

we control. We intend to set and keep a *cordon sanitaire* all around the infected district, and by no means suffer the pestilence to spread.

"It is impossible to be a gentleman, and not be an abolitionist, for a gentleman is one who is fulfilled with all nobleness, and imparts it; is the natural defender and raiser of the weak and oppressed."

With Mr. Emerson's indignation at Webster's fall was mingled great sorrow. From his youth he had admired and revered him. The verses about him printed in the Appendix to the *Poems* show the change of feeling. He used to quote Browning's "Lost Leader" as applying to him, and admired Whittier's fine poem "Ichabod" ("The glory is departed," I. Samuel, iv., 21, 22) on his apostasy.

Mr. Emerson's faithfulness to his sense of duty, leading him, against his native instincts, into the turmoil of politics, striving to undo the mischief that a leader once revered had wrought in the minds of Americans, is shown in the extract from his journal with regard to this lecture:—

"At New York Tabernacle, on the 7th March, I saw the great audience with dismay, and told the bragging secretary that I was most thankful to those that staid at home; every auditor was a new affliction, and if all had staid away, by rain or preoccupation, I had been best pleased."

N2682: In *Lectures and Biographical Sketches*, in the essay on Aristocracy, and also in that on The Man of Letters, the duty of loyalty to his thought and his order is urged as a trait of the gentleman and the scholar, and in the latter essay, the scholar's duty to stand for what is generous and free.

N2683: Mr. Emerson in his early youth did come near slavery for a short time. His diary at St. Augustine, quoted by Mr. Cabot

in his Memoir, mentions that, while he was attending a meeting of the Bible Society, a slave-auction was going on outside, but it does not appear that he actually saw it.

N2684: Carlyle described Webster as "a magnificent specimen....As a Logic-fencer, Advocate, or Parliamentary Hercules, one would incline to back him at first sight against all the extant world. The tanned complexion, that amorphous, crag-like face, the dull black eyes under their precipice of brows, like dull anthracite furnaces needing only to be blown, the mastiff-mouth, accurately closed:—I have not traced as much of *silent Berserkir-rage*, that I remember of, in any other man."¹²²

N2685: Mr. James S. Gibbons (of the *New York Tribune*) in a letter written to his son two days after this speech was delivered, says, referring evidently to this passage:—

"Emerson gave us a fine lecture on Webster. He made him stand before us in the proportions of a giant; and then with one word crushed him to powder."

N2686: Professor John H. Wright of Harvard University has kindly furnished me with the passage from Dio Cassius, xlvii. 49, where it is said of Brutus:—

Καὶ ἀναβοήσας τοῦτο δὴ Ἡράκλειον
 ὦ τλήμον ἀρετῇ, λόγος ἄρ' ἦσθ', ἐγὼ δέ σε
 ὡς ἔργον ἤσκουν· σὺ δ' ἄρ' ἐδούλευες τύχη,—
 παρακάλεσέ τινα τῶν συνόντων, ἵν' αὐτὸν ἀποκτείνῃ,—

¹²² *Correspondence of Carlyle and Emerson*, vol. i., pp. 260, 261.

which he renders, "He cried out this sentiment of Heracles, 'O wretched Virtue, after all, thou art a name, but I cherished thee as a fact. Fortune's slave wast thou;' and called upon one of those with him to slay him."

Professor Wright adds that Theodorus Prodromus, a Byzantine poet of the twelfth century, said, "What Brutus says (O Virtue, etc.) I pronounce to be ignoble and unworthy of Brutus's soul." It seems very doubtful whence the Greek verses came.

N2687: Just ten years earlier, Hon. Samuel Hoar, the Commissioner of Massachusetts, sent to Charleston, South Carolina, in the interests of our colored citizens there constantly imprisoned and ill used, had been expelled from that state with a show of force. See *Lectures and Biographical Sketches*.

N2688: The sending back of Onesimus by Paul was a precedent precious in the eyes of pro-slavery preachers, North and South, in those days, ignoring, however, Paul's message, "Not now as a servant, but above a servant, a brother beloved, specially to me, but how much more unto thee, both in the flesh and in the Lord. If thou count me therefore a partner, receive him as myself."¹²³

N2689: The hydrostatic paradox has been before alluded to as one of Mr. Emerson's favorite symbols, the balancing of the ocean by a few drops of water. In many places he dwells on the power of minorities—a minority of one. In "Character" (*Lectures and Biographical Sketches*) he says, "There was a time when Christianity existed in one child." For the value and duty of minorities, see *Conduct of Life*, pp. 249ff., *Letters and Social Aims*, pp. 219, 220.

¹²³ Epistle of Paul to Philemon, i. 16, 17.

N2690: This was a saying of Mahomet. What follows, with regard to the divine sentiments always soliciting us, is thus rendered in "My Garden:"

Ever the words of the gods resound;
But the porches of man's ear
Seldom in this low life's round
Are unsealed, that he may hear.

N2691: This is the important key to the essay on Self-Reliance.

N2692: In the "Sovereignty of Ethics" Mr. Emerson quotes an Oriental poet describing the Golden Age as saying that God had made justice so dear to the heart of Nature that, if any injustice lurked anywhere under the sky, the blue vault would shrivel to a snake-skin, and cast it out by spasms.

N2693: There seems to be some break in the construction here probably due to the imperfect adjustment of lecture-sheets. It would seem that the passage should read: "Liberty is never cheap. It is made difficult because freedom is the accomplishment and perfectness of man—the finished man; earning and bestowing good;" etc.

N2694: See *Lectures and Biographical Sketches*, pp. 246 and 251.

N2695: The occasion alluded to was Hon. Robert C. Winthrop's speech to the alumni of Harvard College on Commencement Day in 1852. What follows is not an abstract, but Mr. Emerson's rendering of the spirit of his address.

THE ASSAULT UPON MR. SUMNER

ONE EVENING in May, Judge Hoar came to Mr. Emerson's house, evidently deeply stirred, and told in a few words the startling news that the great Senator from Massachusetts had been struck down at his desk by a Representative from South Carolina, and was dangerously hurt. The news was heard with indignant grief in Concord, and a public meeting was held four days later in which Mr. Emerson and others gave vent to this feeling.

Among Mr. Emerson's papers are the fragmentary notes on Sumner, given below, without indication as to when they were used.

CHARLES SUMNER

Clean, self-poised, great-hearted man, noble in person, incorruptible in life, the friend of the poor, the champion of the oppressed.

Of course Congress must draw from every part of the country swarms of individuals eager only for private interests, who could not love his stern justice. But if they gave him no high employment,

he made low work high by the dignity of honesty and truth. But men cannot long do without faculty and perseverance, and he rose, step by step, to the mastery of all affairs intrusted to him, and by those lights and upliftings with which the spirit that makes the Universe rewards labor and brave truth. He became learned, and adequate to the highest questions, and the counsellor of every correction of old errors, and of every noble reform. How nobly he bore himself in disastrous times. Every reform he led or assisted. In the shock of the war his patriotism never failed. A man of varied learning and accomplishments.

He held that every man is to be judged by the horizon of his mind, and Fame he defined as the shadow of excellence, but that which follows him, not which he follows after.

Tragic character, like Algernon Sydney, man of conscience and courage, but without humor. Fear did not exist for him. In his mind the American idea is no crab, but a man incessantly advancing, as the shadow of the dial or the heavenly body that casts it. The American idea is emancipation, to abolish kingcraft, feudalism, black-letter monopoly, it pulls down the gallows, explodes priestcraft, opens the doors of the sea to all emigrants, extemporizes government in new country.

Sumner has been collecting his works. They will be the history of the Republic for the last twenty-five years, as told by a brave, perfectly honest and well instructed man, with social culture and relation to all eminent persons. Diligent and able workman, with rare ability, without genius, without humor, but with persevering study, wide reading, excellent memory, high stand of honor (and pure devotion to his country), disdaining any bribe, any compliances, and incapable of falsehood. His singular advantages of person, of manners, and a statesman's conversation impress every one favorably. He has the foible of most public men, the

egotism which seems almost unavoidable at Washington. I sat in his room once at Washington whilst he wrote a weary procession of letters,—he writing without pause as fast as if he were copying. He outshines all his mates in historical conversation, and is so public in his regards that he cannot be relied on to push an office-seeker, so that he is no favorite with politicians. But wherever I have met with a dear lover of the country and its moral interests, he is sure to be a supporter of Sumner.

It characterizes a man for me that he hates Charles Sumner: for it shows that he cannot discriminate between a foible and a vice. Sumner's moral instinct and character are so exceptionally pure that he must have perpetual magnetism for honest men; his ability and working energy such, that every good friend of the Republic must stand by him. Those who come near him and are offended by his egotism, or his foible (if you please) of using classic quotations, or other bad tastes, easily forgive these whims, if themselves are good, or magnify them into disgust, if they themselves are incapable of his virtue.

And when he read one night in Concord a lecture on Lafayette we felt that of all Americans he was best entitled by his own character and fortunes to read that eulogy.

Every Pericles must have his Cleon: Sumner had his adversaries, his wasps and back-biters. We almost wished that he had not stooped to answer them. But he condescended to give them truth and patriotism, without asking whether they could appreciate the instruction or not.

A man of such truth that he can be truly described: he needs no exaggerated praise. Not a man of extraordinary genius, but a man of great heart, of a perpetual youth, with the highest sense of honor, incapable of any fraud, little or large; loving his friend and loving his country, with perfect steadiness to his purpose,

shunning no labor that his aim required, and his works justified him by their scope and thoroughness.

He had good masters, who quickly found that they had a good scholar. He read law with Judge Story, who was at the head of the Law School at Harvard University, and who speedily discovered the value of his pupil, and called him to his assistance in the Law School. He had a great talent for labor, and spared no time and no research to make himself master of his subject. His treatment of every question was faithful and exhaustive, and marked always by the noble sentiment.

N2696: With this message of comfort to Sumner, struck down for his defence of Liberty, may be contrasted what is said of Webster when he abandoned her cause:—

"Those to whom his name was once dear and honored, as the manly statesman to whom the choicest gifts of Nature had been accorded, disown him: . . . he who was their pride in the woods and mountains of New England is now their mortification,—they have torn his picture from the wall, they have thrust his speeches into the chimney," etc.—"Address on the Fugitive Slave Law," at Concord, 1851.

SPEECH ON AFFAIRS IN KANSAS

BY AN act of Congress, passed in May, 1854, the territories of Kansas and Nebraska were organized, and in a section of that act it was declared that the Constitution and all the laws of the United States should be in force in these territories, except the Missouri Compromise Act of 1820, which was declared inoperative and void. The act thereby repealed had confined slavery to the region of the Louisiana Purchase south of latitude 36°, 30' North. Foreseeing the probable success of this measure to increase the area of slavery, Emigrant Aid Societies had been formed in Massachusetts first, and later, in Connecticut, which assisted Northern emigrants to the settlement of this fertile region. Settlers from the Northwestern States also poured in, and also from Missouri, the latter bringing slaves with them. A fierce struggle, lasting for some years and attended with bloodshed and barbarities, began at once, hordes of armed men from the border state of Missouri constantly voting at Kansas elections and intimidating the free state settlers, and even driving parties of immigrants out of the state. Franklin Pierce was then President, and threw the influence and power of the administration on the

side of the pro-slavery party in Kansas. Despairing of redress from Washington, the settlers from the free states appealed in their distress to their friends at home, and sent Mr. Whitman, Rev. Mr. Nute, and later, John Brown, to make known to them their wrongs, and ask moral and material aid, especially arms to defend their rights, and reinforcements of brave settlers. Meetings were held, not only in the cities, but in the country towns, and, certainly in the latter, were well attended by earnest people who gave, a few from their wealth, but many from their poverty, large sums to help "bleeding Kansas." In response to the petitions of the friends of Freedom, who urged the Legislature of Massachusetts to come to the rescue, a joint committee was appointed by the General Court to consider the petitions for a state appropriation of ten thousand dollars to protect the interests of the North and the rights of her citizens in Kansas, should they be again invaded by Southern marauders. John Brown addressed this committee in February, 1856. He made a clear and startling statement of the outrages he had witnessed and the brave struggles of the settlers, and told of the murder and imprisonment and maltreatment of his sons, seven of whom were in Kansas with him during the struggle.¹²⁴

Mr. Emerson always attended the meetings in aid of Kansas in Concord, gave liberally to the cause, and spoke there and elsewhere when called upon.

N2697: George Bancroft, the historian, said of the conclusion of this speech:—

"Emerson as clearly as any one, perhaps more clearly than any one at the time, saw the enormous dangers that were gathering over the

¹²⁴ See the report of this speech in Redpath's *Life of Captain John Brown*. Boston: Thayer & Eldridge, 1860.

Constitution....It would certainly be difficult, perhaps impossible, to find any speech made in the same year that is marked with so much courage and foresight as this of Emerson....Even after the inauguration of Lincoln several months passed away before his Secretary of State or he himself saw the future so clearly as Emerson had foreshadowed it in 1856."¹²⁵

¹²⁵ "Review of Holmes's Life of Emerson," *North American Review* February, 1885.

JOHN BROWN: SPEECH AT BOSTON

MR. F. B. Sanborn, in his *Familiar Letters of Thoreau*, says that he introduced John Brown to Thoreau in March, 1857, and Thoreau introduced him to Emerson. This was at the time when Brown came on to awaken the people of Massachusetts to the outrages which the settlers and their families were suffering, and procure aid for them. His clear-cut face, smooth-shaven and bronzed, his firmly shut mouth and mild but steady blue eyes, gave him the appearance of the best type of old New England farmers; indeed he might well have passed for a rustic brother of Squire Hoar. Mr. Emerson was at once interested in him and the story of the gallant fight that the Free-State men in Kansas were making, though Brown was very modest about his own part and leadership. Indeed he claimed only to be a fellow worker and adviser. I think that soon after this time, on one of his visits to Concord, he stayed at Mr. Emerson's house; certainly he spent the evening there. The last time he came to Concord he was a changed man; all the pleasant look was gone. His gray hair, longer and brushed upright, his great gray beard and the sharpening of his features by exposure and rude experiences gave him a wild, fierce expression.

His speech in the Town Hall was excited, and when he drew a huge sheath-knife from under his coat and showed it as a symbol of Missouri civilization, and last drew from his bosom a horse-chain and clanked it in air, telling that his son had been bound with this and led bareheaded under a burning sun beside their horses, by United States dragoons, and in the mania brought on by this inhuman treatment had worn the rusty chain bright,—the old man recalled the fierce Balfour of Burley in Scott's *Old Mortality*. It was a startling sight and sent a thrill through his hearers. Yet on earlier occasions his speech had been really more effective, when a quiet farmer of mature years, evidently self-contained, intelligent, truthful and humane, simply told in New England towns what was going on in Kansas, the outrages committed upon the settlers, the violation of their elementary rights under the Constitution,—and all this connived at by the general government. He opened the eyes of his hearers, even against their wills, to the alarming pass into which the slave power had brought the affairs of the country.

But now wrong and outrage, not only on others but terribly suffered in his own family, had made Brown feel that not he but "Slavery was an outlaw" against which he "held a commission direct from God Almighty" to act. A friend quoted him as having said, "The loss of my family and the troubles in Kansas have shattered my constitution, and I am nothing to the world but to defend the right, and that, by God's help, I have done and will do."

The people were not ready to follow him in revolutionary measures, but when on his own responsibility he had precipitated the inevitable conflict by breaking with a government, then so unrighteous, and offered his life as a sacrifice for humanity, they could not but do homage to him as a hero, who was technically a traitor. He had cut the Gordian knot which they had suffered to be tied tighter.

Of course Mr. Emerson had known nothing of John Brown's plan for a raid into the slave states. It was the motive and courage he honored, not the means. He wrote: "I wish we should have health enough to know virtue when we see it, and not cry with the fools and the newspapers, 'Madman!' when a hero passes."

On the first day of November, John Brown had been sentenced to death. This meeting in Boston, to give aid to his family, was held on the eighteenth, just two weeks before his execution.

The verses which serve as motto are from Mr. Edmund Clarence Stedman's poem written at the time, which Mr. Emerson used to read aloud to his family and friends with much pleasure.

N2698: "This court acknowledges, I suppose, the validity of the Law of God. I see a book kissed here which I suppose to be the Bible, or, at least, the New Testament. That teaches me that all things 'whatsoever I would that men should do unto me, I should do even so to them.' It teaches me further to 'remember them which are in bonds as bound with them.' I endeavored to act up to that instruction. I say I am yet too young to understand that God is any respecter of persons. I believe that to have interfered as I have done, as I have always freely admitted that I have done, in behalf of His despised poor, was not wrong, but right. Now, if it is deemed necessary that I should forfeit my life for the furtherance of the ends of justice, and mingle my blood further with the blood of my children, and with the blood of millions in this slave country whose rights are disregarded by wicked, cruel and unjust enactments—I submit: so let it be done." From the Speech of John Brown to the Court.

N2699: Among the sheets of the lecture "Courage" is one which seems to have been used at that time:—

"Governor Wise and Mr. Mason no doubt have some right to their places. It is some superiority of working brain that put them there, and the aristocrats in every society. But when they come to deal with Brown, they find that he speaks their own speech,—has whatever courage and directness they have, and a great deal more of the same; so that they feel themselves timorous little fellows in his hand; he outsees, out-thinks, outacts them, and they are forced to shuffle and stammer in their turn.

"They painfully feel this, that he is their governor and superior, and the only alternative is to kneel to him if they are truly noble, or else (if they wish to keep their places), to put this fact which they know, out of sight of other people, as fast as they can. Quick, drums and trumpets strike up! Quick, judges and juries, silence him, by sentence and execution of sentence, and hide in the ground this alarming fact. For, if everything comes to its right place, he goes up, and we down."

N2700: Commodore Hiram Paulding, in 1857, had broken up Walker's filibustering expedition at Nicaragua. The arrest of Walker on foreign soil the government did not think it wise wholly to approve.

N2701: The allusion is to the trials of the fugitives Shadrach, Sims and Burns in Boston. The story of these humiliations is told in full and in a most interesting manner in the diary of Richard H. Dana,¹²⁶ whose zeal in the cause of these poor men did him great honor.

During the trial of Sims, a chain was put up, as a barrier against the crowd, around the United States Court-House, and the stooping of the judges to creep under this chain in order to enter

¹²⁶ *Richard Henry Dana; a Biography.* By Charles Francis Adams. Houghton, Mifflin & Co., 1890. In chapter viii. of this book is a very remarkable account of John Brown and his family at their home at North Elba in 1849, when Mr. Dana and a friend, lost in the Adirondac woods, chanced to come out upon the Brown clearing and were kindly received and aided.

the court-house was considered symbolic of their abject attitude towards the aggressive slave power.

JOHN BROWN: SPEECH AT SALEM

THE SECOND of December, on which day John Brown was executed at Charlestown, Virginia, was bright in that State, but in New England was of a strange sultriness with a wind from the south and a lowering sky. At noon, the hour appointed for his death, in Concord (as in many New England towns) the men and women who honored his character and motives gathered and made solemn observance of a day and event which seemed laden with omens. There was a prayer, I think offered by the Rev. Edmund Sears of Wayland,¹²⁷ Mr. Emerson read William Allingham's beautiful poem "The Touchstone" which is used as the motto to this speech, Thoreau read with said bitterness Sir Walter Raleigh's "The Soule's Errand." Hon. John S. Keyes read some appropriate verses from Aytoun's "Execution of Montrose" and Mr. Sanborn a poem which he had written for the occasion.

¹²⁷ While waiting for the services to begin, Mr. Sears wrote some verses. The following lines, which Mrs. Emerson saw him write, were a prophecy literally fulfilled within three years by the Union armies singing the John Brown song:—

"But not a pit six feet by two
Can hold a man like thee;
John Brown shall tramp the shaking earth
From Blue Ridge to the sea."

N2702: Here, as often in Mr. Emerson's speech and writing, is shown his respect for the old religion of New England and its effect on the thought and character of her people. As Lowell said of them in his Concord Ode in 1875:—

"And yet the enduring half they chose,
Whose choice decides a man life's slave or king,
The invisible things of God before the seen and known."

N2703: I well remember the evening, in my school-boy days, when John Brown, in my father's house, told of his experiences as a sheep-farmer, and his eye for animals and power over them. He said he knew at once a strange sheep in his flock of many hundred, and that he could always make a dog or cat so uncomfortable as to wish to leave the room, simply by fixing his eyes on it.

N2704: "Heroism feels and never reasons, and therefore is always right; and although a different breeding, different religion and greater intellectual activity would have modified or even reversed the particular action, yet, for the hero, that thing he does is the highest deed, and is not open to the censure of philosophers and divines."—"Heroism," *Essays, First Series*.

"I can leave to God the time and means of my death, for I believe now that the sealing of my testimony before God and man with my blood will do far more to further the cause to which I have earnestly devoted myself than anything else I have done in my life."—Letter of John Brown to a friend.

THEODORE PARKER

THEODORE PARKER, worn by his great work in defence of liberal religion and in every cause of suffering humanity, had succumbed to disease and died in Florence in May, 1860, not quite fifty years of age. Born in the neighbor town of Lexington when Emerson was seven years old, they had been friends probably from the time when the latter, soon after settling in Concord, preached for the society at East Lexington, from 1836 for two years. Parker was, during this period, studying divinity, and was settled as pastor of the West Roxbury church in 1837. In that year he is mentioned by Mr. Alcott as a member of the Transcendental Club and attending its meetings in Boston. When, in June, 1838, Mr. Emerson fluttered the conservative and the timid by his Divinity School Address, the young Parker went home and wrote, "It was the most inspiring strain I ever listened to....My soul is roused, and this week I shall write the long-meditated sermons on the state of the church and the duties of these times."

Mr. Parker was one of those who attended the gathering in Boston which gave birth to the *Dial*, to which he was a strong contributor. Three years after its death, he, with the help of Mr.

James Elliot Cabot and Mr. Emerson, founded the *Massachusetts Quarterly Review*, vigorous though short-lived, of which he was the editor. Parker frequently visited Emerson, and the two, unlike in their method, worked best apart in the same great causes. Rev. William Gannett says, "What Emerson uttered without plot or plan, Theodore Parker elaborated to a system. Parker was the Paul of transcendentalism."

Mr. Edwin D. Mead, in his chapter on Emerson and Theodore Parker,¹²⁸ gives the following pleasant anecdote:—

"At one of Emerson's lectures in Boston, when the storm against Parker was fiercest, a lecture at which a score of the religious and literary leaders of the city were present, Emerson, as he laid his manuscript upon the desk and looked over the audience, after his wont, observed Parker; and immediately he stepped from the platform to the seat near the front where Parker sat, grasping his hand and standing for a moment's conversation with him. It was not ostentation, and it was not patronage: it was admiring friendship,—and that fortification and stimulus Parker in those times never failed to feel. It was Emerson who fed his lamp, he said; and Emerson said that, be the lamp fed as it might, it was Parker whom the time to come would have to thank for finding the light burning."

Parker dedicated to Emerson his *Ten Sermons on Religion*. In acknowledging this tribute, Mr. Emerson thus paid tribute to Parker's brave service:—

"We shall all thank the right soldier whom God gave strength to fight for him the battle of the day."

¹²⁸ In the very interesting work *The Influence of Emerson*, published in Boston in 1903, by the American Unitarian Association.

When Mr. Parker's failing forces made it necessary for him to drop his arduous work and go abroad for rest, Mr. Emerson was frequently called to take his place in the Music Hall on Sundays. I think that this was the only pulpit he went into to conduct Sunday services after 1838.

It is told that Parker, sitting, on Sunday morning, on the deck of the vessel that was bearing him away, never to return, smiled and said: "Emerson is preaching at Music Hall to-day."

N2705: Mr. Emerson wrote in his journal:—

"The Duc de Brancas said, 'Why need I read the *Encyclopédie*? Rivarol visits me.' I may well say it of Theodore Parker."

N2706: Richard H. Dana wrote in his diary, November 3, 1852:—

"It is now ten days since Webster's death....Strange that the best commendation that has appeared yet, the most touching, elevated, meaning eulogy, with all its censure, should have come from Theodore Parker! Were I Daniel Webster, I would not have that sermon destroyed for all that had been said in my favor as yet."

N2707: I copy from Mr. Emerson's journal at the time of Mr. Parker's death these sentences which precede some of those included in this address:—

"Theodore Parker has filled up all his years and days and hours. A son of the energy of New England; restless, eager, manly, brave, early old, contumacious, clever. I can well praise him at a spectator's distance, for our minds and methods were unlike,—few people more unlike. All the virtues are solitaires. Each man is related to persons who are not related to each

other, and I saw with pleasure that men whom I could not approach, were drawn through him to the admiration of that which I admire."

AMERICAN CIVILIZATION

ON JANUARY 31, 1862, Mr. Emerson lectured at the Smithsonian Institution in Washington on American Civilization. Just after the outbreak of war in the April preceding, he had given a lecture, in a course in Boston on Life and Literature, which he called "Civilization at a Pinch," the title suggesting how it had been modified by the crisis which had suddenly come to pass. In the course of the year the flocking of slaves to the Union camps, and the opening vista of a long and bitter struggle, with slavery now acknowledged as its root, had brought the question of Emancipation as a war-measure to the front. Of course Mr. Emerson saw hope in this situation of affairs, and when he went to Washington with the chance of being heard by men in power there, he prepared himself to urge the measure, as well on grounds of policy as of right. So the Boston lecture was much expanded to deal with the need of the hour. There is no evidence that President Lincoln heard it; it is probable that he did not; nor is it true that Mr. Emerson had a long and earnest conversation with him on the subject next day, both of which assertions have been made in print. Mr. Emerson made an unusual record in his journal of the incidents

of his stay in Washington, and though he tells of his introduction to Mr. Lincoln and a short chat with him, evidently there was little opportunity for serious conversation. The President's secretaries had, in 1886, no memory of his having attended the lecture, and the Washington papers do not mention his presence there. The following notice of the lecture, however, appeared in one of the local papers: "The audience received it, as they have the other anti-slavery lectures of the course, with unbounded enthusiasm. It was in many respects a wonderful lecture, and those who have often heard Mr. Emerson said that he seemed inspired through nearly the whole of it, especially the part referring to slavery and the war."

A gentleman in Washington, who took the trouble to look up the question as to whether Mr. Lincoln and other high officials heard it, says that Mr. Lincoln could hardly have attended lectures then:—

"He was very busy at the time, Stanton the new war secretary having just come in, and storming like a fury at the business of his department. The great operations of the war for the time overshadowed all the other events....It is worth remarking that Mr. Emerson in this lecture clearly foreshadowed the policy of Emancipation some six or eight months in advance of Mr. Lincoln. He saw the logic of events leading up to a crisis in our affairs, to 'emancipation as a platform with compensation to the loyal owners' (his words as reported in the *Star*). The notice states that the lecture was very fully attended."

Very possibly it may be with regard to this address that we have the interesting account given of the effect of Mr. Emerson's speaking on a well-known English author. Dr. Garnett, in his *Life of Emerson*, says:—

"A shrewd judge, Anthony Trollope, was particularly struck with the note of sincerity in Emerson when he heard him address a large meeting during the Civil War. Not only was the speaker terse, perspicuous, and practical to a degree amazing to Mr. Trollope's preconceived notions, but he commanded his hearers' respect by the frankness of his dealing with them. 'You make much of the American eagle,' he said, 'you do well. But beware of the American peacock.' When shortly afterwards Mr. Trollope heard the consummate rhetorician, ——— ——— he discerned at once that oratory was an end with him, instead of, as with Emerson, a means. He was neither bold nor honest, as Emerson had been, and the people knew that while pretending to lead them he was led by them."

Mr. Emerson revised the lecture and printed it in the *Atlantic Monthly* for April, 1862. It was afterwards separated into the essay "Civilization," treating of the general and permanent aspects of the subject (printed in *Society and Solitude*), and this urgent appeal for the instant need.

The few lines inspired by the Flag are from one of the verse-books.

N2708: Mr. Emerson himself was by no means free from pecuniary anxieties and cares in those days.

Journal, 1862. "Poverty, sickness, a lawsuit, even bad, dark weather, spoil a great many days of the scholar's year, hinder him of the frolic freedom necessary to spontaneous flow of thought."

N2709: This was during the days of apparent inaction when, after the first reverses or minor successes of the raw Northern armies, the magnitude of the task before them and the energy of their opponents was realized, and recruiting, fortification, organization was going on in earnest in preparation for the spring

campaign. General Scott had resigned; General McClellan was doing his admirable work of creating a fit army, and Secretary Cameron had been succeeded by the energetic and impatient Stanton. But the government was still very shy of meddling with slavery for fear of disaffecting the War Democrats and especially the Border States.

N2710: A short time before this address was delivered Mr. Moncure D. Conway (a young Virginian, who, for conscience' sake, had left his charge as a Methodist preacher and had abandoned his inheritance in slaves, losing in so doing the good will of his parents, and become a Unitarian minister and an abolitionist) had read in Concord an admirable and eloquent lecture called "The Rejected Stone." This stone, slighted by the founders, although they knew it to be a source of danger, had now "become the head of the corner," and its continuance in the national structure threatened its stability. Mr. Emerson had been much struck with the excellence and cogency of Mr. Conway's arguments, based on his knowledge of Southern economics and character, and in this lecture made free use of them.

N2711: Mason and Slidell, the emissaries sent by the Confederacy to excite sympathy in its cause in Europe, had been taken off an English vessel at the Bermudas by Commodore Wilkes, and were confined in Fort Warren in Boston Harbor. President Lincoln's action in surrendering them at England's demand had been a surprise to the country, but was well received.

N2712: From the Veeshnoo Sarma.

N2713: See in the address on Theodore Parker the passage commending him for insisting "that the essence of Christianity is its practical morals; it is there for use or nothing," etc.

N2714: In the agitation concerning the abolition of slavery in the British colonies, gradual emancipation was at first planned, as more reasonable and politic, but, in the end, not only the reformers but the planters came in most cases to see that immediate emancipation was wiser.

THE EMANCIPATION PROCLAMATION

ON THE 22d of September, President Lincoln at last spoke the word so long earnestly desired by the friends of Freedom and the victims of slavery, abolishing slavery on the first day of the coming year in those states which should then be in rebellion against the United States.

At a meeting held in Boston in honor of this auspicious utterance, Mr. Emerson spoke, with others.

The address was printed in its present form in the *Atlantic Monthly* for November, 1862.

N2715: It may be interesting in this connection to recall the quiet joy with which Mr. Emerson in his poem "The Adirondacs" celebrates man's victory over matter, and its promise to human brotherhood, when the Atlantic Cable was supposed to be a success in 1858.

N2716: Milton, "Comus."

N2717: It is pleasant to contrast this passage with the tone of sad humiliation which prevails in the address on the Fugitive Slave Law given in Concord in 1851.

N2718: See the insulting recognition of this disgraceful attitude of the North by John Randolph, quoted by Mr. Emerson in his speech on the Fugitive Slave Law in Concord in 1851.

N2719: Shakspeare, Sonnet cvii.

N2720: The tragedy of the negro is tenderly told in the poem "Voluntaries," which was written just after they had gallantly stood the test of battle in the desperate attack on Fort Wagner.

On the first day of the year 1863, when Emancipation became a fact throughout the United States, a joyful meeting was held in Boston, and there Mr. Emerson read his "Boston Hymn."

ABRAHAM LINCOLN

IN THE year 1865, the people of Concord gathered on the Nineteenth of April, as had been their wont for ninety years, but this time not to celebrate the grasping by the town of its great opportunity for freedom and fame. The people came together in the old meeting-house to mourn for their wise and good Chief Magistrate, murdered when he had triumphantly finished the great work which fell to his lot. Mr. Emerson, with others of his townsmen, spoke.

N2721: On the occasion of his visit to Washington in January, 1862, Mr. Emerson had been taken to the White House by Mr. Sumner and introduced to the President. Mr. Lincoln's first remark was, "Mr. Emerson, I once heard you say in a lecture that a Kentuckian seems to say by his air and manners, 'Here am I; if you don't like me, the worse for you.'"

The interview with Mr. Lincoln was necessarily short, but he left an agreeable impression on Mr. Emerson's mind. The full account of this visit is printed in the *Atlantic Monthly* for July, 1904, and will

be included among the selections from the journals which will be later published.

N2722: Mr. Emerson's poem, "The Visit," shows how terrible the devastation of the day of a public man would have seemed to him.

N2723: The brave retraction by Thomas Taylor of the hostile ridicule which *Punch* had poured on Lincoln in earlier days contained these verses:—

"Beside this corpse, that bears for winding-sheet
The Stars and Stripes he lived to rear anew,
Between the mourners at his head and feet,
Say, scurrile jester, is there room for *you*?

"Yes, he had lived to shame me from my sneer,
To lame my pencil, and confute my pen;—
To make me own this hind of princes peer,
This rail-splitter a true-born king of men."

The whole poem is included in Mr. Emerson's collection *Parnassus*.

N2724: This thought is rendered more fully in the poem "Spiritual Laws," and in the lines in "Worship,"—

This is he men miscall Fate,
Threading dark ways, arriving late,
But ever coming in time to crown
The truth, and hurl wrong-doers down.

N2725: The following letter was written by Mr. Emerson in November, 1863, to his friend, Mr. George P. Bradford, who, as Mr. Cabot says, came nearer to being a "crony" than any of the others:—

Concord.

DEAR GEORGE,—I hope you do not need to be reminded that we rely on you at 2 o'clock on Thanksgiving Day. Bring all the climate and all the memories of Newport with you. Mr. Lincoln in fixing this day has in some sort bound himself to furnish good news and victories for it. If not, we must comfort each other with the good which already is, and with that which must be.

Yours affectionately,
R. W. EMERSON.

A year later, he wrote to the same friend:—

"I give you joy of the Election. Seldom in history was so much staked on a popular vote—I suppose never in history.

"One hears everywhere anecdotes of late, very late, remorse overtaking the hardened sinners and just saving them from final reprobation."

Journal, 1864–65. "Why talk of President Lincoln's equality of manners to the elegant or titled men with whom Everett or others saw him? A sincerely upright and intelligent man as he was, placed in the chair, has no need to think of his manners or appearance. His work day by day educates him rapidly and to the best. He exerts the enormous power of this continent in every hour, in every conversation, in every act;—thinks and decides under this pressure, forced to see the vast and various bearings of the measures he adopts: *he cannot palter, he cannot but carry a grace*

beyond his own, a dignity, by means of what he drops, e. g., all pretension and trick, and arrives, of course, at a simplicity, which is the perfection of manners."

HARVARD COMMEMORATION SPEECH

IT WAS a proud and sad, and yet a joyful day, when Harvard welcomed back those of her sons who had survived the war. All who could come were there, from boys to middle-aged men, from private soldier to general, some strong and brown, and others worn and sick and maimed, but all on that day proud and happy. The names of the ninety-three of Harvard's sons who had fallen in the war were inscribed on six tablets and placed where all could see.

In the church, where then the college exercises were held, the venerable ex-president, Dr. Walker, read the Scriptures, Rev. Phillips Brooks offered prayer, a hymn by Robert Lowell was sung, and the address was made by the Rev. George Putnam. In the afternoon the alumni, civic and military, with their guests, were marshalled by Colonel Henry Lee into a great pavilion behind Harvard Hall, where they dined. Hon. Charles G. Loring presided; Governor Andrew, General Meade, General Devens and other distinguished soldiers spoke, and poems by Dr. Holmes and Mrs. Julia Ward Howe were read. The president of the day called on

Mr. Emerson as representative of the poets and scholars whose thoughts had been an inspiration to Harvard's sons in the field.

N2726: This was the mother of Robert Gould Shaw, who lost his life a few months later, leading his dusky soldiers up the slopes of Fort Wagner. It was in his honor that Mr. Emerson wrote in the "Voluntaries,"—

Stainless soldier on the walls,
Knowing this,—and knows no more,—
Whoever fights, whoever falls,
Justice conquers evermore,
Justice after as before,—
And he who battles on her side,
God, though he were ten times slain,
Crowns him victor glorified,
Victor over death and pain.

N2727:

"O Beautiful! my Country! ours once more!

.

What words divine of lover or of poet
Could tell our love and make thee know it,
Among the Nations bright beyond compare?

What were our lives without thee?

What all our lives to save thee?

We reck not what we gave thee;

We will not dare to doubt thee,

But ask whatever else, and we will dare!"

Lowell, "Commemoration Ode.

ADDRESS AT THE DEDICATION OF THE SOLDIERS' MONUMENT IN CONCORD

IN 1836, the "Battle Monument" to commemorate "the First organized Resistance to British Aggression" had been erected "in Gratitude to God and Love of Freedom" on "the spot where the first of the Enemy fell in the War which gave Independence to the United States." Thirty-three years later, on the Nineteenth day of April, with its threefold patriotic memories for Concord,¹²⁹ the people gathered on the village common to see their new memorial to valor. The inscription on one of its bronze tablets declared that

THE TOWN OF CONCORD
BUILDS THIS MONUMENT
IN HONOR OF
THE BRAVE MEN
WHOSE NAMES IT BEARS:
AND RECORDS

¹²⁹ See note ^{N2615} of the "Historical Discourse."

WITH GRATEFUL PRIDE
THAT THEY FOUND HERE
A BIRTHPLACE, HOME OR GRAVE.

The inscription on the other tablet is the single sentence,—

THEY DIED FOR THEIR COUNTRY
IN THE WAR OF THE REBELLION

with the forty-four names.

Hon. John S. Keyes as President of the Day opened the ceremonies with a short address. The Rev. Grindall Reynolds made the prayer. An Ode written by Mr. George B. Bartlett was sung to the tune of *Auld Lang Syne*. Hon. Ebenezer Rockwood Hoar, the Chairman of the Monument Committee, read the Report, in itself an eloquent and moving speech. This was followed by Mr. Emerson's Address. Mr. F. B. Sanborn contributed a Poem, and afterwards short speeches were made by Senator George S. Boutwell, William Schouler, the efficient Adjutant-General of the State, and by Colonels Parker and Marsh respectively of the Thirty-second and Forty-seventh regiments of Massachusetts Volunteers, in which the Concord companies had served. The exercises were concluded by the reading of a poem by Mr. Sampson Mason, an aged citizen of the town.

It was a beautiful spring day. The throng was too large for the town hall, so, partly sheltered from the afternoon sun by the town elm, thickening with its brown buds, they gathered around the town-house steps, which served as platform for the speakers.

N2728: Compare, in the *Poems*, the lines in "The Problem" on the adoption by Nature of man's devotional structures.

N2729:

Great men in the Senate sate,
Sage and hero, side by side,
Building for their sons the State,
Which they shall rule with pride.
They forbore to break the chain
Which bound the dusky tribe,
Checked by the owners' fierce disdain,
Lured by "Union" as the bribe.
Destiny sat by, and said,
'Pang for pang your seed shall pay,
Hide in false peace your coward head,
I bring round the harvest day.'

N2730: Wordsworth's Sonnet, No. xiv., in "Poems dedicated to National Independence," part ii.

N2731: Mr. Emerson had in mind the astonishing fertility of resource in difficulties shown by the Eighth Massachusetts Regiment in the march from Annapolis to Washington, as told by Major Theodore Winthrop in "New York Seventh Regiment. Our march to Washington." (*Atlantic Monthly*, June, 1861). See "Resources," *Letters and Social Aims*, p. 143.

Judge Hoar in his report on this occasion said, "Two names [on the tablet] recall the unutterable horrors of Andersonville, and will never suffer us to forget that our armies conquered barbarism as well as treason."

N2732: Between 1856 and 1859 John Brown and other Free-State men, Mr. Whitman, Mr. Nute and Preacher Stewart, had told the sad story of Kansas to the Concord people and received important aid.

N2733: This was Captain Charles E. Bowers, a shoemaker, and Mr. Emerson's next neighbor, much respected by him, whose forcible speaking at anti-slavery and Kansas aid meetings he often praised. When the war came, Mr. Bowers, though father of a large family, and near the age-limit of service, volunteered as a private in the first company, went again as an officer in the Thirty-second Massachusetts Regiment, and served with credit in the Army of the Potomac until discharged for disability.

N2734: George L. Prescott, a lumber dealer and farmer, later Colonel of the Thirty-second Regiment, U. S. V. He was of the same stock as Colonel William Prescott, the hero of Bunker Hill.

Judge Hoar said of him, "An only son, an only brother, a husband and a father, with no sufficient provision made for his wife and children, he had everything to make life dear and desirable, and to require others to hesitate for him, but he did not hesitate himself."

N2735: Blaise de Montluc, a Gascon officer of remarkable valor, skill and fidelity, under Francis I. and several succeeding kings of France.

N2736: It was well said by Judge Hoar: "His instinctive sympathies taught him from the outset, what many higher in command were so slow and so late to learn, that it is the first duty of an officer to take care of his men as much as to lead them. His

character developed new and larger proportions, with new duties and larger responsibilities."

N2737: The Buttricks were among the original settlers of Concord, and the family has given good account of itself for nearly two hundred and seventy years, and still owns the farm on the hill whence Major John led the yeomen of Middlesex down to force the passage of the North Bridge. Seven representatives of that family of sturdy democrats volunteered at the beginning of the War of the Rebellion. Two were discharged as physically unfit, but the others served in army or navy with credit, and two of them lost their lives in the service. Alden Buttrick had fought the Border Ruffians in Kansas. Humphrey, a mason by trade, but a mighty hunter, left his wife and little children at the first call, and was first sergeant of Prescott's company. Mr. Emerson omits to state that he was commissioned lieutenant in the Forty-seventh Regiment the following year. His service, especially as captain in the Fifty-ninth Regiment, was arduous and highly creditable.

N2738: Edward O. Shepard, who had been master of the Concord High School, afterwards a successful lawyer, had an excellent war record, and rose to be lieutenant-colonel of the Thirty-second Regiment.

George Lauriat left the gold-beater's shop of Ephraim W. Bull (the producer of the Concord Grape) to go to the war in Concord's first company. Modest and brave, he became an excellent officer and returned captain and brevet-major of the Thirty-second Regiment.

N2739: Francis Buttrick, younger brother of Humphrey, a handsome and attractive youth, had lived at Mr. Emerson's home to carry on the farm for him.

N2740: These three were Asa, John and Samuel Melvin. Asa died of wounds received before Petersburg; both his brothers of sickness, Samuel after long suffering in the prison-pen at Andersonville. They came of an old family of hunter-farmers in Concord. Close by the wall next the street of the Old Hill Burying Ground is the stone in memory of one of their race, whose "Martial Genius early engaged him in his Country's cause under command of the valiant Captain Lovel in that hazardous Enterprise where our hero, his Commander, with many brave and valiant Men bled and died."

N2741: The writer of this letter, a quiet, handsome school-boy the year before the war broke out, lived just across the brook behind Mr. Emerson's house. He was an excellent soldier in the Thirty-second Regiment, and reënlisted as a veteran in 1864.

EDITORS' ADDRESS, MASSACHUSETTS QUARTERLY REVIEW

MR. CABOT, in his Memoir, says that just before Mr. Emerson sailed for Europe in 1847, Theodore Parker, Dr. S. G. Howe and others (Mr. Cabot was one of these) met to consider whether there could not be "a new quarterly review which should be more alive than was the *North American* to the questions of the day." Charles Sumner and Thoreau are mentioned as having been present. Colonel Higginson says that Mr. Parker wished it to be "the *Dial* with a beard." It was decided that the undertaking should be made. Mr. Parker wished Mr. Emerson to be editor, but he declined. A committee was chosen—Emerson, Parker and Howe—to draft a manifesto to the public. Mr. Emerson wrote the paper here printed, but when the first number of the Review came to him in England, was annoyed at finding his name set down as one of the editors. I think that the only paper he ever wrote for it, beyond the "Address to the Public," was a notice of "Some Oxford Poetry,"—the recently published poems of John Sterling and Arthur Hugh Clough.

Theodore Parker was the real editor. During its three years of life the *Massachusetts Quarterly*—now hard to obtain—was a brave,

independent and patriotic magazine, and, like the *Dial*, gives the advancing thought of the time in literary and social matters, and also in religion and politics.

N2742: Plutarch tells that Cineas, the wise counsellor of Pyrrhus, king of the Epirots, asked his monarch when he set forth to conquer Rome what he should do afterwards. Pyrrhus said he could then become master of Sicily. "And then?" asked Cineas. The king told of further dreams of conquest of Carthage and Libya. "But when we have conquered all that, what are we to do then?" "Why then, my friend," said Pyrrhus, laughing, "we will take our ease, and drink and be merry." Cineas, having brought him thus far, replied, "And what hinders us from drinking and taking our ease now, when we have already those things in our hands at which we propose to arrive through seas of blood, through infinite toils and dangers, innumerable calamities which we must both cause and suffer?"

N2743: "To live without duties is obscene."—"Aristocracy," *Lectures and Biographical Sketches*.

N2744: This was shortly after the annexation of Texas, and during the successful progress of the Mexican War. The slave power, although awakening opposition by its insatiable demands, was still on the increase. Charles Sumner, though a rising statesman, had not yet entered Congress.

N2745:

For Destiny never swerves,
Nor yields to men the helm.

"The World-Soul," *Poems*.

ADDRESS TO KOSSUTH

ON A beautiful day in May, 1852, Louis Kossuth, the exiled governor of Hungary, who had come to this country to solicit her to interfere in European politics on behalf of his oppressed people, visited the towns of Lexington and Concord, and spoke to a large assemblage in each place.

Kossuth was met at the Lexington line by a cavalcade from Concord, who escorted him to the village, where he received a cordial welcome. The town hall was crowded with people. The Hon. John S. Keyes presided, and Mr. Emerson made the address of welcome.

Kossuth, in his earnest appeal for American help, addressed Mr. Emerson personally in the following passages, after alluding to Concord's part in the struggle for Freedom in 1775:—

"It is strange, indeed, how every incident of the present bears the mark of a deeper meaning around me. There is meaning in the very fact that it is you, sir, by whom the representative of Hungary's ill-fated struggle is so generously welcomed...to the shrine of martyrs illumined by victory. You are wont to dive into the mysteries of truth and disclose mysteries of right

to the eyes of men. Your honored name is Emerson; and Emerson was the name of a man who, a minister of the gospel, turned out with his people, on the 19th of April of eternal memory, when the alarm-bell first was rung.... I take hold of that augury, sir. Religion and Philosophy, you blessed twins,—upon you I rely with my hopes to America. Religion, the philosophy of the heart, will make the Americans generous; and philosophy, the religion of the mind, will make the Americans wise; and all that I claim is a generous wisdom and a wise generosity."

N2746: I am unable to find the source of these lines.

N2747: For the power of minorities, see "Progress of Culture," *Letters and Social Aims*, pp. 216–219, and "Considerations by the Way," *Conduct of Life*, pp. 248, 249.

WOMAN

PERHAPS THE pleasantest word Mr. Emerson ever spoke about women was what he said at the end of the war: "Everybody has been wrong in his guess except good women, who never despair of an ideal right."

Mr. Emerson's habitual treatment of women showed his real feeling towards them. He held them to their ideal selves by his courtesy and honor. When they called him to come to their aid, he came. Men must not deny them any right that they desired; though he never felt that the finest women would care to assume political functions in the same way that men did.

Mr. Cabot gives in his Memoir (p. 455) a letter which Mr. Emerson wrote, five years before this speech was made, to a lady who asked him to join in a call for a Woman's Suffrage Convention. His distaste for the scheme clearly appears, and though perhaps felt in a less degree as time went on, never quite disappeared. At the end of the notes on this address is given the greater part of a short speech which he wrote many years later, but which he seems never to have delivered. Colonel Thomas Wentworth Higginson is reported in the *Woman's Journal* as having said at the New England

Women's Club, May 16, 1903, that Mr. Cabot put into his Memoir what Mr. Emerson said in his early days, when he was opposed to woman's suffrage (the letter above alluded to), and "left out all those warm and cordial sentences that he wrote later in regard to it, culminating in his assertion that, whatever might be said of it as an abstract question, all his measures would be carried sooner if women could vote." This last assertion, though not in the Memoir, Mr. Cabot printed in its place in the present address, and the only other address on the subject which is known to exist, Mr. Cabot did not print probably because Mr. Emerson never delivered it.

N2748: This passage from the original is omitted:—

"A woman of genius said, 'I will forgive you that you do so much, and you me that I do nothing.'"

N2749: This sentence originally ended, "And their convention should be holden in a sculpture-gallery."

N2750: From *The Angel in the House*, by Coventry Patmore.

N2751: Milton, *Paradise Lost*.

Because of the high triumph of Humility, his favorite virtue, Mr. Emerson, though commonly impatient of sad stories, had always a love for the story of Griselda, as told by Chaucer, alluded to below. In spite of its great length, he would not deny it a place in his collection *Parnassus*.

N2752: From "Love and Humility," by Henry More (1614–87).

N2753: These anecdotes followed in the original speech:—

"I use the Lord of the Kaaba; what is the Kaaba to me?" said Rabia. 'I am so near to God that his word, "Whoso nears me by a span, to him come I a mile," is true for me.' A famed Mahometan theologian asked her, 'How she had lifted herself to this degree of the love of God?' She replied, 'Hereby, that all things which I had found, I have lost in him.' The other said, 'In what way or method hast thou known him?' She replied, 'O Hassan! thou knowest him after a certain art and way, but I without art and way.' When once she was sick, three famed theologians came to her, Hassan Vasri, Malek and Balchi. Hassan said, 'He is not upright in his prayer who does not endure the blows of his Lord.' Balchi said, 'He is not upright in his prayer who does not rejoice in the blows of his Lord.' But Rabia, who in these words detected some trace of egoism, said, 'He is not upright in his prayer, who, when he beholds his Lord, forgets not that he is stricken.'"

N2754: See "Clubs," in *Society and Solitude*, p. 243.

N2755: "The Princess" is the poem alluded to. Mr. Emerson liked it, but used to say it was sad to hear it end with, *Go home and mind your mending*.

N2756: The internal evidence shows that the short speech given below was written after the war. All that is important is here given. There were one or two paragraphs that essentially were the same as those of the 1855 address.

On the manuscript is written, apparently in Mr. Emerson's hand, in pencil, "Never read," and evidently in his hand, the title, thus:—

Discours Manqué

WOMAN

I consider that the movement which unites us to-day is no whim, but an organic impulse,—a right and proper inquiry,—honoring to the age. And among the good signs of the times, this is of the best.

The distinctions of the mind of Woman we all recognize; their affectionate, sympathetic, religious, oracular nature; their swifter and finer perception; their taste, or love of order and beauty, influencing or creating manners. We commonly say, Man represents Intellect; and Woman, Love. Man looks for hard truth. Woman, with her affection for goodness, benefit. Hence they are religious. In all countries and creeds the temples are filled by women, and they hold men to religious rites and moral duties. And in all countries the man—no matter how hardened a reprobate he is—likes well to have his wife a saint. It was no historic chance, but an instinct, which softened in the Middle Ages the terror of the superstitious, by gradually lifting their prayers to the Virgin Mary and so adopting the Mother of God as the efficient Intercessor. And now, when our religious traditions are so far outgrown as to require correction and reform, 't is certain that nothing can be fixed and accepted which does not commend itself to Woman.

I suppose women feel in relation to men as 't is said geniuses feel among energetic workers, that, though overlooked and thrust aside in the press, they outsee all these noisy masters: and we, in the presence of sensible women, feel overlooked, judged,—and sentenced.

They are better scholars than we at school, and the reason why they are not better than we twenty years later may be because men can turn their reading to account in the professions, and women are excluded from the professions.

These traits have always characterized women. We are a little vain of our women, as if we had invented them. I think we exaggerate the effect of Greek, Roman and even Oriental institutions on the character of woman. Superior women are rare anywhere, as superior men are. But the

anecdotes of every country give like portraits of womanhood, and every country in its Roll of Honor has as many women as men. The high sentiment of women appears in the Hebrew, the Hindoo; in Greek women in Homer, in the tragedies, and Roman women in the histories. Their distinctive traits, grace, vivacity, and surer moral sentiment, their self-sacrifice, their courage and endurance, have in every nation found respect and admiration.

Her gifts make woman the refiner and civilizer of her mate. Civilization is her work. Man is rude and bearish in colleges, in mines, in ships, because there is no woman. Let good women go passengers in the ship, and the manners at once are mended; in schools, in hospitals, in the prairie, in California, she brings the same reform....

Her activity in putting an end to Slavery; and in serving the hospitals of the Sanitary Commission in the war, and in the labors of the Freedman's Bureau, have opened her eyes to larger rights and duties. She claims now her full rights of all kinds,—to education, to employment, to equal laws of property. Well, now in this country we are suffering much and fearing more from the abuse of the ballot and from fraudulent and purchased votes. And now, at the moment when committees are investigating and reporting the election frauds, woman asks for her vote. It is the remedy at the hour of need. She is to purify and civilize the voting, as she has the schools, the hospitals and the drawing-rooms. For, to grant her request, you must remove the polls from the tavern and rum-shop, and build noble edifices worthy of the State, whose halls shall afford her every security for deliberate and sovereign action.

'T is certainly no new thing to see women interest themselves in politics. In England, in France, in Germany, Italy, we find women of influence and administrative capacity,—some Duchess of Marlborough, some Madame de Longueville, Madame Roland,—centres of political power and intrigue.... But we have ourselves seen the great political enterprise of our times, the abolition of Slavery in America, undertaken by a society whose executive committee was composed of men and women, and which held

together until this object was attained. And she may well exhibit the history of that as her voucher that she is entitled to demand power which she has shown she can use so well.

'T is idle to refuse them a vote on the ground of incompetency. I wish our masculine voting were so good that we had any right to doubt their equal discretion. They could not easily give worse votes, I think, than we do.

CONSECRATION OF SLEEPY HOLLOW CEMETERY

WITHIN A quarter of a mile of Concord Common was a natural amphitheatre, carpeted in late summer with a purple bloom of wild grass, and girt by a horseshoe-shaped glacial moraine clothed with noble pines and oaks. It was part of Deacon Brown's farm, and reached by a lane, with a few houses on it, cut through a low part of the ridge of hills which sheltered the old town. When the Deacon died, the town laid out a new road to Bedford, cutting off this "Sleepy Hollow" (as the townspeople who enjoyed strolling there had named it) from the rest of the farm. Mr. John S. Keyes saw the fitness of the ground for a beautiful cemetery, and induced the town to buy it for that purpose; and as chairman of the committee, laid out the land. The people of the village—for Concord had nothing suburban about it then—gathered there one beautiful September afternoon to choose their resting-places and consecrate the ground. Mr. Emerson made the address on the slope just below the place where, beneath a great pine, the tree he loved best, he had chosen the spot for his own grave.

Much of his essay on Immortality was originally a part of this discourse, and therefore that portion is omitted here, its place in the essay being indicated.

ROBERT BURNS

IT is pleasant to be able to let Dr. Holmes, who was present at the Burns Festival, speak for himself and Lowell and Judge Hoar of Mr. Emerson's speech on that day. I have heard the Judge tell the story of his friend's success with the same delight.

"On the 25th of January, 1859, Emerson attended the Burns Festival, held at the Parker House in Boston, on the Centennial Anniversary of the poet's birth. He spoke, after the dinner, to the great audience with such beauty and eloquence that all who listened to him have remembered it as one of the most delightful addresses they ever heard. Among his hearers was Mr. Lowell, who says of it that 'every word seemed to have just dropped down to him from the clouds.' Judge Hoar, who was another of his hearers, says that, though he has heard many of the chief orators of his time, he never witnessed such an effect of speech upon men. I was myself present on that occasion, and underwent the same fascination that these gentlemen and the varied audience before the speaker experienced. His words had a passion in them not usual in the calm, pure flow most natural to his uttered thoughts; white-hot iron we are familiar with, but white-hot silver is what

we do not often look upon, and his inspiring address glowed like silver fresh from the cupel."

The strange part of all the accounts given by the hearers is that Mr. Emerson seemed to speak *extempore*, which can hardly have been so.

No account of the Festival, or Mr. Emerson's part therein, appears in the journals, except a short page of praise of the felicitous anecdotes introduced by other after-dinner speakers.

N2757: Here comes out that respect for labor which affected all Mr. Emerson's relations to the humblest people he met. In the Appendix to the *Poems* it appears in the verses beginning,—

Said Saadi, When I stood before
Hassan the camel-driver's door.

N2758: Thomas Carlyle.

N2759: Mr. Emerson here recalls his childhood and that of his brothers, as in the passage in "Domestic Life," in *Society and Solitude*, that has been often referred to in these notes.

N2760: Among some stray lecture-sheets was the following on the scholar or poet:—

"Given the insight, and he will find as many beauties and heroes and strokes of genius close by him as Dante or Shakspeare beheld. It was in a cold moor farm, in a dingy country inn, that Burns found his fancy so sprightly. You find the times and places mean. Stretch a few threads over an Æolian harp, and put it in the window and listen to what it says of the

times and of the heart of Nature. You shall not believe the miracle of Nature is less, the chemical power worn out. Watch the breaking morning, or the enchantments of the sunset."

SHAKSPEARE

THE FOLLOWING notes on Shakspeare were written by Mr. Emerson for the celebration in Boston by the Saturday Club of the Three Hundredth Anniversary of the poet's birth.

In Mr. Cabot's *Memoir of Emerson*, vol. ii., page 621, apropos of Mr. Emerson's avoidance of impromptu speech on public occasions, is this statement:—

"I remember his getting up at a dinner of the Saturday Club on the Shakspeare anniversary in 1864, to which some guests had been invited, looking about him tranquilly for a minute or two, and then sitting down; serene and unabashed, but unable to say a word upon a subject so familiar to his thoughts from boyhood."

Yet on the manuscript of this address Mr. Emerson noted that it was read at the Club's celebration on that occasion, and at the Revere House. ("Parker's" was the usual gathering-place of the Club.) The handwriting of this note shows that Mr. Emerson wrote it in his later years, so it is very possible that Mr. Cabot was right. Mr. Emerson perhaps forgot to bring his notes with him to the

dinner, and so did not venture to speak. And the dinner may have been at "Parker's."

ALEXANDER VON HUMBOLDT

THE BOSTON Society of Natural History celebrated the One Hundredth Anniversary of the birth of Humboldt. Dr. Robert C. Waterston presided at the Music Hall, where Agassiz made the address. In the evening there was a reception in Horticultural Hall. The occasion was made memorable by the Society by the founding of a Humboldt and Agassiz scholarship in the Museum of Comparative Zoölogy in Cambridge.

Poems by Dr. Holmes and Mrs. Howe were read. Professor E. J. Young and Dr. Charles T. Jackson gave reminiscences of Humboldt; Colonel Higginson, the Rev. Dr. Hedge and others spoke. Mr. Emerson's remarks are taken from an abstract given in the account of the celebration published by the Society.

WALTER SCOTT

ALTHOUGH MR. Emerson, in the period between 1838 and 1848 especially, when considering the higher powers of poetry, spoke slightly of Scott,—in the *Dial* papers as “objective” and “the poet of society, of patrician and conventional Europe,” or in *English Traits* as a writer of “a rhymed travellers’ guide to Scotland,”—he had always honor for the noble man, and affectionate remembrance for the poems as well as the novels. In the poem “The Harp,” when enumerating poets, he calls Scott “the delight of generous boys,” but the *generosus puer* was his own delight; the hope of the generation lay in him, and his own best audience was made up of such. In the essay “Illusions,” he says that the boy “has no better friend than Scott, Shakspeare, Plutarch and Homer. The man lives to other objects, but who dare affirm that they are more real?” In the essay “Aristocracy,” he names among the claims of a superior class, “Genius, the power to affect the Imagination,” and presently speaks of “those who think and paint and laugh and weep in their eloquent closets, and then convert the world into a huge whispering-gallery, to report the tale to all

men and win smiles and tears from many generations," and gives Scott and Burns among the high company whom he instances.

Mr. Emerson's children can testify how with regard to Scott he always was ready to become a boy again. As we walked in the woods, he would show us the cellar-holes of the Irish colony that came to Concord to build the railroad, and he named these deserted villages Derncleugh and Ellangowan. The sight recalled Meg Merrilies' pathetic lament to the laird at the eviction of the gypsies, which he would then recite. "Alice Brand," the "Sair Field o' Harlaw," which old Elspeth sings to the children in *The Antiquary*, and "Helvellyn" were again and again repeated to us with pleasure on both sides. With special affection in later years when we walked in Walden woods he would croon the lines from "The Dying Bard,"—

"Dinas Emlinn, lament, for the moment is nigh,
When mute in the woodlands thine echoes shall die."

Perhaps he had foreboding for his loved woods, beginning to be desecrated with rude city picnics, and since burned over repeatedly by the fires from the railroad,—

"When half of their charms with Cadwallon shall die."

Of this poem he wrote in the journal of 1845:—

"'Dinas Emlinn' of Scott, like his 'Helvellyn,' shows how near to a poet he was. All the Birmingham part he had, and what taste and sense! Yet never rose into the creative region. As a practitioner or professional poet he is unrivalled in modern times." Yet he immediately adds, "In lectures on Poetry almost all Scott would be to be produced."

N2761: Mr. Emerson took especial pleasure in the passage in the *Lord of the Isles* where the old abbot, rising to denounce excommunicated Bruce to his foes, is inspired against his will to bless him and prophesy his triumph as Scotland's deliverer.

Mr. Emerson, writing in his journal in 1842 of his impatience of superficial city life, during a visit to New York, alludes to the renewed comfort he had in the *Lord of the Isles*:

"Life goes headlong. Each of us is always to be found hurrying headlong in the chase of some fact, hunted by some fear or command behind us. Suddenly we meet a friend. We pause. Our hurry and *empressement* look ridiculous....When I read the *Lord of the Isles* last week at Staten Island, and when I meet my friend, I have the same feeling of shame at having allowed myself to be a mere huntsman and follower."

His boyish love for the *Lay of the Last Minstrel* remained through life. As we walked on Sunday afternoons he recited to his children the stanzas about "the custom of Branksome Hall," and the passage where the Ladye of Branksome defies the spirits of the flood and fell; and the bleak mile of road between Walden woods and home would often call out from him

"The way was long, the wind was cold,
The Minstrel was infirm and old," etc.

N2762: The *Bride of Lammermoor* was the only dreary tale that Mr. Emerson could abide, except *Griselda*.

Journal, 1856. "Eugène Sue, Dumas, etc., when they begin a story, do not know how it will end, but Walter Scott, when he began the *Bride of Lammermoor*, had no choice; nor Shakspeare, nor Macbeth."

N2763: Journal. "We talked of Scott. There is some greatness in defying posterity and writing for the hour."

SPEECH AT THE BANQUET IN HONOR OF THE CHINESE EMBASSY

WHEN THE Chinese Embassy visited Boston in the summer of 1868 a banquet was given them at the St. James Hotel, on August 21. The young Emerson, sounding an early note of independence of the past, had written in 1824:—

I laugh at those who, while they gape and gaze,
The bald antiquity of China praise;—

but later he learned to revere the wisdom of Asia. About the time when the *Dial* appeared, many sentences of Chinese wisdom are found in his journal, and also in the magazine among the "Ethnical Scriptures."

REMARKS AT THE ORGANIZATION OF THE FREE RELIGIOUS ASSOCIATION

IN THE spring of 1867, a call for a public meeting was issued by Octavius B. Frothingham, William J. Potter and Rowland Connor "to consider the conditions, wants and progress of Free Religion in America." The response was so large as to surprise the committee, and Horticultural Hall was completely filled on May 30. Rev. Octavius B. Frothingham presided. The committee had invited as speakers the Rev. H. Blanchard of Brooklyn from the Universalists, Lucretia Mott from the Society of Friends, Robert Dale Owen from the Spiritualists, the Rev. John Weiss from the Left Wing of the Unitarians, Oliver Johnson from the Progressive Friends, Francis E. Abbot, editor of the *Index*; and also David A. Wasson, Colonel T. W. Higginson and Mr. Emerson. The meeting was very successful and the Free Religious Association was founded.

Mr. Emerson's genial and affirmative attitude at this meeting was helpful and important. He wished the new movement to be neither aggressive towards the beliefs of others, nor merely a religion of works, purely beneficently utilitarian. Doubtless there were many young and active radicals strong for destructive criticism.

Mr. Emerson wished to see that in their zeal to destroy the dry husk of religion they should not bruise the white flower within. His counsel to young men was, "Omit all negative propositions. It will save ninety-nine one hundredths of your labor, and increase the value of your work in the same measure."

N2764: In the journal of 1837 he said, "Why rake up old manuscripts to find therein a man's soul? You do not look for conversation in a corpse." And elsewhere, "In religion the sentiment is all, the ritual or ceremony indifferent."

SPEECH AT THE SECOND ANNUAL MEETING OF THE FREE RELIGIOUS ASSOCIATION

N2765: Mrs. Julia Ward Howe writes of Mr. Emerson,—

"He knew from the first the victory of good over evil; and when he told me, to my childish amazement, that the angel must always be stronger than the demon, he gave utterance to a thought most familiar to him, though at the time new to me."¹³⁰

N2766: In the essay on Character (*Lectures and Biographical Sketches*), he says, "The establishment of Christianity in the world does not rest on any miracle but the miracle of being the broadest and most humane doctrine."

"The word Miracle, as pronounced by Christian churches, gives a false impression; it is Monster. It is not one with the blowing clover and the falling rain."—"Address in Divinity College," *Nature, Addresses and Lectures*.

¹³⁰ "Emerson's Relation to Society," in *The Genius and Character of Emerson*, Lectures at the Concord School of Philosophy, edited by F. B. Sanborn. Boston: J. R. Osgood & Co., 1885.

N2767: Mr. Emerson's doctrine was not to attack beliefs, but give better: "True genius will not impoverish, but will liberate." In a letter to one of his best friends who had joined the Church of Rome he said, perhaps in 1858: "To old eyes how supremely unimportant the form under which we celebrate the justice, love and truth, the attributes of the deity and the soul!"

N2768: Dr. Holmes, in his tribute to his friend, after his death, read before the Massachusetts Historical Society, said:—

"What could we do with this unexpected, unprovided for, unclassified, half unwelcome newcomer, who had been for a while potted, as it were, in our Unitarian cold greenhouse, but had taken to growing so fast that he was lifting off its glass roof and letting in the hail-storms? Here was a protest that outflanked the extreme left of liberalism, yet so calm and serene that its radicalism had the accents of the gospel of peace. Here was an iconoclast without a hammer, who took down our idols from their pedestals so tenderly that it seemed like an act of worship."

ADDRESS AT THE OPENING OF THE CONCORD FREE PUBLIC LIBRARY

THE TOWN of Concord, in the year 1782, chose a committee of ten leading citizens to give instructions to its selectmen. The third of the seventeen articles proposed by them read thus: "That care be taken of the Books of Marters and other bookes, and that they be kept from abusive usage, and not lent to persons more than one month at one time." This indicates the root of a town library. A constitution of a Library Company, dated 1784, is extant. In 1806 a Social Library was incorporated, which was merged in the Town Library in 1851. The books were kept in a room in the Town House which was open for borrowers on Saturdays.

William Munroe, son of a Concord tradesman who vied with the Thoreaus in the manufacture of lead pencils, after leaving the Concord schools went into business, and later into the manufacture of silk. His intelligence and force of character secured prosperity. He loved Concord, and, to use his own words, "desired to testify my regard to my native town by doing something to promote the education and intelligence, and thus the welfare and prosperity of its people." He gave to Concord a lot of land in the heart of the

town and a building for a Free Public Library, which, with great care and thoroughness, he had built thereon and duly furnished; and made handsome provision for care of the land and the extension of the building later. He added a generous gift for books of reference and standard works. The town thankfully accepted the gift, placed their books in it, and chose their library committee. On a fine autumn day in 1873, the library was opened with public ceremonies. Mr. Munroe in a short and modest speech explained his purpose; Mr. H. F. Smith, on behalf of the new library committee, reported its action and the gifts which had poured in; Judge Hoar received the property on behalf of the Board of Corporation, and Mr. Emerson, but lately returned with improved health from his journey to the Nile, made the short address. Writing was now very difficult for him, but the occasion pleased and moved him, and his notes on books and on Concord, and the remembrance of his friends the Concord authors but lately gone, served him, and the day passed off well.

N2769: *The Gospel Covenant*, printed in London in 1646, and quoted by Mr. Emerson in the "Historical Discourse."

N2770: Major Simon Willard, a Kentish merchant was Peter Bulkeley's strong coadjutor in the founding of Concord. He also is alluded to in the "Historical Discourse."

N2771: These extracts are from the diary of Miss Mary Moody Emerson.

N2772: This letter was written not long after the death of John Thoreau, Henry's dearly loved brother, and also of little Waldo

Emerson, to whom he became greatly attached while he was a member of Mr. Emerson's household.

N2773: Mr. Emerson here speaks for others. He could not read Hawthorne because of the gloom of his magic mirror, but the man interested and attracted him, though even as neighbors they seldom met.

N2774: Mr. Emerson notes that this is an allusion to the "Harmonies of Ptolemy."

THE FORTUNE OF THE REPUBLIC

IN 1863, during the dark days of the Civil War, before the tide had fully turned in the field, while disaffection showed itself in the North, and England and France threatened intervention, Mr. Emerson gave a hopeful lecture, the basis of the present discourse, on the Fortune of the Republic. After the war it was adapted to the new and happier conditions. On the 30th of March, 1878, six years after Mr. Emerson had withdrawn from literary work, and but four years before his death, he was induced to read the lecture in the Old South Church, in a course planned by the committee, to save the venerable building. The church was filled, Mr. Emerson's delivery was good, and he seemed to enjoy the occasion. It was probably his last speech in public, and so fitly closes the volume.

N2775: This passage occurred in the early lecture:—

"It is the distinction of man to think, and all the few men who, since the beginning of the world, have done anything for us were men who did not follow the river, or ship the cotton, or pack the pork, but who thought for themselves. What the country wants is personalities,—grand persons,—to

counteract its materialities, for it is the rule of the universe that corn shall serve man, and not man, corn."

N2776: Here followed: "What we call 'Kentucky,' or 'Vallandigham,' or 'Fernando Wood' is really the ignorance and nonsense in us, stolid stupidity which gives the strength to those names....It is our own vice which takes form, or gives terror with which these persons affect us."

N2777: This refers to a young Massachusetts scholar, of promise and beauty, whom Mr. Emerson had been pleased with, as a fellow voyager. He soon was corrupted by politics. Coming up, at a reception, to shake hands with Mr. Emerson he was thus greeted: "If what I hear of your recent action be true, I must shake hands with you under protest." Soon after, this aspirant for power attended the dinner given to Brooks after his cowardly assault on Sumner; but the moment the Emancipation Proclamation had been approved by the people, he became an ornamental figurehead at Republican and reform gatherings.

N2778: From the last scene of *Cynthia's Revels*, by Ben Jonson.

N2779: "The one serious and formidable thing in Nature is a will."—"Fate," *Conduct of Life*, p. 30.

See also "Aristocracy," in *Lectures and Biographical Sketches*, p. 50.

N2780: Ben Jonson, *The Golden Age Restored*.

N2781:

She spawneth men as mallows fresh.

"Nature," II., *Poems*.

See also the "Song of Nature," in the *Poems*.

N2782: In the earlier lecture was this passage:—

"The roots of our success are in our poverty, our Calvinism, our thrifty habitual industry,—in our snow and east wind, and farm-life and sea-life....

"There is in this country this immense difference from Europe, that, whereas all their systems of government and society are historical, our politics are almost ideal. We wish to treat man as man, without regard to rank, wealth, race, color, or caste,—simply as human souls. We lie near to Nature, we are pensioners on Nature, draw on inexhaustible resources, and we interfere the least possible with individual freedom."

N2783: In the "Historical Discourse" in this volume, Mr. Emerson tells of the evolution of the town-meeting of New England and its working excellence, and of the latter also in "Social Aims" and "Eloquence," in *Letters and Social Aims*.

N2784:

For you can teach the lightning speech,
And round the globe your voices reach.

"Boston," *Poems*.

N2785:

I will divide my goods;
Call in the wretch and slave:
None shall rule but the humble,
And none but Toil shall have.

N2786: The following passages came from the earlier lecture:—

"I must be permitted to read a quotation from De Tocqueville, whose censure is more valuable, as it comes from one obviously very partial to the American character and institutions:—

"I know no country in which there is so little true independence of opinion and freedom of discussion as in America' (vol. i., p. 259)."

"I am far from thinking it late. I don't despond at all whilst I hear the verdicts of European juries against us—Renan says this; Arnold says that. That does not touch us.

"T is doubtful whether London, whether Paris can answer the questions which now rise in the human mind. But the humanity of all nations is now in the American Union. Europe, England is historical still. Our politics, our social frame are almost ideal. We have got suppld into a state of melioration. When I see the emigrants landing at New York, I say, There they go—to school.

"In estimating nations, potentiality must be considered as well as power; not what to-day's actual performance is, but what promise is in the mind which a crisis will bring out."

"The war has established a chronic hope, for a chronic despair. It is not a question whether we shall be a nation, or only a multitude of people. No, that has been conspicuously decided already; but whether we shall be the

new nation, guide and lawgiver of all nations, as having clearly chosen and firmly held the simplest and best rule of political society.

"Culture, be sure, is in some sort the very enemy of nationality and makes us citizens of the world; and yet it is essential that it should have the flavor of the soil in which it grew, and combine this with universal sympathies. Thus in this country are new traits and distinctions not known to former history. Colonies of an old country, but in new and commanding conditions. Colonies of a small and crowded island, but planted on a continent and therefore working it in small settlements, where each man must count for ten, and is put to his mettle to come up to the need....

"Pray leave these English to form their opinions. 'T is a matter of absolute insignificance what those opinions are. They will fast enough run to change and retract them on their knees when they know who you are....

"I turn with pleasure to the good omen in the distinguished reception given in London to Mr. Beecher. It was already prepared by the advocacy of Cobden, Bright and Forster, Mill, Newman, Cairnes and Hughes, and by the intelligent Americans already sent to England by our Government to communicate with intelligent men in the English Government and out of it. But Mr. Beecher owed his welcome to himself. He fought his way to his reward. It is one of the memorable exhibitions of the force of eloquence,—his evening at Exeter Hall. The consciousness of power shown in his broad good sense, in his jocular humor and entire presence of mind, the surrender of the English audience on recognizing the true master. He steers the Behemoth, sits astride him, strokes his fur, tickles his ear, and rides where he will. And I like the well-timed compliment there paid to our fellow citizen when the stormy audience reminds him to tell England that Wendell Phillips is the first orator of the world. One orator had a right to speak of the other,—Byron's thunder-storm, where

"Jura answers from his misty shroud
Back to the joyous Alps who call to him aloud'

"The young men in America to-day take little thought of what men in England are thinking or doing. That is the point which decides the welfare of a people,—*which way does it look?* If to any other people, it is not well with them. If occupied in its own affairs, and thoughts, and men, with a heat which excludes almost the notice of any other people,—as the Jews, as the Greeks, as the Persians, as the Romans, the Arabians, the French, the English, at their best times have done,—they are sublime; and we know that in this abstraction they are executing excellent work. Amidst the calamities that war has brought on our Country, this one benefit has accrued,—that our eyes are withdrawn from England, withdrawn from France, and look homeward. We have come to feel that

"By ourselves our safety must be bought;'

to know the vast resources of the continent; the good will that is in the people; their conviction of the great moral advantages of freedom, social equality, education and religious culture, and their determination to hold these fast, and by these hold fast the Country, and penetrate every square inch of it with this American civilization....

"Americans—not girded by the iron belt of condition, not taught by society and institutions to magnify trifles, not victims of technical logic, but docile to the logic of events; not, like English, worshippers of fate; with no hereditary upper house, but with legal, popular assemblies, which constitute a perpetual insurrection, and by making it perpetual save us from revolutions."

NATURAL HISTORY OF INTELLECT AND OTHER PAPERS

NATURAL HISTORY OF INTELLECT

MR. CABOT, in his prefatory note to the volume named as above, the material for which he collected and edited in 1893, said of Mr. Emerson, "He had, from his early youth, cherished the project of a new method in metaphysics, proceeding by observation of the mental facts, without attempting an analysis and coördination of them, which must, from the nature of the case, be premature. With this view, he had, at intervals from 1848 to 1866, announced courses on the 'Natural History of Intellect,' 'The Natural Method of Mental Philosophy' and 'Philosophy for the People.' He would, he said, give anecdotes of the spirit, a calendar of mental moods, without any pretence of system.

"None of these attempts, however, disclosed any novelty of method, or indeed, after the opening statement of his intention, any marked difference from his ordinary lectures. He had always been writing anecdotes of the spirit, and those which he wrote under this heading were used by him in subsequently published essays so largely that I find very little left for present publication. The lecture which gives its name to the volume ["Natural History of Intellect"] was the first of the earliest course

[at Harvard University], and it seems to me to include all that distinctly belongs to the particular subject."

In an old note-book, perhaps of 1835, is an endeavor by Mr. Emerson to write down some of the laws of "The First Philosophy, by which is meant the original laws of the mind." There is in *English Traits* (page 240) a passage from which one might infer that the reading of Bacon may have first suggested this plan.

While in England, he made a beginning of formulating these laws in lectures, and wrote to Miss Fuller:—

"I am working away in these mornings at some papers which, if I do not, as I suppose I shall not, get ready for lectures here, will serve me in a better capacity as a kind of book of metaphysics, to print at home. Does not James Walker [Professor of Moral Philosophy at Harvard College] want relief, and to let me be his lieutenant for one semester to his class in Locke?"

Soon after writing this, he gave a course in London called "Mind and Manners of the Nineteenth Century," of which the first three were on the Natural History of the Intellect, and were called respectively "Powers and Laws of Thought," "Relation of Intellect to Natural Science," and "Tendencies and Duties of Men of Thought." Mr. Cabot gives, in his *Memoir of Emerson* (vol. ii., pp. 558–560), in condensed form, the general import of these three lectures. Most of the matter reappears in different arrangement and with additions in the subsequent courses, namely, that of 1858, in Boston, on the Natural Method of Mental Philosophy, and that on the Philosophy of the People, in 1866.

When, in 1870, too late for the satisfactory performance of the duty, Mr. Emerson had the pleasure of being invited to give lectures on Philosophy in the university courses for advanced

students at Cambridge, he made a serious effort to arrange and expand his previous notes. His strength was now failing, and the task of arrangement—always for him the most difficult part of his work—sorely burdened him, for he had to prepare two lectures a week for eight weeks. He used his old notes, with changes, and much that was later printed in the essays on Poetry and Imagination, Inspiration, and Memory. Mr. Cabot, as literary executor, has done what was possible in arrangement of the manuscript material, and in an Appendix to the Memoir has given an admirable chronological list of the addresses and lectures, often giving abstracts of unpublished lectures, from which Mr. Emerson had taken many passages to use elsewhere.

Mr. Cabot's opinion, as expressed in the quotation above given from his Prefatory Note, is entitled to high consideration in this matter, both because Mr. Emerson intrusted to his judgment the decision as to what should be published of his manuscripts, and as being himself a metaphysician of mind acute, yet broad. There was, however, in two lectures given in London and Boston, which followed that printed by Mr. Cabot in the former edition, much matter that was interesting, if "not distinctly belonging to the particular subject." Therefore in the notes to this lecture I have given many passages that belonged in it, in an earlier form, and to a second lecture, and have ventured to print a third lecture, with little pruning, in the text.

Although Mr. Cabot was not quite ready to agree with his friend in his expression, "Who has not looked into a metaphysical book? and what sensible man ever looked twice?" he gives in his Memoir a most friendly and interesting critique on the Cambridge course. Mr. Emerson admired his friend's character and the quality of his mind. The poet had great and increasing comfort in the

metaphysician, whether or no he followed him exactly in his reasoning. In 1843 Mr. Emerson wrote to Miss Elizabeth Hoar:—

"Mr. Cabot came up here and comforted the dry land with a little philosophy. Is not philosophy the simular poetry of the understanding, the mirage of the Sahara? Tax me not with levity and the old aloofness. I truly revolve with humble docility and desire the world-old problems. I worship the real, I hate the critical, and athwart the whole sky-full of imperfections can keep some steady sight of the perfect, opening there a new horizon."

Mr. Emerson himself was disappointed and mortified as to his Cambridge courses, which proved too much for his strength and so became, as he called them to Carlyle, "a doleful ordeal." After the first course, he wrote to his friend:—

"Well, it is now ended, and has no shining side but this one, that materials are collected and a possibility shown me how a repetition of the course next year—which is appointed—will enable me, partly out of these materials, and partly by large rejection of these and by large addition to them, to construct a fair report of what I have read and thought on the subject. I doubt the experts in Philosophy will not praise my discourses;—but the topics give me room for my guesses, criticism, admirations and experiences with the accepted masters, and also the lessons I have learned from the hidden great. I have a fancy that a realist is the good corrector of formalism, no matter how incapable of syllogism or continuous linked statement. To great results of thought and morals the steps are not many, and it is not the masters who spin the ostentatious continuity."

He wrote even less happily of the second course, ending thus:—

"I have abundance of good readings and some honest writing on the leading topics,—but in haste and confusion they are misplaced and spoiled. I hope the ruin of no young man's soul will, here or hereafter, be charged to me as having wasted his time or confounded his reason."

Yet many persons have remembered these lectures with pleasure. A hearer whom I think now it is proper to name—Mrs. Fields, wife of Mr. Emerson's friend, the publisher—wrote letters to a friend telling very pleasantly, from memory, what Mr. Emerson said, and after his death published this record in the *Atlantic Monthly*.¹³¹ Mr. Emerson sometimes named his subject "The Natural History of Spirit."

N2787: It seems a pity to omit the end of this sentence,—his words of honor for the student of science:—

"Sure too of their immense relations and of the grandeur of their tendency, and yet himself deriving an honest dignity from the nobility of his studies, they lend him a certain severe charm."

Writing to his wife from London, in 1848, Mr. Emerson said: "Mr. Owen, who is in England what Agassiz is in America, has given me a card to his lectures at the College of Surgeons, and shown me the Hunterian Museum [Owen was the curator]. His lecture gratified me the more, or entirely, I may say, because, like Agassiz, he is an idealist in physiology." Later Mr. Owen showed him the Museum. Dr. Forbes took him to the Royal Institution "to hear Faraday, who is reckoned the best lecturer in London." He met Lyell often, and went to the Geological Club and took great pleasure in the debate

¹³¹ "Mr. Emerson in the Lecture Room," by A. F.; *Atlantic Monthly*, June, 1883.

heard there; he also heard Dr. Carpenter lecture. That same year, though the Revolution was in progress in Paris, he "went to the Sorbonne and heard a lecture from Leverrier on mathematics. It consisted chiefly of algebraic formulas, which he worked out on the blackboard,—but I saw the man."

N2788: Here followed in the original:—

"But what most delighted me, and deepened the silence in the College of Surgeons, was, in every instance, the general statement, the statement of widest application. And I thought, could we only have a list or summary of these results! better still, could we have one collected from all the departments and presented in the same rigorous manner, without any effusion of eloquence!"

N2789: "Faraday is an excellent writer, and a wise man, and whilst I read him, I think, that if natural philosophy is faithfully written, moral philosophy need not be, for it will find itself expressed in these theses to a perceptive soul. That is, we shall read off the commandments and Gospels in Chemistry without need of translation; as we read a Latin or a French book to scholars without translation."

N2790:

Thou seek'st in globe and galaxy,
He hides in pure transparency.

"Woodnotes," II., *Poems*.

N2791:

But thou, meek lover of the good!
Find me, and turn thy back on heaven.

"Brahma," *Poems*.

N2792: An interesting abstract of passages in the original which preceded this paragraph is given in Mr. Cabot's Memoir, vol. ii., p. 558.

N2793: It is evident that this and the two preceding paragraphs were written in England in 1848. See Mr. Cabot's Memoir, vol. ii., p. 559.

N2794: This matter is treated more fully in the essay "Aristocracy," in *Lectures and Biographical Sketches*.

N2795: Here followed, in the English lecture:—

"Blessed is the region of Thought,

"'Calm pleasures there abide, majestic pains.'

One would say whoever had tasted this beatitude would hold all other goods cheap. There is a certain medicinal value to the Intellect; 't is a fine ablution which chastens and encourages. Affairs make us stout and supple, but they engage us in low connections and compromises and hurt us. Palaces and luxury degrade and starve us as much as hard work and the society of the ignorant. Thoughts refresh and dignify us again and restore price to life.

Thought, while it lasts, is the only thing of value, and appears of universal and eternal value.

"Whatever addresses itself to the intellect subordinates the senses. The Intellect absorbs so much vital power that it kills or suspends the senses. This is the meaning of the famous sentence that Vice loses half its evil by losing all its grossness. In vice it restores, in gloom and skepticism it replaces things.

"There is no day so dark but I know that the worst facts will presently appear to me in that high order which makes skepticism impossible. How can a man of any inwardness not feel the inwardness of the Universe? If he is capable of science and moral sentiment, the masses of nature undulate and flow; and in this hour of thought the world, the galaxy, is a scrap before the metaphysical power. In the words of the Koran, 'Verily worlds upon worlds can add nothing to it.'

"It is the interest of the whole human race. We announce, in contradiction to all doubt and all desperation, the tidings that the best is to be had: that the best is accessible and cheap. Every man cannot get land or jewels, but every man can get what land and money and rank are valued for, namely, substantial manhood, thoughts self-realizing and prophetic of the farthest future, thoughts of which poetry and music are the necessary expression."

N2796: In reply to criticism of his friend Alcott, Mr. Emerson used to say that his commanding merit was his habit of looking at things with a larger angle of vision than his critics, whether he brought his lines to a focus or not.

N2797: Here followed: "I claim the same irresponsibleness and security with the chemist and astronomer. The observer has no duties but fidelity. He simply sets down on tablets the height of the mercury, the variation of the needle, the declination of the

star, quite assured that these cold records will be found, when a century, or their natural cycle is complete, more beautiful rhythm, a more lovely dance, than any invention could have combined. It ought not to be less true of the metaphysician."

N2798: In *Representative Men*, Mr. Emerson wrote:—

"A philosopher must be more than a philosopher. Plato is clothed with the powers of a poet, stands upon the highest place of the poet, and (though I doubt he wanted the decisive gift of lyric expression), mainly is not a poet because he chose to use the poetic gift to an ulterior purpose."

N2799: Compare in the *Poems* "The Two Rivers" and the last verse in "Peter's Field."

Mr. Emerson's pleasure in Cæsar's offer to renounce the empire, the army and Cleopatra, if he could be shown the fountains of the ancient Nile (the story told by Lucan), seems to have been for its symbolism.

N2800:

Melting matter into dreams,
Panoramas which I saw
And whatever glows or seems
Into substance, into Law.

"Fragments on the Poet," *Poems*, Appendix.

N2801: The philosophy of Xenophanes, "one in all," appears constantly in the essays. See a passage in "Plato," in *Representative Men*: "The Same, the Same: friend and foe are of one stuff; the

ploughman, the plough and the furrow are of one stuff; and the stuff is such and so much that the variations of form are unimportant."

N2802:

Love me then and only, when you know
Me for the channel of the rivers of God
From deep ideal fontal heavens that flow.

"Fragments on Life," *Poems*, Appendix.

A passage from the earlier lecture may here be introduced:

"Show us what you will, and we are agitated with dim sentiments that we already know somewhat of this; somewhere, sometime, some eternity, we have played this game before, and have still retained some vague memory of the thing, which, though not sufficient to furnish us an account of it, yet enables us to understand it better, now that we are here."

N2803: In Mr. Cabot's Memoir, and also in the biographical sketch of Mr. Emerson in the first volume of this edition, some account is given of his visit, in 1833, to the Jardin des Plantes in Paris and its remarkable influence on his thought.

This passage in the lecture about the visits to museums is thus continued by Mr. Emerson on the influence of the stars, always felt by him:—

"Neither can a tender soul stand [under] the starry heaven and explore the solar and stellar bodies and arrangements without the wish to mix with them by knowledge. If men are analogues of acids and alkalis, of beast and bird, so are they of geometric laws and of astronomic galaxies.... This knowledge and sympathy only needs augmentation and it becomes active

or creative. The love of the stars becomes inventive and constructive. Descartes, Kepler, Newton, Swedenborg, Laplace, Schelling, wrestle with the problem of genesis, and occupy themselves with constructing cosmogonies. Nature is saturated with deity; the particle is saturated with the elixir of the Universe. Little men, just born, Copernicize: they cannot radiate as suns, or revolve as planets, and so they do it in effigy by building the orrery in their brain.

"Who can see the profuse wealth of Raphael's or Angelo's designs without feeling how near these were to the secret of structure; how little added power it needs to convert this rush of thoughts and forms into bodies.

"And we are very conscious that this identity reaches farther than we know, has no limits, or none that we can ascertain; as appears in the language that men use in regard to men of extraordinary genius. For the signal performances of great men seem an extension of the same art that built animal bodies applied to toys or miniatures. Thus in Laplace and Napoleon is the old planetary arithmetic now walking in a man, in the builder of Egyptian or in the designer of Gothic piles, a reduction of Nature's great aspects in caverns or forests, to a scale of human convenience; and there is a conviction in the mind that some such impulse is constant.

"Something like this is the root of all the great arts, of picture, music, sculpture, architecture, poetry, and the history of the highest genius will warrant the conclusion that, as a man's life comes into union with Nature, his thoughts run parallel with the highest law...

"Intellect agrees with Nature. Thought is a finer chemistry, a finer vegetation, a finer animal action. It agrees also with the moral code of the universe. There is nothing anomalous or antinomian in its higher properties, but a complete normality or allegiance to general laws, as shown by the moss, or the egg.

"The same laws which are kept in the lower parts, in the mines and workshops of Nature, are kept in the palaces and council-chambers. One

police is good for the grub and for the seraphim. Nature is a shop of one price—*prix fixé*. Great advantages are bought at great cost. It is good to see the stern terms on which all these high prizes of fortune are obtained, and which parallel in their selectness the rigor of material laws.

"Knowledge is the straight line. Wisdom is the power of the straight line, or the *square*. Virtue is the power of the square, or the *solid*. A man reads in the *Cultivator* the method of planting and hoeing potatoes, and follows a farmer hoeing along the row of potato-hills. That is knowledge. At last he seizes the hoe, and at first with care and heed pulls up every root of sorrel and witch-grass. The day grows hot; the row is long; he says to himself, 'This is wisdom; but one hill is like another; I have mastered the art. It is trifling to do many times over the same thing;' and he desists. But the last lesson was still unlearned: the moral power lay in the continuance in fortitude, in working against pleasure to the excellent end and conquering all opposition. He has knowledge, he has wisdom, but he has missed virtue, which he only acquires who endures routine and sweat and postponement of ease to the achievement of a worthy end.

"The whole history of man is a series of conspiracies to win from Nature some advantage without paying for it: especially the history of arts and of education....It is curious to see what grand powers we have a hint of and are mad to get hold of, yet how slow Heaven is to trust us with edged tools....The condition of participation in any man's thought is entering the gate of that life. No man can be intellectually apprehended as long as you see only with your eyes. You do not see him. You must be committed before you shall be intrusted with the secrets of any party.

"Besides, really and truly there were no short cuts. Every perception costs houses and lands. Every word of Genius apprises me how much he has turned his back upon. Every image, every truth, cost him a great neglect, the loss of an estate, the loss of a brilliant career opened to him; of friend, wife, child; the flat negation of a duty.

"Ah! the whole must come by his own proper growth, and not by addition; by education, not by induction. If it could be pumped into him, what prices would not be paid; money, diamonds, houses, counties for that costly power that commands and creates all these: but no, the art of arts, the power of thought, Genius, cannot be taught."

N2804: The original ending of the sentence about the grass should be given:—

"An identity long ago observed, or, I may say, never not observed, as if the gardener among his vines is in the presence of his ancestors, or shall I say, the orchardist is a pear raised to the highest power."

And the poor grass will plot and plan
What it will do when it is man.

"Bacchus," *Poems*.

N2805: The paragraph originally ended as follows, passing from remote history to the wood-walk of the day:—

"And in the conduct of the mind the blending of two tendencies or streams of thought, the union of two brains is a happy result. And usually every mind of a remarkable efficiency owes it to some new combination of traits not observed to have met before. All that delight which the eye owes to complemental colors, which the ear owes to the complemental sounds, the beautiful surprises of music, delights us still more in the combination of human life, and gives rise to love and joy. (For example, in Nature, those two harmonies of color which our winter scenery so frequently offers us, the contrast of snow lying under green pine-trees, and the snow under the dead oak-leaves; each of which contrasts gives the eye a lively pleasure.)"

N2806: "As with events, so is it with thoughts. When I watch that flowing river, which, out of regions I see not, pours for a season its streams into me, I see that I am a pensioner; not a cause, but a surprised spectator of this ethereal water; that I desire and look up and put myself in the attitude of reception, but from some alien energy the visions come."—"Over-Soul," *Essays, First Series*.

N2807:

Day by day for her darlings to her much she added more;
In her hundred-gated Thebes every chamber was a door,
A door to something grander,—loftier walls, and vaster floor.

"Fragments on Nature," *Poems*, Appendix.

N2808: Mr. Emerson used to warn against doing things consciously for example's sake, and said, "Act always from the simplest motive."

N2809: In the lecture "School," in the course on Human Culture given in 1838–39, Mr. Emerson said:—

"*Instinct*, in the high sense, is so much our teacher as almost to exclude all other teaching, but its means and weapons are the secondary instincts, the wants and faculties that belong to our organization."

N2810: In the essay on "Self-Reliance" the question is raised, "What is the aboriginal Self on which a universal reliance may be grounded?" and answered: "The inquiry leads us to that source, at once the essence of genius, of virtue, and of life, which we call Spontaneity or Instinct. We denote this primary wisdom as Intuition, whilst all later teachings are tuitions."

This shows that reliance is urged, not on the little self, but the Universal self of the Over-Soul.

N2811: This passage is metrically rendered by Mr. Emerson in the first of the "Fragments on Nature," in the *Poems*.

N2812: In "Art," in the first series of *Essays*, the importance of detachment in that field is considered (p. 354).

N2813: Compare with the concluding lines of the poem "Freedom."

N2814: This demand is made in the poem "Culture."

N2815: Here followed in the lecture:—

"There is a story in the Nursery-books, which always seemed to me a covert satire directed at the Universities, of Velent, who had a sword so wonderfully sharp that its entrance into the body was hardly to be perceived. 'I feel thy sword,' cried Æmilius, 'like cold water, gliding through my body.' 'Shake thyself,' said Velent. He did so, and fell down dead in two pieces." [Mr. Emerson, writing this in a slightly different form, spoke of this sword as "not named Excalibur, but Thought."]

After this story followed some further remarks on detachment:—

"In speaking of identity, I said, All things grow; in a living mind the thoughts live and grow, and what happens in the vegetable happens to them. There are always individuals under generals; not stagnant, not childless, but everything alive reproduces, and each has its progeny which

fast emerge into light; or what seemed one truth presently multiplies itself into many.

"Of course this detachment the intellect contemplates. The intellect forever watches, foresees this detachment. 'T is an infinite series. Every detachment prepares a new detachment. Of course the prophecy becomes habitual and reaches to all things. Having seen one thing that once was firmament enter into the kingdom of growth and change, the conclusion is irresistible, there is no fixture in the universe. Everything was moved, did spin, and will spin again. This changes once for all his view of things. Things appear as seeds of an immense future. Whilst the dull man always [lives] in a finished world, the thinker always finds himself in the early ages; the world lies to him in heaps."

Here follows the paragraph in the text: "The intellect that sees the interval partakes of it," etc.

N2816: The coldness of Intellect is somewhat grimly pictured in the verses called "Philosopher," in the Appendix to the *Poems*. The above paragraph in the text was originally thus continued:—

"You may see it in any obscure family in which the boy of genius is born; it makes him strange among his housemates. He can take what interest he will in their interests and pursuits, he cannot be mixed with them; he holds a Gyges ring in his hand, and can disappear from them at will....

"This inevitable interval is one of the remarkable facts in the natural history of man, a fact fraught with good and evil. It is only those who have this detachment who interest us. If we go to any nation, who are they whom we seek? The men of thought. If we go to any society, though of seraphim, he only would interest us who comprehended and could interpret the thought and theory, and that act does instantly detach him from them. That thought is the unfolding of wings on his shoulders. The

poet, in celebrating his hero, celebrates to the wise ear his superiority to his hero, and announces to the intelligent the lowness of that he magnifies. Shall I say that it is an exquisite luxury, for so I feel it, the speech of those who speak of things by the genius of the things, and not by the facts themselves? What is vulgar but the laying the emphasis on persons and facts, and not on the quality of the fact?"

N2817: Here followed in one lecture:—

"The correction for this insubordination is here, that religion runs in true and parallel lines through the Intellect, as through Morals. All the powers and rewards of Faith which we find in the Good hold equally in the region of the True. Integrity is really the fountain of power in one as in the other. Seek first the kingdom of Heaven and all shall be added. It is the office of the poet to justify the moral sentiment and establish its eternal independence of demoniac agencies."

N2818: "Emerson's method was to let the inspirations of the spirit lead the way, instead of inflicting one's hypotheses and presuppositions on the spirit. He wanted to know what life was for the spirit, not what it could be made for a certain philosophic demand."—*Man and the Divine Order*, by Horatio W. Dresser.

N2819: Two thoughts in this paragraph are to be found in the collection of fragmentary verses in the Appendix to the *Poems*:—

That book is good
Which puts me in a working mood.
Unless to Thought is added Will,
Apollo is an imbecile;—

and

Hold of the Maker, not the Made;
Sit with the Cause, or grim or glad.

N2820: "The intellect constructive, which we popularly designate by the word Genius," is discussed in "Intellect," in the first series of Essays. It is there spoken of as "the generation of the mind, the marriage of thought with Nature."

N2821: Compare the "Song of Nature," in the *Poems*.
A passage on this subject from a lecture may here be inserted:—

"A small acceleration of the intellectual processes without loss of tenacity (continuance) would of course add indefinite ages to human life; a small increase of perception would be equivalent to any increase of power. Observe the effect upon one mind of being comprehended by another mind and forced to take a leap forward, the first hint perhaps of a larger dialectic. He who has seen one proof, ever so slight, of the terrific powers of this organ, will remember it all the days of his life. The most venerable proser will be surprised into silence. It is like the first hint that the earth moves, or that iron is a conductor of fluids, or that granite is a gas. The solids, the centres, rest itself, fly and skip. Rest is a relation, and not rest any longer. And here is revealed to me some neighboring activity, a mere intellection, some new condition of ideal order, which seems to have dropped wings to solid earth and solid houses and real estates, which, like so many nimble mosquitoes, do exceedingly leap and fly. How many times?—once at least in every man's experience has repeated itself the question of Callicles, 'If you are in earnest, Socrates, and these things which you say are true, is not our human life subverted, and are not all our actions (as it seems) contrary to what they ought to be?'"

N2822: In his journal in the autumn of 1838, Mr. Emerson records the visit to him of Jones Very, then in a state of strange exaltation of mind in which his host found food for thought. He writes: "Entertain every thought, every character that goes by with the hospitality of your soul.... Especially if one of these monotones (whereof, as my friends think, I have a savage society like a menagerie of monsters) come to you, receive him. For the partial action of his mind in one direction is a telescope for the objects on which it is pointed."

N2823: The paragraph suggests the complaint of Alphonso of Castile, in the *Poems*.

N2824: Mr. Emerson's method of listening for the thought and recording it in its purity, and his fear of the "ambitious interference which we miscall Art," as he once expressed himself, naturally resulted in the sentence—or paragraph—being, for him, the natural limit of expression, as his biographer has said. He himself complained to Carlyle of these "infinitely repellant particles" which he was striving to unite into a whole. Matthew Arnold and others have complained of his style's lacking "the requisite wholeness of good tissue." Yet his best work stands as he would have it. He meant, like Plotinus, not to "hastily disclose to every one the syllogistic necessities of his discourse." He allowed intervals for the electric spark to pass and thrill the reader. As he told a young friend, "Try and leave a little thinking for him; that will be better for both. The trouble of most writers is that they spread too thin. The reader is as quick as they, has got there before, and is ready and waiting.... If you can see how the harness fits, he can. But be sure that you see it."¹³²

¹³² *Talks with Ralph Waldo Emerson*, by Charles J. Woodbury. New York: The Baker and Taylor Co., 1890.

There are many readers who would not wish the method changed. Herman Grimm wrote:—

"What he has written is like life itself—the unbroken thread ever lengthened through the addition of the small events which make up each day's experience....His sentences are series of thoughts. He begins as if continuing a discourse whose opening we had not heard, and ends as if only pausing to take breath before going on.

"We feel that Emerson never wished to say more than just what at the moment presented itself to his soul. He never sets up a system, never defended himself. He speaks as if he had never been assailed; as if all men were his friends, and held the same opinions as himself."

N2825: This teaching is found in "Literary Ethics," in the volume *Nature, Addresses and Lectures*, and in "The Scholar," in *Lectures and Biographical Sketches*.

N2826: These paragraphs follow in one of the lectures:—

"The brain and hands are hardly contemporaries. The brain is the ancestor of the man. The intellectual is the watchman, the angel in the sun, and announces the far-off age. All its laws it can read before yet the happy men arrive who enter into power; but the rest of the man must follow his head, and if I can see the eyes, I will trust that he will soon be able to disengage his hands.

"Every truth tends to become a power; every idea from the moment of its emergence begins to gather material forces, and, after a little while, makes itself known in the spheres of politics and commerce. It works first on thoughts, then on things, and makes feet and afterwards shoes; first hands and then gloves; makes the men, and so the age and its material soon after."

N2827:

The heavens that now draw him
With sweetness untold,
Once found,—for new heavens
He spurneth the old.

"The Sphinx," *Poems*.

N2828: In the essay on Character (*Lectures and Biographical Sketches*) Mr. Emerson says the Moral Sentiment "helps us, not by adding, but by putting us in place," and speaks of Truth, Power, Goodness and Beauty as convertible terms; and in "Greatness" (*Letters and Social Aims*) says that "the Intellect and Moral Sentiment cannot be separated." See also "Worship," in *Conduct of Life*.

N2829: He counselled young writers, "Omit all negative propositions; it will save ninety-nine one hundredths of your labor and increase the value of your work in the same measure."

See also his poem "Music."

N2830: This last Ego is the self of "Self-Reliance."

N2831: The conclusion brings to mind the last lines in the poem "Wealth."

These sheets from the early lecture may be added:—

"Every truth is universally applicable, thousand-sided. Every drop of blood has great talent; the original cellule seems identical in all animals, and only varied in its growth by the varying circumstance which opens now this kind of cell and now that, causing in the remote effect now horns, now

wings, now scales, now hair; and the same numerical atom, it would seem, was equally ready to be a particle of the eye or brain of man, or of the claw of a tiger. In the body of a man, all those terrific agencies which belong to it, the capability of being developed into a saurus or a mammoth, a baboon that would twist off heads, or a grampus that tears a square foot of flesh from a whale, are held in check and subordinated to human genius and destiny, but it is ready at any time to pass into other circles and take its part in poorer or in better forms. Nay, it seems that the animal and vegetable texture at last are alike. Well, as thus the drop of blood has many talents lurking in it, so every truth is much more rich.

"Every law detected in any part of Nature holds in every other part. The law of music is law of anatomy, of algebra and astronomy, of human life and social order.... It is certain that the laws are all versions of each other. The symmetry and coördination of things is such that from any creature, well and inly known, the law of any other might be legitimately deduced. Palmistry, phrenology, astrology, rest on a real basis. 'T is certain that there is a relation between the stars and your wedding-day, between the lines of your hand and the works done by it, between the activity of your brain and its outward figure,—there is a relation,—though you may easily fail to find it.

"The world, the universe, may be reeled off from any idea like a ball of yarn. Just see how the chemist, how the Christian, how the negro, disposes of it with the greatest case after his own peculiar habit, and finds all the facts fit and confirm his view. And each science and law is, in like manner, prospective and fruitful. Astronomy is not yet astronomy while it only counts the stars in the sky. It must come nearer and be related to men and their life, and interpret the moral laws. In learning one thing you learn all. Egg and stratum go together....

"The ground of hope is in the infinity of the world which reappears in every particle. The man truly conversant with life knows, against all

appearances, that there is a remedy for every wrong, and that every wall is a gate."

These two passages from the journals should be also given:

1843. "That the Intellect grows by moral obedience seems to me the Judgment Day. Let that fact once obtain credence and all wrongs are righted; sorrow and pity are no more, nor fear, nor hatred; but a justice as shining and palpable as the best we know of kings and caliphs and ordeals, and what we call 'poetical justice,' that is, thorough justice, justice to the eye and justice to the mind—takes place."

1865. "Our thoughts have a life of their own, independent of our will."

INSTINCT AND INSPIRATION

THIS LECTURE is not presented in its completeness. Many passages in the one preceding it were at one time portions of this, as were also some of the most important parts of the essays on Worship and Immortality. Some of the matter came from the lecture called "Tendencies and Duties of Men of Thought," given by Mr. Emerson in London in 1848, as is shown by the reports of those lectures in Douglas Jerrold's newspaper. The lecture as here printed is exactly as I found it (its sheets sewed together for delivery), with the exception of the passages printed elsewhere, most of which are indicated in the notes. The heading "Instinct and Inspiration" is found on many of the sheets.

N2832: Here followed the paragraph in "Worship" (*Conduct of Life*, p. 230), "Why should I hasten to solve every riddle which life offers me?" etc.

N2833: In the Address at Tufts College in July, 1862, called "Celebration of Intellect," printed in this volume, Instinct as an oracle is spoken of.

N2834: Here was a short passage on the need of heat, animal spirits, to cold, arid natures, printed in the essay "Society and Solitude."

N2835: This suggests one of the last stanzas in "The Poet," beginning,—

"Suns and stars their courses keep."

N2836: A paragraph follows, now found in the preceding lecture, on the limited interest we take in the personality of people, beginning, "There is a conflict between a man's private dexterity."

N2837: A page now printed in "Poetry and Imagination" (*Letters and Social Aims*, p. 40) was taken from this lecture concerning the writer and artist, as to the astonishing results that may come through him when he is "at the top of his condition."

N2838: Here followed a few sentences, now printed in "Illusions" (*Conduct of Life*, p. 321), as to the rare moments when the capital questions of human life are revealed to our eyes.

N2839: A passage comparing wisdom to electricity,—a transient state of which some men are capable,—originally here, is now in the concluding paragraph of "Clubs". (*Society and Solitude*).

N2840: See *Essays, Second Series*, p. 69.

N2841: See "Immortality," in *Letters and Social Aims*, p. 346.

N2842: Here follows the passage beginning, "He must be armed, not necessarily with musket and pike," etc., now in "Worship" (*Conduct of Life*, p. 224).

N2843: The two following pages in the manuscript are now printed respectively in "Inspiration" (*Letters and Social Aims*, p. 275), "What is a man good for without enthusiasm?" etc., and in the preceding lecture on Natural History of Intellect, apropos of "monotones" in the value of concentration.

N2844: Here follows the passage, now in "Immortality," beginning, "Ignorant people confound reverence," and ending, "and these by man's suffering are enlarged and enthroned."

N2845: Several following pages of the lecture which treated of immortality were printed in "Worship" (*Conduct of Life*), and so are here omitted.

N2846: Here followed the last paragraph but one in "Worship."

N2847: The concluding paragraph of "Worship" came here.

MEMORY

FEW MEN would write of Memory until past

The middle of the mount
Up which the incarnate soul must climb;

and it was not until 1857 that we know of Mr. Emerson's having written a lecture on that subject. He read it to his neighbors at the Concord Lyceum. The next year it appears as the fifth lecture in the course on the Natural Method of Mental Philosophy read by him at the Freeman Place Chapel in Boston. Essentially the same lecture, no doubt with additions, held the same place in the course then called "The Natural History of Intellect," in the University lectures for students and outsiders given at Cambridge in 1870 and 1871.

N2848: Critics complain that Mr. Emerson makes so little of sin. Mr. Cabot said: "Sin and he had nothing to do with one another," and found the early poem "Grace" (printed in the *Dial* first and now included in the Appendix to the *Poems*) the more surprising.

N2849: "The difference between the actual and the ideal force of man is happily figured by the Schoolmen, in saying that the knowledge of man is an evening knowledge, *vespertina cognitio*, but that of God is a morning knowledge, *matutina cognitio*" (*Nature, Addresses and Lectures*, p. 73; see note^{N0049} there).

N2850: Mrs. Ednah D. Cheney tells the following story:—

"After hearing the lecture on Memory, a smart young lawyer approached a lady the next evening, who was talking of it to a friend. 'O, it was all very pretty and pleasant,' he said, 'but no real thought in it! I can't remember anything he said; can you?' 'Yes,' replied the lady, 'he said "Shallow brains have short memories."'"

Some one who heard this lecture at the University course, when Mr. Emerson's memory had failed with his strength, told with much amusement that he spoke of the value, in keeping dates, of some old-fashioned mnemonic verses, which he repeated and then tried to explain, but failed, because the key had slipped from his memory. The hearer did not remember Ecclesiasticus's word that "Even some of us wax old."

N2851: Mr. Emerson tells of the "great days" and their demands in "Friendship," in the first series of *Essays*.

N2852: In an early journal Mr. Emerson wrote of the comfort the high collar of his cloak gave him when the preaching was bad. He alluded to it in the Divinity School Address.

N2853: I am unable to find this line.

N2854:

And I shall hear my bluebirds' note
And dream the dream of Auburn dell.

"May-Day," Poems.

N2855:

This passing moment is an edifice
Which the omnipotent cannot rebuild.

"Fragments on Life," Poems, Appendix.

THE CELEBRATION OF INTELLECT

THIS ADDRESS, as its opening passage shows, was made in the early days of the Civil War, before the forces of North and South had met in the disastrous battle of Bull Run. The task before the Government, the vast proportions and issues of the four years' struggle, were not then appreciated, and as yet the colleges had not been called on to furnish their splendid quota to save the country,—in Lowell's words,—

"To stand beside her
When craven churls deride her
To front a lie in arms, and not to yield;"

nor had Holmes made his terrible appeal in "Never or Now!" Yet later, in the dark days when Emerson wrote

Peril around, all else appalling,
Cannon in front and leaden rain,
Him Duty through the clarion calling
To the van, called not in vain,—

he would, none the less, have urged the higher function of the scholar, after he had shown his manhood by repelling the foe at the gate, in making Peace lasting, and the Country worth saving, by his standards and counsels.

This address is incomplete, as many passages were taken from it for the Essays on the same general theme, "The Man of Letters," "The Scholar" (*Lectures and Biographical Sketches*).

N2856: Here followed the passage later printed in "The Man of Letters" (*Lectures and Biographical Sketches*, p. 256) on the absurdity of talking of the classic studies of statesmen who confound the first principles of right and wrong in their public words and action.

N2857: Here on the manuscript sheet are notes: "Luther; Kossuth; Quincy Adams in his magnificent defence on the floor of Congress."

N2858: Passages now found in "The Man of Letters" (*Lectures and Biographical Sketches*, pp. 252–3) were taken from this part of the discourse, commending to students their profession as thinkers as the real secret of power, the Art of Command, and as to the superiority of intellect to material force.

N2859: Here followed a short passage now in "The Scholar" (*Lectures and Biographical Sketches*, p. 264) as to the perverse affectation of scholars to be men of the world. And after this the remarkable paragraph on pages 282 and 283 in the same essay, as to a need of a revival of the human mind, and upon Instinct.

N2860: Here follows a passage now found on pages 279, 280, in "The Scholar," on the disappointment the youth feels in the existing order of things, followed by that on page 263 of the same essay, on the "beatitude of the intellect flowing into the faculties."

N2861: This was the case both with Emerson and Thoreau, who both knew how to find their own food in the College Library, which they eagerly used, but incurred some academic censure for neglect of the curriculum.

N2862: These strictures on Harvard College at that period were bracketed in the manuscript, as if Mr. Emerson questioned whether or no to read them.

N2863: First written "decrepit bostonians" (*sic*).

N2864: Here followed a passage like one in "Education:" "Talk of Columbus and Newton! The babe born in the novel yonder is the beginning of a revolution as great as theirs. Why try to be somewhat else?"

N2865: Here follow the questions, as in "The Scholar" (p. 284):—

"And the questions they put are, Who are you? What do you? What is your talent, your contribution to the common weal? Can you obtain your wish? Is there method in your consciousness? Can you see tendency in your life? Can you help any soul? What is it you existed to say?"

This is followed by a passage on the need to the scholar of courage to admit ignorance and ask questions, and on the great

lessons of momentary defeat (see "Social Aims," pp. 95, 96, in *Letters and Social Aims*).

COUNTRY LIFE

"COUNTRY LIFE" was the opening lecture of a course given by Mr. Emerson in the Freeman Place Chapel in Boston, in March, 1858. It was followed by "Works and Days" (printed in *Society and Solitude*), "Powers of the Mind," "Natural Method of Mental Philosophy," "Memory" (the matter of these three mostly now found in "Natural History of Intellect") and "Self-Possession."

N2866: Mr. Emerson, in the lecture, made a version of Chaucer's lines more intelligible to modern hearers, thus:—

"Then long the folk to go on pilgrimages
And palmers for to seeken stranger strands,
To serve the saints beknown in sondry lands."

N2867: Here follows in the manuscript the passage about trees, now printed in the Address at Sleepy Hollow Cemetery (see *Miscellanies*).

N2868: These were Mr. Lane and Mr. Wright, the companions of Mr. Alcott in the unsuccessful Fruitlands community at Harvard. Cows were dispensed with there on the ground that it was wrong to enslave them, rob the calf of its food or the animal of its life; also that animal manure defiled the ground.

N2869: These pictures of the advance from winter to spring may be found in "May-Day," in the *Poems*.

N2870: The original prose form of the poem "Seashore" is here omitted. It may be found in the Notes to the *Poems*.

N2871: From Linnæus's *Flora Laplandica* (Pulteney).

N2872: See some fragmentary verses, "October," in the Appendix to the *Poems*.

N2873: Here is omitted the passage in praise of the farmer with which the essay "Farming" ends (*Society and Solitude*).

CONCORD WALKS

THIS LECTURE was evidently given by Mr. Emerson as his contribution to the village Lyceum, probably in 1867. Its shortness seems to show that it was the more domestic and local part of the larger lecture on Country Life which here precedes it. Both manuscripts bear that name, and some sheets that occur in both are preserved, in this volume, only in the lecture into which they fit best.

N2874: The charm of a river trip with Thoreau is celebrated in the essay "Nature" (*Essays, Second Series*, p. 173).

N2875: The young girls and the boys who passed the house daily on their way to the Grammar or High School had little thought of the interest and pleasure with which the older scholar looked at them from his study window. Mr. Emerson was for many years on the School Committee. He much enjoyed the public examinations (they would be called "exhibitions" now, but they are obsolete), trying to the teacher and the more sensitive pupils, but highly interesting to the elders. Yet there, as elsewhere, he sat as a learner,

and came home to praise the declamation or recitation of the girls and boys, and the Napoleonic *aplomb* of the schoolmistress, daughter of one of his farmer neighbors.

N2876: The Belgian pomologist, whose results with coarse wild stock in a "state of variation" (by endless resowing of the better products obtaining fine fruit), are often alluded to in the Essays, and his "Theory of Amelioration" was carried by Emerson into higher fields. (See note 2^{N0928} to page 49 in *English Traits*.)

N2877: The delight in the wood-walks is set forth in the poem "Waldeinsamkeit."

Mr. Emerson wrote to Carlyle, in May, 1846:—

"I, too, have a new plaything, the best I ever had,—a wood-lot. Last fall I bought a piece of more than forty acres, on the border of...Walden Pond,—a place to which my feet have for years been accustomed to bring me once or twice a week at all seasons....In these May days, when maples, poplars, oaks, birches, walnut and pine are in their spring glory, I go thither every afternoon."

N2878: The Upas tree of the tropics was reputed fatal to those who sat beneath it. The Soma was used in sacrifices in ancient India. *Asclepias Viminalis*, a remarkable plant of the milkweed family. The Mandrake root, because of its resemblance to a human body, was viewed with superstition; it was said to shriek when torn up by night. Mr. Emerson saw the Papyrus reed, which gave the ancients paper, growing in Sicily. Dittany, supposed to be named from Mount Dicte, in Crete, where it grew. Asphodel, associated with legends of Greece and Sicily. Nepenthe, a plant which brought calm and forgetfulness, mentioned in the *Odyssey* (book IV.)

where Helen gives it to Telemachus. Hæmony, a Thessalian magic herb, mentioned in Milton's *Comus*. The herb Moly, with black root and white flower, was given by Hermes to Odysseus to overcome the charms of Circe (*Odyssey*, book X.). Amomum, a tropical plant allied to ginger and cardamon.

N2879: These friends Mr. Emerson had. His walks were usually alone, for, as he said, Nature's rule is *One to one, my dear*; but in the earlier years of his Concord life he went as a pupil to be shown the sights and learn the lore of each season, now with Henry Thoreau, the naturalist who knew the facts, but read also the higher meaning, and now with Ellery Channing, the poet with an artist's eye and speech.

N2880: Dr. Jeffries Wyman of Cambridge, the comparative anatomist, as remarkable for his modesty as his attainments, is here alluded to. He was one of the company celebrated in "The Adirondacs" (*Poems*). Dr. Charles T. Jackson (the brother of Mrs. Emerson) and Professor J. Hall of Albany, separately, made the first geological surveys of several States.

N2881:

But the meanings cleave to the lake,
Cannot be carried in book or urn;
Go thy ways now, come later back,
On waves and hedges still they burn.

"My Garden," *Poems*.

BOSTON

IT MUST be remembered that Emerson was Boston born and schooled. His birthplace was on the ground now occupied by Hovey's great store; he played in the pleasant gardens on Summer and Chauncy streets whence the blue Bay could then be seen, and he drove his mother's cow to pasture along Beacon Street. Boston was his home until he left college. Mrs. Cheney tells that an earnest young woman of that favored city put this question to another native of the place, "Which could you have least spared out of your life,—the Common or Emerson?"

This lecture was the closing one in the course on Life and Literature given in Boston in the spring of 1861. It was first printed in the *Atlantic Monthly* for January, 1892.

N2882:

Ever the Rock of Ages melts
Into the mineral air,
To be the quarry whence to build

Thought and its mansions fair.

"Fragments on Life," *Poems*, Appendix.

N2883: The following is from a sheet of "Aristocracy," as delivered in Boston:—

"But I consider this city of New England an exceptional community; that here the extraordinary abundant means, provided by private bounty and public law, have enabled every poor man to secure to any talent in his child a good culture, and to the great multitudes (of the middle classes) a finished education,—what with libraries, high schools, Latin schools, college scholarships and other foundations; schools of design; and the great sympathy of the community with any superior talent, and the great opportunity and career opened to it,—I consider this city to lie in sunlight, and citizenship in it to be a sort of nobility. And the poet Saxe seems to believe that all of us share this good will for our city,

"And born in Boston needs no second birth."

N2884: He might well have added the name of Carlyle, but for his own part in introducing his works here.

N2885:

"Come dal fuoco il caldo, esser diviso
Non puo 'l bel dall' eterno."

Michael Angelo.

(As from fire the heat cannot be separated,—neither can beauty from the eternal.)

N2886: Mr. Emerson first used this phrase in vain endeavor to get his friend Carlyle to come to see America in 1854. In the letter it followed the remark, "John Bull interests you at home, and is all your subject."

N2887: "New England, on each new political event, resolves itself into a debating society, and is the Germany of the States."—Lecture on New England.

N2888: Some members of the Society of Friends have been troubled that Mr. Emerson should have quoted this amusing if harsh expression of an old author. The late Mr. Richard P. Hallowell, in his work, *The Quaker Invasion of Massachusetts*, has produced evidence rebutting much of the received history of the disturbances by the Quakers, which seems to have been exaggerated. Mr. Emerson merely incidentally alludes to one of these as reported. His feeling towards the Friends was always one of respect and much sympathy. He once told his cousin, the Rev. D. G. Haskins, "I believe I am more of a Quaker than anything else; I believe in the 'still, small voice.'"

N2889: Mr. Emerson puts this playfully in his Boston poem:—

What care though rival cities soar
Along the stormy coast,
Penn's town, New York and Baltimore,
If Boston knew the most!

N2890: The editor would be glad to know the source of these lines, which neither he nor his friends have been able to find.

MICHAEL ANGELO

FIND the following entry in Mr. Emerson's diary during his short visit to Italy in his younger days:—

FLORENCE, 28th April, 1833.

I have been this day to Santa Croce, which is to Florence what Westminster Abbey is to England. I passed with consideration the tomb of Nicholas Macchiavelli, but stopped long before that of Galilias Galileo, for I love and honor that man,—except in the recantation,—with my whole heart. But when I came to Michael Angelo Buonarotti my flesh crept as I read the inscription. I had strange emotion; I suppose because Italy is so full of his fame. I have lately continually heard of his name and works and opinions. I see his face in every shop window, and now I stood over his dust.

In 1835, soon after his return, he gave before the Society for the Diffusion of Useful Knowledge, in Boston, six lectures on Biography. The first of these was on the tests of Great Men,—very possibly in part the chapter on the Uses of Great Men with which *Representative Men* opens,—and then he treated of the lives of

five, beginning with Michael Angelo the artist, followed by the reformer Luther, the preacher George Fox, the poet Milton, and the statesman and orator, Edmund Burke. Dr. Holmes says,—

“Why Emerson selected Michael Angelo as the subject of one of his earliest lectures is shown clearly enough by the last sentence as printed in the Essay: ‘He was not a citizen of any country; he belonged to the human race; he was a brother and a friend to all who acknowledged the beauty that beams in universal Nature, and who seek by labor and self-denial to approach its source in perfect goodness.’”

Greatly as Mr. Emerson admired his work,—a copy of “The Fates” always hung over his study mantel, and engravings of the Sibyls from the Sistine Chapel hung on the walls,—the character and recorded utterance of the man interested him even more. In 1868 he wrote, “I told W—that I prize Michael Angelo so much, that, whilst I look at his figures, I come to believe the grandiose is grand. Thomas Gray, in poetry, has relations to Michael Angelo, and the like question between the grandiose and grand is suggested in reading his odes.”

The lecture was published in the *North American Review* in June, 1837; the present essay is a reprint of that article.

N2891: From Andrew Marvell’s “Horatian Ode, on the Return of Cromwell:”

“He nothing common did, or mean,
Upon that memorable scene,

.

Nor called the Gods in vulgar spite
To vindicate his helpless right,” etc.

N2892: Michael Angelo, however, seems to have doubted the inherent stability in the construction of the dome, and girded it with great chains, which in later years have been reinforced.

N2893: I believe this portrait is lost, but that it is alluded to by Michael Angelo in a sonnet.

N2894: This was undoubtedly the noble statue of St. George by Donatello, until lately in a niche outside of one of the churches, now in the National Museum of Fine Arts at Florence.

N2895: Mr. Emerson was fond of repeating, in looking at an engraving of Michael Angelo which hung in his house, the lines of Tennyson in *In Memoriam*:—

“And over those ethereal eyes
The bar of Michael Angelo.”

N2896: In the journal for 1864 Mr. Emerson quotes Niebuhr thus: “Michael Angelo was the man to be first King of Italy,” and adds, “And I should say of Michael that the power of his pictures and works is not so much correct art as it is great humanity. I accept easily all the criticism I hear on his style. It does not lessen him.”

MILTON

FROM HIS early student days, Emerson honored and loved Milton. He often praised the majesty and courageous rectitude of his prose, but he took delight in *Comus* and *Lycidas*. He used to tell how, in his youth, confined to his berth in a small schooner on a stormy voyage to Florida, he, little by little, recollected all of *Lycidas* but three lines. He had not known that it lay there in his memory ready for his solace.

As has been said in the notes to the foregoing essay, Milton's was one of the five lives which Mr. Emerson chose to celebrate in his first course of Boston lectures. In speaking of these, Bancroft, in an article in the *North American Review*, written two years after Mr. Emerson's death, says:—

"Emerson, in the choice of the next hero over whom he was to shed the lustre of his praise, was equally guided by his own nature. In spite of all his gracefulness and reserve and love of the unbroken tranquillity of serene thought, he was by the right of heredity a belligerent for the cause of freedom, of which John Milton, among all the great English poets, was the foremost champion. From the inmost core of his character Milton was

the herald of rightful liberty, and its ever-ready warrior where it fell into danger. He wrote in sublime and impassioned prose for liberty of mind, of man, and of the state. He has furnished to the English-speaking world the best epic, the best ode, the best elegies, in the mood of joyousness and in the mood of meditation; sonnets full of high thought expressed in the strongest and noblest words, and the most delightful mask for representation in the social circle. In advanced life, when all his hopes for the political reform of England had been wrecked, he writes the best tragedy that has ever been written in modern times according to the rules of the Greek drama, and in it paints in perfection the comeliness and the reviving power of men 'armed with celestial vigor and heroic magnitude of mind;' and then, mindful of the sorrows that had fallen on himself and his associates, is driven for consolation to remember that

"Patience is more oft the exercise
Of saints, the trial of their fortitude."

Such a hero had a right to find a resting-place on Emerson's breast."

Dr. Holmes, in his *Life of Emerson*, thus showed the necessary bond between the writer and his subject:—

"Consciously or unconsciously men describe themselves in the characters they draw. One must have the mordant in his own personality or he will not take the color of his subject. He may force himself to picture that which he dislikes or even detests; but when he loves the character he delineates, it is his own, in some measure, at least, or one of which he feels that its possibilities and tendencies belong to himself. Let us try Emerson by this test in his *Essay on Milton*....

"It is the prerogative of this great man to stand at this hour foremost of all men in literary history, and so (shall we not say?) of all men, in the power to inspire. Virtue goes out of him into others....He is identified in the mind

with all select and holy images, with the supreme interests of the human race....Better than any other he has discharged the office of every great man, namely, to raise the idea of Man in the minds of his contemporaries and of posterity,—to draw after Nature a life of man, exhibiting such a composition of grace, of strength, and of virtue as poet had not described nor hero lived. Human nature in these ages is indebted to him for its best portrait. Many philosophers in England, France, and Germany have formally dedicated their study to this problem; and we think it impossible to recall one in those countries who communicates the same vibration of hope, of self-reverence, of piety, of delight in beauty, which the name of Milton awakes.'

"Emerson had the same lofty aim as Milton, 'To raise the idea of man;' he had 'the power to *inspire*' in a preëminent degree. If ever a man communicated those *vibrations* he speaks of as characteristic of Milton, it was Emerson. In elevation, purity, nobility of nature, he is worthy to stand with the great poet and patriot, who began, like him, as a schoolmaster, and ended as the teacher in a school-house which had for its walls the horizons of every region where English is spoken."

The "Milton" was published in the *North American Review* for July, 1838.

N2897: In the early verses on The Poet, given in the Appendix to the *Poems*, Mr. Emerson said:—

Yet every scroll, whereon he wrote
In latent fire his secret thought,
Fell unregarded to the ground,
Unseen by such as stood around.
The pious wind took it away.

N2898: Saumaise, by his pamphlet *Défense de Charles I.*, drew out Milton's *Defense of the English People*. A French writer said of him: "Aujourd'hui on ne connaît plus Claude de Saumaise que de certaines discussions beaucoup trop retentissantes qu'il eut avec plusieurs de ses contemporains;" and adds, regarding the *Défense de Charles I.*, "Saumaise y défendit fort mal une fort bonne cause, et le poète eut raison du critique."

N2899: Journal, 1841. "I think that Milton wrote his verse to his own ear, well knowing that England did not hold, and might not for a century, another ear that could hear their rhythm. That is the magnanimity of a poet, that he writes for the Gods—as those Egyptian obelisks which Goethe saw raised from the ground at Rome, were carved with the utmost finish on the upper surface, which faced the heaven and which man was never to see."

N2900: Master Samuel Hartlib, apparently a scholar from the continent, a friend of Milton, who speaks of him as "sent hither from a far country," seems to have studied with peculiar diligence the science of education. Milton's letter to him is "On Education."

N2901: Journal, 1845. "The language is made,—who has not helped to make it? Then come Milton, Shakspeare, and find it all made to their hand, and use it as if there never had been language before."

N2902: From an early college poem of Milton, "Anno Ætatis XIX." "At a Vacation Exercise at the College, part Latin, part English, the Latin speeches ended, the English thus began, 'Hail, native language!'" etc.

N2903: From "L' Allegro."

N2904: As is evident throughout this essay, Mr. Emerson was drawn to Milton by the likeness of their characters and tastes, as well as their ideals. He himself loved temperance "for its elegance, not for its austerity," as he says of the Hero (*Essays, First Series*, p. 254). His temperance was of the unconscious kind, a part of his refined taste.

N2905: The young Emerson, as his letters to his brothers during his college course show, was sometimes writing his thoughts and attempts at verse, at his high desk, before winter daylight had fully come.

N2906: From Wordsworth's sonnet beginning,

"Milton, thou should'st be living at this hour."

N2907: Journal, 1836. "With what satisfaction I read last night with G. P. B[radford] some lines from Milton! In Samson Agonistes and elsewhere with what dignity he felt the office of the bard, the solemn office borne by the great and grave of every age for the behoof of all men; a call which never was heard in the frivolous brains of the Moores and Hugos and Bérangers of the day."

N2908: Compare with this a remarkable passage in "Aristocracy" (*Lectures and Biographical Sketches*, p. 63).

N2909: It was Mr. Emerson's religious feeling that kept him away from the preachings and prayers of his day.

N2910: *Paradise Lost*, book iv., 301.

N2911: *Paradise Lost*, book iv., 361.

ART AND CRITICISM

THE MANUSCRIPT of the lecture has on it the name "Art and Criticism," but it is incomplete, and nearly the first quarter is missing. This was presumably upon Art (to judge by some few notes which remain), and very likely the essay "Art," in *Society and Solitude*, contains much of the matter.

"Art and Criticism" was the fourth lecture in a course given in the spring of 1859, at the Freeman Place Chapel in Boston.

N2912: The *Néant*, the Negative aspect of the Universe.

N2913: Mr. Cabot was told that the congregation to which Mr. Emerson preached in the Second Church of Boston was composed mainly of middle-class people. His hearers at the church in East Lexington were simple people, but, in confessing this, they said that they could understand Mr. Emerson. Most of his lectures for forty years thereafter were "tried on," as he said, on audiences from farm and shop in the lyceums of New England towns or on enterprising but uncultivated settlers of "the West." He would not "talk down," but made it his business to try to give them his

best thought in vigorous, simple words, with homely illustration or classic anecdote.

N2914: The street as a school for the orator is treated of in "Eloquence" (*Letters and Social Aims*, pp. 124, 125).

N2915: *Vathek*, the hero of an Eastern romance published by Beckford in 1787.

N2916: Mr. Emerson took much pleasure in Burn's poem "To the Deil."

N2917: Here follows a passage on the necessity of shade to balance sun, etc., printed in "Considerations by the Way" (*Conduct of Life*, p. 255).

N2918: Mr. Emerson well understood the force of the pause. After an important passage, delivered forcibly or searchingly, he made a marked pause to allow the thought to strike in; then with great flexibility of voice would begin the next paragraph in a quiet conversational tone. In preparing a lecture for publication as an essay it was unsparingly pruned, not merely of passages but of words.

N2919: For "development" Mr. Emerson often used the more pleasing and picturesque "unfolding." As for the "family of *fero*" and its participle *latum*, he would rather say "choice" than "preference," "give way" than "defer," "gather" than "infer," "bring together" than "collate," "render" than "translate," with a poet's preference for simple rather than pedantic words.

N2920: He objected to the Germanic "*standpoint*, for the English *point of view*, recently corrupted into view-point."

N2921: It is the cheap use of these words that is blamed. "Flamboyant" is advisedly used by Mr. Emerson a few paragraphs earlier in this lecture.

N2922: A writer in a recent New York newspaper, who remembered this lecture, said of this characteristic illustration drawn from New England country life, "This searching criticism, enforced by a metaphor borrowed from the universal experience of the rude New England climate, is of the essence of the man. The more he is studied, the more—again in Yankee phrase—we summer and winter with him, the more we get from him. The foundations of his fun and earnest are also below the frost."

I cannot deny myself the pleasure of here introducing another reminiscence by the same writer illustrating Mr. Emerson's humor:—

"The present writer recalls a lecture in the middle sixties, in which Mr. Emerson surprised his audience into laughter with the closing of what seemed about to be an especially lofty appeal: 'If we could only make up our minds always to tell the truth, the whole truth, and nothing but the truth,' he said, in his musical and curiously impersonal voice, and added—'to what embarrassing situations it would give rise.'"

N2923: Of course in commending "writing down" Mr. Emerson meant simple subject and style, not deliberate lowering of thought to the supposed standard of others.

N2924: Mr. Emerson is here telling of the humors of his friend William Ellery Channing, as they walked in Concord Woods. In the

essay on Concord Walks, his company is extolled. Mr. Emerson had love of wild nature, Mr. Channing opened his eyes to what was artistic, and helped him to perception of color and composition.

N2925: Hence the denier and the pessimist were offensive to him: "Nothing good that way, everything good the other way." See in "Demonology" (*Lectures and Biographical Sketches*, p. 24) the application of "the infallible test, the state of mind in which much notice of them [alleged spiritualistic revelations, necromancy, etc.] leaves us."

THOUGHTS ON MODERN LITERATURE

THIS PAPER was the leading article in the second number of the *Dial* (October, 1840), of which Mr. Emerson was then editor.

The original opening pages, omitted by Mr. Cabot, are given below, excepting a few sentences.

"There is no better illustration of the laws by which the world is governed than Literature. There is no luck in it. It proceeds by Fate. Every scripture is given by the inspiration of God. Every composition proceeds out of a greater or less depth of thought, and this is the measure of its effect. The highest class of books are those which express the moral element; the next, works of imagination; and the next, works of science;—all dealing in realities,—what ought to be, what is, and what appears. These, in proportion to the truth and beauty they involve, remain; the rest perish. They proceed out of the silent, living mind to be heard again by the living mind. Of the best books it is hardest to write the history. Those books which are for all time are written indifferently at any time. For high genius is a day without night, a Caspian Ocean which hath no tides. And yet is literature in some sort a creature of time. Always the oracular soul is the source of thought, but always the occasion is administered by the low mediation of circumstances. Religion, Love, Ambition, War, some fierce antagonism, or it may be some petty annoyance, must break the round of perfect circulation, or no spark, no joy, no event can be. The poet, rambling through the fields or the forest, absorbed in contemplation to that degree that his walk is but a petty dream, would never awake to precise thought, if the scream of an eagle, the cries of a crow or curlew near his head did not break the sweet continuity. Nay, the finest lyrics of the poet come of this unequal parentage; the imps of matter beget such child on the soul, fair daughter of God. Nature mixes facts with thoughts to yield a power. But the gift of immortality is of the mother's side. In the spirit in which they

are written is the date of their duration, and never in the magnitude of the facts. Everything lasts in proportion to its beauty. In proportion as it was not polluted by the wilfulness of the writer, but flowed from his mind after the divine order of cause and effect, it was not his, but Nature's, and shared the sublimity of the sea and sky. That which is truly told, Nature herself takes in charge against the whims and injustice of men. For ages Herodotus was reckoned a credulous gossip in his descriptions of Africa, and now the sublime, silent desert testifies through the mouths of Bruce, Lyon, Caillaud, Burckhardt, Belzoni, to the truth of the calumniated historian.

"And yet men imagine that books are dice and have no merit in their fortune; that the trade and favor of a few critics can speed one book into circulation and kill another; and that in the production of these things the author has chosen and may devise to do thus and so. Society also wishes to assign subjects and methods to its writers. But neither reader nor author may intermeddle. You cannot reason at will in this and that other vein, but only as you must. You cannot make quaint combinations and bring to the crucible and alembic of truth things far-fetched or fantastic or popular, but your method and your subject are foreordained in your nature and in all nature or ever the earth was, or it has no worth. All that gives currency still to any book, advertised in the morning's newspaper in London or Boston, is the remains of faith in the breasts of men that, not adroit book-makers, but the inextinguishable soul of the universe, reports of itself in articulate discourse to-day as of old. The ancients strongly expressed their sense of the unmanageableness of these words of the spirit by saying that the God made his priest insane, took him hither and thither, as leaves are whirled by the tempest. But we sing as we are bid. Our inspirations are manageable and tame. Death and sin have whispered in the ear of the wild horse of Heaven, and he has become a dray and a hack. And step by step with the entrance of this era of ease and convenience, the belief in the proper Inspiration of man has departed...."

Here followed a passage on the Bible and the Scriptures of the nations, and the secondary quality of Shakspeare compared to these, much of which, quoted from the journal of 1839, is given in a note to the essay on Shakspeare. (*Representative Men*, p. 357.)

"All just criticism will not only behold in literature the action of necessary laws, but must also oversee literature itself. The erect mind disparageth all books. What are books? it saith: they can have no permanent value. How obviously initial they are to their authors. The books of the nations, the universal books, are long ago forgotten by those who wrote them, and one day we shall forget this primer learning. Literature is made up of a few ideas and a few fables. It is a heap of nouns and verbs enclosing an intuition or two. We must learn to judge books by absolute standards. When we are aroused to a life in ourselves, these traditional splendors of letters grow very pale and cold. Men seem to forget that all literature is ephemeral, and unwillingly entertain the supposition of its utter disappearance. They deem not only letters in general, but the best books in particular, parts of a preëstablished harmony, fatal, unalterable, and do not go behind Virgil and Dante, much less behind Moses, Ezekiel and Saint John. But no man can be a good critic of any book who does not read it in a wisdom which transcends the instructions of any book, and treats the whole extant product of the human intellect as only one age revisible and reversible by him."

N2926: Here follows a paragraph, telling with what eagerness the new generation studies the history of freedom in civil, religious and philosophic matters, and also the rude poetry of antiquity; then how it "celebrates its wants, achievements and hopes." "The time is marked by the multitude of writers. Soldiers, sailors, servants, nobles, princes, women, write books. The progress of trade and the facilities for locomotion have made the world nomadic again....

All facts are exposed. Let there be no ghost-stories more....Let us have charts true and gazetteers correct. We will know where Babylon stood, and settle the topography of the Roman Forum. We will know whatever is to be known of Australasia, of Japan, of Persia, of Egypt, of Timbuctoo, of Palestine....

"Christendom has become a great reading-room....The age is well-bred, knows the world, has no nonsense, and herein is well distinguished from the learned ages that preceded ours. [He alludes to the superstitions that filled the heads of the English and European scholars for the half-millennium that preceded the eighteenth century.] The best heads of this time build or occupy such card-house theories of religion, politics and natural science as a clever boy now would blow away. What stuff in Kepler, in Cardan, in Lord Bacon. Montaigne with all his French wit and downright sense is little better; a sophomore would wind him round his finger. Some of the Medical Remains of Lord Bacon in the book for his own use, 'Of the Prolongation of Life,' will move a smile in the unpoetical practitioners of the Medical College. [He then gives amusing citations from Bacon and Cardan and odd anecdotes from Burton's *Anatomy of Melancholy*.]

"All this sky-full of cobwebs is now forever swept clean away. Another race is born. Humboldt and Herschel, Davy and Arago, Malthus and Benham have arrived. If Robert Burton should be quoted to represent the army of scholars who have furnished a contribution to his moody pages, Horace Walpole, whose letters circulate in the libraries, might be taken with some fitness to represent the spirit of much recent literature. He has taste, common sense, love of facts, impatience of humbug, love of history, love of splendor, love of justice, and the sentiment of honor among gentlemen: but no life whatever of the higher faculties, no faith, no hope, no aspiration, no question concerning the secret of Nature.

"The favorable side of this research and love of facts is the bold and systematic criticism which has appeared in every department of literature.

From Wolff's attack upon the authenticity of the Homeric Poems dates a new impulse on learning...Niebuhr has sifted Roman history by the like methods. Heeren has made good essays towards ascertaining the necessary facts in the Grecian, Persian, Assyrian, Egyptian, Ethiopic, Carthaginian nations. English history has been analyzed by Turner, Hallam, Brodie, Lingard, Palgrave. Goethe has made the circuit of human knowledge, as Lord Bacon did before him, writing True or False on every article. Bentham has attempted the same scrutiny in reference to Civil Law. Pestalozzi, out of a deep love, undertook the reform of education. The ambition of Coleridge in England embraced the whole problem of Philosophy; to find, that is, a foundation in thought for everything that existed in fact. The German philosophers Schelling, Kant, Fichte, Hegel, have applied their analysis to Nature and thought with an antique boldness. There can be no honest inquiry which is not better than acquiescence....

"This skeptical activity, at first directed on circumstances and historical views deemed of great importance, soon penetrated deeper than Rome or Egypt, than history or institutions or the vocabulary of metaphysics, namely, into the thinker himself and into every function he exercises."

From this point on, the paper in the *Dial* is like that here printed, except that Mr. Emerson's corrections, pencilled on the margin, have been adopted here in the text, as well as in the omitted passages given above.

N2927: Mr. Emerson's use of his own life in his journals, and hence in his works, was of this sort. Incidents are generalized and personality merged in a type. In the poetry, often intimate personal experiences are used, but purified and adorned. Dr. Holmes treats of this matter with charming wit in his chapter on Emerson as a Poet.

N2928: In a lecture in a course on English Literature in 1835, Mr. Emerson said of Byron: "He has a marvellous power of language, but, from pride and selfishness, which made him an incurious observer, it lacked food. One's interest dies from famine of meaning. Cursing will soon be sufficient in the most skilful variety of diction. Of Scott it would be ungrateful to speak but with cheerful respect, and we owe to him some passages of genuine pathos. But in general, what he contributes is not brought from the deep places of the mind, and of course cannot reach thither." In a lecture in 1861, he said, "Byron had declamation, he had delicious music, but he knew not the mania which gives creative power."

N2929: In a lecture, "Books," in 1864, Mr. Emerson said: "I read lately with delight a casual notice of Wordsworth in a London journal, in which with perfect aplomb his highest merits were affirmed, and his unquestionable superiority to all English poets since Milton. I thought how long I travelled and talked in England, and found no person, or only one (Clough), in sympathy with him and admiring him aright, in face of Tennyson's culminating talent and genius in melodious verse. This rugged countryman walks and sits alone for years, assured of his sanity and inspiration, sneered at and disparaged, yet no more doubting the fine oracles that visited him than if Apollo had visibly descended to him on Helvellyn. Now, so few years after, it is lawful in that obese England to affirm unresisted the superiority of his genius."

N2930: In the last lecture in a course on New England, read in New York in 1843, Mr. Emerson said: "The influence of Wordsworth, Coleridge and Carlyle found readier reception here than at home. It is remarkable that we have our intellectual culture from one country and our duties from another....But there is an ethical

element in the mind of our people that will never let them long rest without finding exercise for the deeper thoughts. It very soon found both Wordsworth and Carlyle insufficient."

N2931: In the journal for 1838 occurs this passage:—

"Goethe hates dissection, hates the sundering a thing from the universal connection of Nature, and you shall see that love of synthesis working in all his rhetoric. As when he apostrophizes Erwin of Steinbach and his Minister, he sees all the Netherlands and all the year."

N2932: This suggests the passage in "Aristocracy" (*Lectures and Biographical Sketches*, pp. 63, 64) on the selfish man of learning who is not faithful to his duties to humble humanity around him.

N2933: I am unable to find the sources of the lines quoted on this and on the following page.

WALTER SAVAGE LANDOR

THIS PAPER appeared in the *Dial* for October, 1841. It was eight years since Mr. Emerson had had the pleasure of visiting Landor at his Villa Gherardesca at Fiesole, by his invitation. The opportunity of seeing Landor, Coleridge, Carlyle and Wordsworth reconciled him to travel, always a matter of indifference to him, at that sad time. In the first pages of *English Traits*, an account of this visit and Landor's conversation and opinions is given, which called out from Landor an "Open Letter" some years later. The account of this letter, with extracts from it, may be found in the notes^{N0902} to *English Traits*.

N2934: From Tennyson's "Lotus Eaters."

N2935: Compare a similar passage in the "Lecture on the Times" (*Nature, Addresses and Lectures*, p. 280).

N2936: In these sentences on Landor, Mr. Emerson also states his own theory and practice.

N2937: The article in the *Dial* is followed by a few pages of selections made by Mr. Emerson from Landor's writings.

PRAYERS

THIS PAPER was printed in the *Dial* for July, 1842.

The remarkable prayer in verse, "Great God, I ask thee for no meaner pelf," etc., was Henry Thoreau's. It is thought by a friend of the Thoreau family that the prayers preceding and following it were written by his loved brother John, who had died a few months before the publication of this paper. Nothing is known of the "deaf and dumb boy."

N2938: From *Measure for Measure*, Act II., Scene 2.

AGRICULTURE OF MASSACHUSETTS

THIS PAPER, reprinted exactly from the *Dial* of July, 1842, is Mr. Emerson's rendering—much affected by the medium through which it passed—of the sensible criticism on the Report of the State Commissioner of Agriculture, made by his friend and neighbor, Mr. Edmund Hosmer. Mr. Hosmer was a farmer of the old New England type, versed in agricultural and domestic economics, and was the oracle constantly consulted by Mr. Emerson, and the ally called in, in dealing with the interesting but to him puzzling management of his increasing acres. Mr. Hosmer and his oxen are the Hassan and the camels of the third stanza in the "Fragments on the Poet," in the *Poems*. He used to attend and join in the conversations of the philosophers at Mr. Emerson's house.

EUROPE AND EUROPEAN BOOKS

THIS PAPER, as printed, is that published in the *Dial* for April, 1843, with the exception of the opening pages, most of which are here given, omitting, however, the first paragraph, on the temporary dominations of European books, and prophesying a new world literature. The review thus continues:—

"But at present we have our culture from Europe and Europeans. Let us be content and thankful for these good gifts for a while yet. The collections of art, at Dresden, Paris, Rome, and the British Museum and libraries offer their splendid hospitalities to the American. And beyond this, amid the dense population of that continent, lifts itself ever and anon some eminent head, a prophet to his own people, and their interpreter to the people of other countries. The attraction of these individuals is not to be resisted by theoretic statements.

"It is true there is always something deceptive, self-deceptive in our travel. We go to France, to Germany, to see men, and find but what we carry. A man is a man, one as good as another, many doors to one open court, and that open court as entirely accessible from our private door, or

through John or Peter, as through Humboldt and Laplace. But we cannot speak to ourselves.

"We brood on our riches, but remain dumb; that makes us unhappy; and we take ship and go man-hunting in order, by putting ourselves *en rapport*, according to laws of personal magnetism, to acquire speech or expression. Seeing Herschel or Schelling, or Swede or Dane, satisfies the conditions, and we can express ourselves happily.

"But Europe has lost weight lately. Our young men go thither in every ship, but not as in the golden days, when the same tour would show the traveller the noble heads of Scott, of Mackintosh, Coleridge, Wordsworth, Goethe, Cuvier, and Humboldt. We remember, when arriving in Paris, we crossed the river on a brilliant morning, and at the book-shop of Papinot, in the Rue de Sorbonne, at the gates of the University, purchased for two sous a Programme, which announced that every Monday we might attend the lecture of Dumas on Chemistry at noon; at a half hour later either Villemain or Ampère on French Literature; at other hours, Guizot on Modern History; Cousin on the Philosophy of Ancient History; Fauriel on Foreign Literature; Prévost on Geology; Lacroix on the Differential Calculus; Jouffroy on the History of Modern Philosophy; Lacretelle on Ancient History; Desfontaines or Mirbel on Botany.

"Hard by, at the Place du Panthéon, Dégérando, Royer Collard, and their colleagues were giving courses on Law, on the law of nations, the Pandects and commercial equity. For two magical sous more, we bought the Programme of the Collège Royal de France, on which we still read with admiring memory, that every Monday, Silvestre de Sacy lectures on the Persian Language; at other hours, Lacroix on the Integral Mathematics; Jouffroy on Greek Philosophy; Biot on Physics; Lermnier on the History of Legislation; Élie de Beaumont on Natural History; Magendie on Medicine; Thénard on Chemistry; Binet on Astronomy; and so on, to the end of the week. On the same wonderful ticket, as if royal munificence had not yet sufficed, we learned that at the Museum of Natural History, at the Garden

of Plants, three days in the week, Brongniart would teach Vegetable Physiology, and Gay-Lussac, Chemistry, and Flourent, Anatomy. With joy we read these splendid news in the Café Procope, and straightway joined the troop of students of all nations, kindreds and tongues, whom this great institution drew together to listen to the first *Savans* of the world without fee or reward. The professors are changed, but the liberal doors still stand open at this hour. This royal liberality, which seems to atone for so many possible abuses of power, could not exist without important consequences to the student on his return home.

"The University of Göttingen has sunk from its high place by the loss of its brightest stars. The last was Heeren, whose learning was really useful and who has made ingenious attempts at the solution of ancient historical problems. Ethiopia, Assyria, Carthage and the Theban Desert are still revealing secrets, latent for three millenniums, under the powerful night-glass of the Teutonic Scholars, who make astronomy, geology, chemistry, trade, statistics, medals, tributary to their Inquisitions.

"In the last year also died Sismondi, who by his *History of the Italian Republics* reminded mankind of the prodigious wealth of life and event, which Time, devouring his children as fast as they are born, is giving to oblivion in Italy, the piazza and forum of History, and for a time made Italian subjects of the middle ages popular for poets and romancers, and by his kindling chronicles of Milan and Lombardy perhaps awoke the great genius of Manzoni. That history is full of events, yet, as Ottilie writes in Goethe's novel, that she never can bring away from history anything but a few anecdotes, so the *Italian Republics* lies in the memory like a confused *mélée*, a confused noise of slaughter and rapine, and garments rolled in blood. The method, if method there be, is so slight and artificial, that it is quite overlaid and lost in the unvaried details of treachery and violence. Hallam's sketches of the same history were greatly more luminous and memorable, partly from the advantage of his design, which compelled

him to draw outlines, and not bury the grand lines of destiny in municipal details.

"Italy furnished in that age no man of genius to its political arena, though many of talent, and this want degrades the history. We still remember, with great pleasure, Mr. Hallam's fine sketch of the external history of the rise and establishment of the Papacy, which Mr. Ranke's voluminous researches, though they have great value for their individual portraits, have not superseded."

N2939: Mr. Emerson's impatience of Wordsworth's foibles was at first great. In the journal for 1832 he wrote:—

"I never read Wordsworth without chagrin. A man of such great powers and ambition, so near to the *Dii majores*, to fail so meanly in every attempt. A genius that hath epilepsy, a deranged archangel."

N2940: Mr. Emerson gave an account of his visits to Wordsworth in 1833, and again in 1848, in *English Traits* (pp. 19ff. and 294.)

N2941: Soon after Tennyson's poems appeared, Mr. Emerson wrote to a friend:—

"I think Tennyson got his inspiration in gardens, and that in this country, where there are no gardens, his musky verses could not be written. The Villa d' Este is a memorable poem in my life."

N2942: Mr. Alexander Ireland of Manchester, England, the friend who made arrangements for Mr. Emerson's coming to England to lecture in 1828, gives in his Memoir¹³³ an account of Mr. Emerson's visit to Leigh Hunt.

¹³³ Ralph Waldo Emerson, *His Life, Genius, and Writings*. London: Simpkin, Marshall & Co.

N2943: Mr. Emerson prized Tennyson more highly as years went on.

Journal, 1853. "When I see the waves of Lake Michigan toss in the bleak snowstorm, I see how small and inadequate the common poet is. But Tennyson with his eagle over the sea has shown his sufficiency."

In the summer of 1868, he wrote at some length in his journal in high praise of the quality and elevation of the poem "The Holy Grail," and, looking over the journal two years later, added more to the same effect. Below these notes he wrote in October, 1871: "The only limit to the praise of Tennyson as a lyric poet is that he is alive. Were he an ancient, there would be none."

N2944: In *English Traits* Mr. Emerson wrote:—

"Bulwer, an industrious writer, with occasional ability, is distinguished for his reverence of intellect as a temporality, and appeals to the worldly ambition of the student. His romances tend to fan these low flames."

N2945: In his chapter on Goethe, *Wilhelm Meister* is criticised. (*Representative Men*, pp. 277, 278.)

N2946: Disraeli's novel is alluded to in the pages in *Representative Men* just referred to.

PAST AND PRESENT

N2947: This celebration of his friend's work was published by Mr. Emerson in the *Dial* for July, 1843.

N2948:

For Genius made his cabin wide,
And Love led Gods therein to bide.

"Fragments on the Poet," *Poems*, Appendix.

N2949: Now and then Mr. Emerson grew weary of his friend's personality in his work, as when he exclaimed:—

"O Carlyle, the merit of glass is not to be seen, but to be seen through; whereas every lamina and spicule of the Carlyle glass is visible!"

N2950: Mr. Charles J. Woodbury, comparing Carlyle and Emerson, says:—

"Neither could tolerate insincerity, which they destroyed, one with lightning, and the other with light."¹³⁴

In his journal of 1863, Mr. Emerson said of Carlyle's style:—

"It is like the new Parrott guns. There were always guns and powder. But here to-day are latest experiments and a success which exceeds all previous performance in throwing far, and in crushing effect. Much is sacrificed for this, but this is done—so with Carlyle's projectile style."

N2951: In his English note-book, Mr. Emerson called Carlyle "a bacchanal in the strong waters of vituperation."

N2952: In sending this book to Emerson, Carlyle wrote: "I have finished a book,...one solid volume;...it is a somewhat fiery and questionable 'Tract for the Times,' not by a Puseyite, which the terrible aspect of things here has forced from me." Mr. Emerson in his reply praised "the deep, steady tide taking in, either by hope or by fear, all the great classes of society,—and the philosophic minority also, by the powerful lights which are shed on the phenomenon. It is true contemporary history, which other books are not, and you have fairly set solid London city aloft, afloat, in bright mirage of the air. I quarrel only with the popular assumption, which is perhaps a condition of the Humor itself, that the state of society is a new state, and was not the same thing in the days of Rabelais and Aristophanes as of Carlyle. Orators always allow something to masses, out of love to their own art, whilst austere philosophy will only know the particles. This were of no importance if the historian did not so come to mix himself in some

¹³⁴ *Talks with Emerson*. Baker and Taylor Co., New York, 1890.

manner with his erring and grieving nations, and so saddens the picture; for health is always private and original, and its essence is in its unmixableness."

Five months later, October 31, 1843, Carlyle wrote:—

"In this last number of the *Dial*,...I found one little essay, a criticism on myself,—which, if it should do me mischief, may the Gods forgive you for! It is considerably the most dangerous thing I have read for some years. A decided likeness of myself recognizable in it, as in the celestial mirror of a friend's heart; but so enlarged, exaggerated, all *transfigured*,—the most delicious, the most dangerous thing! Well, I suppose I must try to assimilate it also, to turn it also to good, if I be able. Eulogies, dyslogies, in which one finds no features of one's own natural face, are easily dealt with,...but here is another sort of matter!...May the gods forgive you!—I have purchased a copy for three shillings and sent it to my Mother, one of the indubitablest benefits I could think of in regard to it."

A LETTER

THE POSITION of Editor of the *Dial* must have been trying to one like Mr. Emerson, who joined to sympathy with young idealists and wish to foster "divine discontent," a high standard of thought and expression, a dislike for the negative, and a New England common sense.

So he wrote to disappointed contributors, or those restless seekers who asked for counsel, this wholesome circular letter, which ended by referring each to the oracle within which he or she neglected in seeking help abroad.

The "Letter" was published in the *Dial* for October, 1843.

N2953: In the *Dial* the letter ends by referring to a correspondent who had sent in a generous and just tribute to Bettine von Arnim, and giving a translation from the *Deutsche Schellpost* "of a sketch, though plainly from no very friendly hand, of the new work of that eminent lady, who, in the silence of Tieck and Schelling, seems to hold a monopoly of genius in Germany."

THE TRAGIC

THIS LECTURE, under the name "Tragedy," was the seventh in a course on Human Life given by Mr. Emerson in Boston in the winter of 1838–39. The eighth lecture was "Comedy," included among the lectures which Mr. Cabot gathered for him into the volume *Letters and Social Aims*, when Mr. Emerson's failing strength required such aid. "The Tragic," for so the name was altered, was printed by Mr. Emerson in the last number of the *Dial*, April, 1844.

It was a subject quite foreign to Mr. Emerson's habit of mind, but one which his serene faith could dispose of and bring, as he would have said, "within the sphere."

N2954: The subject of Fate is treated at length in the Essay of that name in *Conduct of Life*. In the poem "Worship," the motto to the Essay on that theme, Fate, miscalled, is represented as beneficent, living Law.

N2955: From a song by Donne, beginning:—

"Sweetest love, I doe not goe."

N2956: Isaiah, xxx., 7.

N2957: The serenity and composure of Mr. Emerson's venerable friend Samuel Hoar were such that Mr. Emerson wrote of him in his journal:—

"I know a man who tries time."

N2958: The doctrine of the "Compensation," in the first series of *Essays*.

N2959: As modesty is the cardinal virtue of woman, so Mr. Emerson held that

"Composure
Is the pudency of man."

"The Poet," *Poems*, Appendix.

GENERAL INDEX

THE FOLLOWING list gives the titles of the volumes to which the Roman numerals in this Index refer:—

I: Nature, Addresses and Lectures.

II: Essays, First Series.

III: Essays, Second Series.

IV: Representative Men.

V: English Traits.

VI: Conduct of Life.

VII: Society and Solitude.

VIII: Letters and Social Aims.

IX: Poems.

X: Lectures and Biographical Sketches.

XI: Miscellanies.

XII: Natural History of Intellect.

GENERAL INDEX

[Titles of Essays and Poems are printed in SMALL CAPITALS.]

- Abandonment, no greatness without, **VII:049**, **VII:181**; the way of life, **II:321**.
Abdel Kader, and Daumas, **VII:271**; on nobility, **VI:176**.
Able men, have respect for justice, **I:165**; ask only for ability, **IV:268**.
Abolition, bigot in, **II:051**; the church appears in, **III:251**; church hostile to, **X:114**; shadow of Clarkson, **II:061**; conventions, **II:135**; effect of, **XI:100**; transcendentalists and, **I:348**, **I:349**.
Abolitionist, every man an, **XI:250**, **XI:354**; farmer the true, **VII:141**; love the arch-, **XI:281**; made by slavery, **XI:281**.
Aboriginal man, not engaging, **VIII:270**.
Aboriginal power, **II:358**; **VI:072**.
Aboriginal races, incapable of improvement, **XII:026**.
Aboriginal, the State not, **III:199**.
Absolute and relative, **IV:149**.
Absolve you to yourself, **II:050**.
Abstemious, of criticism, **VII:180**; spirit's teachings are, **IV:139**.
Abstemiousness, quiddling, **VI:154**.
Abstinence, **I:215**, **I:251**.

Abstract truth, **II:326, II:331.**

Abstraction, of scholars, **VI:156; VIII:288.**

Abstractionists, Nature furnishes, **III:237; IV:154, IV:155.**

Absurdity, difference from me, the measure of, **IV:024.**

Abu Ali Seena, **IV:095.**

Abu Taleb, **VI:273; IX:302.**

Abul Khain, **IV:095.**

Abury, temple at, **V:278, V:281.**

Abuses, block ways to employments, **I:234.**

Abyss, replies to abyss, **VII:171; of being, II:121; IV:086.**

Accidents, not to be feared, **VI:232; insurance office increases, II:085; there are no, VII:132; lovely, of Nature, III:231; resisting, VI:024.**

Accomplishments, **VI:143; of the scholar, X:278.**

Accuracy, essential to beauty, **X:147.**

Achievement, power of, **X:277; not computed by time, II:317.**

Achilles, in every nation, **VII:255; vulnerable, II:107.**

Achromatic lens, needful to see reality, **X:166.**

Acorn, thousand forests in one, **II:004.**

Acquaintances, high, the great happiness of life, **VII:306.**

Acquainted, be not too much, **III:137.**

Acre, cleave to thine, **VI:244; my, IX:143.**

Acres, black, of the night, **IX:342; mystic fruit, IX:145; sitfast, IX:036.**

Acrostic, a character like, **II:058, II:148.**

Action, Actions, honest and natural agree, **II:058; preëxist in the actor, III:097; not over-doing and busy-ness, X:267; not cowed by the name of, II:163; dispose to greater conclusions, III:194; tends to diversity, IV:051; of infinite elasticity, II:164; not rashly explained, III:108; in life, few, XII:412; future not to be decided beforehand, XI:169; what are called good, II:053; great do not let us go behind them, II:250; heroic, are beautiful, I:019; not indifferent, II:120, II:317; independent, rare, X:229; their influence not measured by miles, III:074; inscribe themselves, IV:261; integrate themselves, II:102;**

- intellectual quality, **VI:158**; we put our life in, **II:101**; magnetism of, **II:063**; leave no mark in the world, **I:278**; measured by depth of sentiment, **II:155**; **IV:268**; mechanical, **II:135**; men of, **IV:267**; men wanted more than, **I:278**; and misaction, **X:268**; original, necessary, **X:267**; natural, **I:019**; every necessary action pleases, **VI:291**; Nelson on, **VIII:308**; are pearls to discourse, **I:095**; need perspective, **II:005**; picture-book of creed, **VIII:023**; a great pleasure, **VII:038**; is prayer, **II:077**; reaction, **II:096**; resounding, **III:041**; a resource, **I:098**; satellites to Nature, **I:039**; essential to scholar, **I:094**; self-rewarding, **II:102**; we shrink from actions of our own, **XI:521**; is in silent moments, **II:161**; right speech not distinguished from, **VIII:095**; spontaneous, strong, **II:138**, **II:328**; **III:047**, **III:068**; steps in ladder, **II:305**; subject for sculpture, **VII:130**; should rest on substance, **III:101**; partiality, the tax on, **IV:266**; timely, **II:228**; and thought, **I:272**; **IV:266**; **VII:038**; transfigured as thoughts, **I:096**; a trick of the senses, **II:163**; not better than verses or pictures, **XII:343**; unconscious, **VII:038**; give vocabulary, **I:097**; give a return of wisdom, **I:098**; **II:227**.
- Activity, amiable, **X:047**; children and thoughtless people like, **X:174**; contagious, **IV:013**; frivolous, **X:267**; too great, **VII:312**; miscellaneous, to be stopped off, **VI:073**; makes room for itself, **V:031**.
- Actors, worst provincial excels amateur, **VI:077**.
- Actual, dwarfish, **I:285**; Goethe, poet of, **XII:329**, **XII:331**; ideal truer than, **XII:330**; the imposing, **XI:163**; modern regard for, **XII:249**; necessary use of, **I:305**.
- Adam, age, **IX:339**; hide ourselves as, **III:135**; Milton's, **XII:274**, **XII:275**; every man a new, **I:076**; **X:137**; perfect, **IX:223**, **IX:283**.
- Adamant, of Nature, **I:169**; passes into smoke, **VII:145**; **X:070**; England moves on a splinter of, **V:063**; wax to artist, **II:360**; **IX:069**.
- Adamantine, bandages, **VI:017**; government, **III:267**; limitations, **IV:137**; necessity, **VII:055**; syllable, **III:247**.
- Adamhood, **IX:026**, **IX:166**.
- Adamitic capacity, Webster in his, **XI:221**.

Adams, John, courage, **XII:203**; elevation, **VI:161**; fame, **XII:210**; old age, **VII:323**; patriotism, **X:248**; no backward-creeping crab, **XI:537**; visit to, **VII:332**.

Adams, John Q., **VI:175**; company for kings, **X:392**; courage, **XI:134**; eloquence, **II:060**; **VII:083**; audacious independence, **XI:521**; on literature, **VIII:123**; reading, **VIII:122**.

Adams, Samuel, **VII:116**.

Adaptation, none in man, **III:057**; the peculiarity of human nature, **IV:161**; **VIII:306**; of Nature, **VI:039**; we are victims of, **VI:139**.

Addition, the world not to be analyzed by, **II:339**.

ADIRONDACS, **IX:182–194**.

Adjustments, Nature's, **VI:037**.

Admetus, **II:031**; **VII:176**.

Admiration, strain to express, **VIII:086**; **X:306**; not forgiven, **XII:030**.

Adrastia, law of, **III:084**.

Adsched of Meru, **VIII:244**.

Adultery, **VI:011**.

Advance, the history of Nature, **VI:035**; **XI:525**; **XII:060**.

Advantage, has its tax, **II:120**; **XI:125**, **XI:186**.

Advantages, each envies those he has not, **VI:144**; cannot afford to miss, **X:069**.

Adventure, love of, **VI:068**; **XII:200**.

Adventurer, well received, **VI:211**.

Adversity, the prosperity of the great, **VI:233**; **VIII:231**.

Advertisement, most of life mere, **III:073**; **VII:290**.

Æolian Harp, **IX:237–241**; **IX:256**; dumb, **VIII:273**; in Nature, **III:172**, **III:175**; **VIII:287**; **IX:230**, **IX:322**; **X:129**; melancholy, **XII:406**.

Æolus, steam his bag, **I:013**.

Æons, **VI:083**; **VII:180**; **IX:115**, **IX:285**.

Aerolites, Shakspeare's, **IV:208**.

Æschylus, we are civil to, **VIII:067**; in earnest, **VII:053**; Eumenides, **III:082**; grandest of Greek tragedians, **VII:198**; counterpart in Scott's *Bride of Lammermoor*, **XI:465**; quoted, **II:106**; **XI:239**.

- Æsop, Lincoln an, **XI:333**; his price, **X:049**; knew the realities of life, **VI:261**; **VIII:003**; a man of the world, **V:147**.
- Æsop's Fables, **III:031**; **IV:201**; associate us, **I:123**; **VII:014**, **VII:015**.
- Affections, beauty, **I:099**; benefits, **VII:011**; exhilaration, **II:191**; geometric, **VIII:107**; Heraclitus said were colored mists, **II:326**; increases intellect, **II:192**; **VIII:228**; **XII:044**, **XII:061**; jets, **II:193**; and memory, **XII:099**, **XII:104**; metamorphosis, **II:193**; tent of a night, **II:188**; pathetic region of, **VI:316**; sweetness of life, **II:191**; make web of life, **VII:300**; essential to will, **VI:028**; woman's crown, **XI:412**.
- Affinities, in conversation, **II:207**; essential to man of the world, **III:125**; to great men, **IV:041**; between man and works, **XII:063**; neglect of, **II:151**; perception of, makes the poet, **I:054**; of persons, **II:052**; **VI:046**; range, **VI:137**; reciprocity, **VII:014**; of thoughts, **XII:023**; of virtue with itself in different persons, **II:195**; women's, **III:151**; world enlarged by, **VII:302**.
- Affirmative, being is, **II:121**; class, **VI:072**; forces, **VI:057**; good mind chooses, **VII:307**; **XII:061**; incessant, **VII:309**; love is, **VII:309**; **XII:061**; we love the, **IV:170**; in manners, etc., **VII:308**; philosophy, **X:244**; power, **X:234**, **X:235**; principle, **III:045**; sacred, **X:219**.
- Afraid, do what you are afraid to do, **II:260**; **X:406**.
- Afrasiyab, **VIII:242**.
- Africa, civilization, **XI:141**, **XI:145**. See Negro, Slavery.
- Africanization of U. S., **XI:298**.
- Afternoon men, **II:229**; saunterings, **I:163**.
- Agamemnon, **II:024**.
- Agaric, self-planting, **III:023**.
- Agassiz, Louis, **VIII:213**; **IX:193**; museum, **VIII:151**; theories, **VIII:007**; **XI:391**.
- Age, old. See Old Age.
- Age, the characteristics of different ages, **I:109**, **I:281**, **I:287**; of the present, the interest in familiar things, **I:110**, **I:271**; **VI:003**; **VIII:208**; of fops, **IX:207**; of gold, **III:087**; **IX:273**; of omnibus, **XI:538**; walks about in persons, **I:264**;

VI:039; of reason in a patty-pan, **X:364**; retrospective, **I:003**; riddle of, **VI:004**; of analysis, **X:326**; each, new, **X:254**; **XII:387**.

Ages, of belief, great, **VI:216**; **X:206**; equivalence of, **VIII:213**; instruct the hours, **II:004**; ideas work in, **XI:160**; not idle, **I:311**.

Agiochook, **I:170**; **IX:077**.

Agitation, blessed, **XI:533**.

Agitators, **I:285**.

Agricultural Report, **XII:360**.

Agriculture, praise of, **I:366**; attacks on, **I:252**; aids civilization, **VII:022**, **VII:151f**; **XI:034**; English, **V:095**, **V:189**; check on nomadism, **II:021f**; oldest profession, **I:240**; respect for, **I:235**, **I:381**; **VII:137**; steam in, **V:095**; thrift in, **II:234**. See Farming.

AGRICULTURE OF MASSACHUSETTS, **XII:358–364**.

Aids, casting off, **III:260**; **XI:235**, **XI:236**.

Aim, high, **I:216**; **III:185**, **III:268**; **VI:232**; **VIII:301**; **X:065**; aggrandizes the means, **VII:273**; men of, **X:039**; mind own, **IX:030**; want of, **VI:208**.

Air, artful, **IX:179**; influence on body and brain, **XII:140**, **XII:160**; exhalation, **XII:183**; fame, **IX:222**; food of life, **XII:183**; gifts, **X:070**; inspiration, **III:029**; intellectual, **VII:171**; effect on manners, **XII:183**; is matter subdued by heat, **VII:144**; full of men, **VI:017**; moral sentiment in, **I:042**; music, **III:008**; an ocean, **I:012**; receptacle, **VII:144**; of mountains, a good republican, **XII:183**; like a river, **I:044**; is Rock of Ages dissolved, **XII:141**; salubrity, **VI:243**; **IX:219**; coined into song, **II:176**; sounds, **XII:032**; useful and hurtful, **II:339**; forged into words, **I:040**; works for man, **VII:144**; worth, **X:276**.

Air-ball, thought, **VI:288**.

Air-bells, of fortune, **IX:231**.

Air-lord, poet, **III:042**.

Air-pictures, **III:221**.

Air-sown words, **IX:222**.

Airs, logs sing, **II:227**.

Airs, putting on, **XII:202**.

- Aisles, forest, **IX:045**; monastic, **IX:006**; of Rome, **IX:007**.
- Akhlak-y-Jalaly, **IV:040**.
- Aladdin's lamp, oil, **VIII:142**.
- Alarmists, **VI:061**.
- Alchemy, is in the right direction, **VI:282**.
- Alcibiades, **III:274**.
- Alcott, A. B., **X:376**.
- Alcuin, **IX:293**.
- Alderman, dreariest, **VI:312**.
- Alembert, Jean d', quoted, **VI:313**; **X:110**.
- Alembic of man, **I:024**; **VIII:016**.

Zymosis, **VIII:131**.

INDEX OF FIRST LINES: POEMS

- A dull uncertain brain, **IX:389**.
"A new commandment," said the smiling Muse, **IX:297**.
A patch of meadow upland, **IX:369**.
A queen rejoices in her peers, **IX:366**.
A ruddy drop of manly blood, **IX:274**.
A score of airy miles will smooth, **IX:341**.
A sterner errand to the silken troop, **IX:384**.
A subtle chain of countless rings, **IX:281**.
A train of gay and clouded days, **IX:349**.
Ah Fate, cannot a man, **IX:383**.
Ah, not to me those dreams belong! **IX:333**.
All day the waves assailed the rock, **IX:345**.
Alone in Rome. Why, Rome is lonely too, **IX:396**.
Already blushes on thy cheek, **IX:196**.
And as the light divides the dark, **IX:330**.
And Ellen, when the graybeard years, **IX:094**.
And I behold once more, **IX:385**.
And when I am entombed in my place, **IX:395**.
Announced by all the trumpets of the sky, **IX:041**.

Around the man who seeks a noble end, IX:349.
Ascending thorough just degrees, IX:356.
Askest, 'How long thou shalt stay?' IX:012.
As sings the pine-tree in the wind, IX:297.
As sunbeams stream through liberal space, IX:048.
As the drop feeds its fated flower, IX:355.
Atom from atom yawns as far, IX:339.
Be of good cheer, brave spirit; stead-fastly, IX:381.
Because I was content with these poor fields, IX:141.
Bethink, poor heart, what bitter kind of jest, IX:300.
Blooms the laurel which belongs, IX:209.
Boon Nature yields each day a brag which we now first behold, IX:294.
Bring me wine, but wine which never grew, IX:125.
Bulkeley, Hunt, Willard, Hosmer, Meriam, Flint, IX:035.
Burly, dozing humble-bee, IX:038.
But God said, IX:114.
But if thou do thy best, IX:356.
But Nature whistled with all her winds, IX:348.
But never yet the man was found, IX:339.
But over all his crowning grace, IX:329.
By fate, not option, frugal Nature gave, IX:137.
By the rude bridge that arched the flood, IX:158.
By thoughts I lead, IX:330.
Can rules or tutors educate, IX:273.
Cast the bantling on the rocks, IX:295.
Coin the day dawn into lines, IX:333.
Dark flower of Cheshire garden, IX:361.
Darlings of children and of bard, IX:343.
Daughter of Heaven and Earth, coy Spring, IX:163.
Daughters of Time, the hypocritic Days, IX:228.
Day by day for her darlings to her much she added more, IX:341.

Day by day returns, **IX:392**.
Day! hast thou two faces, **IX:232**.
Dear brother, would you know the life, **IX:391**.
Dearest, where thy shadow falls, **IX:301**.
Deep in the man sits fast his fate, **IX:197**.
Each spot where tulips prank their state, **IX:301**.
Each the herald is who wrote, **IX:080**.
Easy to match what others do, **IX:351**.
Ere he was born, the stars of fate, **IX:294**.
Ever the Poet _from_ the land, **IX:292**.
Ever the Rock of Ages melts, **IX:355**.
Every day brings a ship, **IX:217**.
Every thought is public, **IX:291**.
Fall, stream, from Heaven to bless; return as well, **IX:376**.
Farewell, ye lofty spires, **IX:258**.
Flow, flow the waves hated, **IX:287**.
For art, for music over-thrilled, **IX:330**.
For every God, **IX:330**.
For Fancy's gift, **IX:328**.
For Genius made his cabin wide, **IX:331**.
For joy and beauty planted it, **IX:340**.
For Nature, true and like in every place, **IX:338**.
For thought, and not praise, **IX:328**.
For what need I of book or priest, **IX:333**.
Forbore the ant-hill, shunned to tread, **IX:332**.
Freedom all winged expands, **IX:206**.
Friends to me are frozen wine, **IX:352**.
From fall to spring, the russet acorn, **IX:136**.
From high to higher forces, **IX:349**.
From the stores of eldest matter, **IX:356**.
From thy worth and weight the stars gravitate, **IX:303**.

Gifts of one who loved me, IX:283.
Give all to love, IX:090.
Give me truths, IX:139.
Give to barrows, trays and pans, IX:277.
Go if thou wilt, ambrosial flower, IX:355.
Go speed the stars of Thought, IX:283.
Go thou to thy learned task, IX:292.
Gold and iron are good, IX:271.
Good-bye, proud world! I'm going home, IX:003.
Grace, Beauty and Caprice, IX:276.
Gravely it broods apart on joy, IX:375.
Hark what, now loud, now low, the pining flute complains, IX:303.
Hast thou named all the birds without a gun? IX:083.
Have ye seen the caterpillar, IX:374.
He could condense cerulean ether, IX:332.
He lives not who can refuse me, IX:347.
He planted where the deluge ploughed, IX:332.
He took the color of his vest, IX:292.
He who has a thousand friends has not a friend to spare, IX:302.
He who has no hands, IX:291.
Hear what British Merlin sung, IX:218.
Henceforth, please God, forever I forego, IX:394.
Her passions the shy violet, IX:296.
Her planted eye to-day controls, IX:294.
High was her heart, and yet was well inclined, IX:291.
Him strong Genius urged to roam, IX:354.
His instant thought a poet spoke, IX:334.
His tongue was framed to music, IX:284.
Hold of the Maker, not the Made, IX:331.
How much, preventing God, how much I owe, IX:359.
I, Alphonso, live and learn, IX:025.

- I am not poor but I am proud, IX:380.
I am not wiser for my age, IX:295.
I am the Muse who sung alway, IX:220.
I bear in youth and sad infirmities, IX:381.
I cannot spare water or wine, IX:028.
I do not count the hours I spend, IX:249.
I framed his tongue to music, IX:330.
I grieve that better souls than mine, IX:327.
I have an arrow that will find its mark, IX:376.
I have no brothers and no peers, IX:332.
I have trod this path a hundred times, IX:368.
I heard or seemed to hear the chiding Sea, IX:242.
I hung my verses in the wind, IX:220.
I left my dreary page and sallied forth, IX:346.
I like a church; I like a cowl, IX:006.
I love thy music, mellow bell, IX:379.
I mourn upon this battle-field, IX:261.
I rake no coffined clay, nor publish wide, IX:382.
I reached the middle of the mount, IX:145.
I said to heaven that glowed above, IX:299.
I see all human wits, IX:296.
I serve you not, if you I follow, IX:082.
If bright the sun, he tarries, IX:334.
If curses be the wage of love, IX:358.
If I could put my woods in song, IX:229.
If my darling should depart, IX:300.
If the red slayer think he slays, IX:195.
Ill fits the abstemious Muse a crown to weave, IX:398.
Illusions like the tints of pearl, IX:348.
Illusion works impenetrable, IX:348.
In an age of fops and toys, IX:207.

In countless upward-striving waves, IX:283.
In Farsistan the violet spreads, IX:298.
In many forms we try, IX:359.
In May, when sea-winds pierced our solitudes, IX:037.
In my garden three ways meet, IX:370.
In the chamber, on the stairs, IX:350.
In the deep heart of man a poet dwells, IX:372.
In the suburb, in the town, IX:284.
In the turbulent beauty, IX:361.
In Walden wood the chickadee, IX:342.
It fell in the ancient periods, IX:013.
It is time to be old, IX:251.
Knows he who tills this lonely field, IX:363.
Let me go where'er I will, IX:365.
Let Webster's lofty face, IX:398.
Like vaulters in a circus round, IX:331.
Little thinks, in the field, yon red-cloaked clown, IX:004.
Long I followed happy guides, IX:085.
Love asks nought his brother cannot give, IX:353.
Love on his errand bound to go, IX:295.
Love scatters oil, IX:096.
Low and mournful be the strain, IX:205.
Man was made of social earth, IX:109.
Many things the garden shows, IX:343.
May be true what I had heard, IX:041.
Mine and yours, IX:036.
Mine are the night and morning, IX:244.
Mortal mixed of middle clay, IX:033.
Nature centres into balls, IX:282.
Never did sculptor's dream unfold, IX:298.
Night-dreams trace on Memory's wall, IX:295.

- No fate, save by the victim's fault, is low, **IX:349**.
Not in their houses stand the stars, **IX:303**.
October woods wherein, **IX:362**.
O fair and stately maid, whose eyes, **IX:095**.
O pity that I pause! **IX:187**.
O tenderly the haughty day, **IX:199**.
O well for the fortunate soul, **IX:208**.
O what are heroes, prophets, men, **IX:360**.
Of all wit's uses the main one, **IX:351**.
Of Merlin wise I learned a song, **IX:218**.
Oh what is Heaven but the fellowship, **IX:395**.
On a mound an Arab lay, **IX:100**.
On bravely through the sunshine and the showers, **IX:358**.
On prince or bride no diamond stone, **IX:301**.
On two days it steads not to run from thy grave, **IX:302**.
Once I wished I might rehearse, **IX:198**.
One musician is sure, **IX:237**.
Our eyeless bark sails free, **IX:341**.
Over his head were the maple buds, **IX:293**.
Pale genius roves alone, **IX:326**.
Parks and ponds are good by day, **IX:342**.
Philosophers are lined with eyes within, **IX:374**.
Power that by obedience grows, **IX:360**.
Put in, drive home the sightless wedges, **IX:347**.
Quit the hut, frequent the palace, **IX:291**.
Right upward on the road of fame, **IX:309**.
Roomy Eternity, **IX:350**.
Roving, roving, as it seems, **IX:210**.
Ruby wine is drunk by knaves, **IX:272**.
Samson stark at Dagon's knee, **IX:348**.
See yonder leafless trees against the sky, **IX:342**.

Seek not the spirit, if it hide, IX:086.
Seems, though the soft sheen all enchants, IX:347.
Set not thy foot on graves, IX:029.
She is gamesome and good, IX:226.
She paints with white and red the moors, IX:341.
She walked in flowers around my field, IX:351.
Shines the last age, the next with hope is seen, IX:295.
Shun passion, fold the hands of thrift, IX:358.
Six thankful weeks,—and let it be, IX:373.
Slighted Minerva's learnèd tongue, IX:334.
Soft and softlier hold me, friends! IX:256.
Solar insect on the wing, IX:343.
Some of your hurts you have cured, IX:294.
Space is ample, east and west, IX:279.
Spin the ball! I reel, I burn, IX:304.
Such another peerless queen, IX:350.
Sudden gusts came full of meaning, IX:310.
Tell me, maiden, dost thou use, IX:387.
Tell men what they knew before, IX:354.
Test of the poet is knowledge of love, IX:296.
Thanks to the morning light, IX:015.
That book is good, IX:331.
That each should in his house abide, IX:354.
That you are fair or wise is vain, IX:031.
The April winds are magical, IX:255.
The archangel Hope, IX:354.
The Asmodean feat is mine, IX:334.
The atom displaces all atoms beside, IX:331.
The bard and mystic held me for their own, IX:357.
The beggar begs by God's command, IX:350.
The brave Empedocles, defying fools, IX:353.

- The brook sings on, but sings in vain, **IX:332**.
The cold gray down upon the quinces lieth, **IX:348**.
The cup of life is not so shallow, **IX:387**.
The days pass over me, **IX:395**.
The debt is paid, **IX:257**.
The gale that wrecked you on the sand, **IX:293**.
The green grass is bowing, **IX:093**.
The heavy blue chain, **IX:376**.
The living Heaven thy prayers respect, **IX:275**.
The lords of life, the lords of life, **IX:269**.
The low December vault in June be lifted high, **IX:342**.
Theme no poet gladly sung, **IX:280**.
The mountain and the squirrel, **IX:075**.
The Muse's hill by Fear is guarded, **IX:334**.
The patient Pan, **IX:335**.
The prosperous and beautiful, **IX:084**.
The rhyme of the poet, **IX:123**.
The rocky nook with hill-tops three, **IX:212**.
The rules to men made evident, **IX:358**.
The sea is the road of the bold, **IX:293**.
The sense of the world is short, **IX:100**.
The solid, solid universe, **IX:257**.
The South-wind brings, **IX:148**.
The Sphinx is drowsy, **IX:020**.
The sun athwart the cloud thought it no sin, **IX:340**.
The sun goes down, and with him takes, **IX:227**.
The sun set, but set not his hope, **IX:273**.
The tongue is prone to lose the way, **IX:351**.
The water understands, **IX:344**.
The wings of Time are black and white, **IX:270**.
The word of the Lord by night, **IX:201**.

The yesterday doth never smile, **IX:253**.
Thee, dear friend, a brother soothes, **IX:009**.
There are beggars in Iran and Araby, **IX:320**.
There is in all the sons of men, **IX:393**.
There is no great and no small, **IX:282**.
There is no architect, **IX:128**.
They brought me rubies from the mine, **IX:217**.
They put their finger on their lips, **IX:362**.
They say, through patience, chalk, **IX:300**.
Thine eyes still shined for me, though far, **IX:099**.
Think me not unkind and rude, **IX:119**.
This is he, who, felled by foes, **IX:279**.
This shining moment is an edifice, **IX:350**.
Thou foolish Hafiz! Say, do churls, **IX:300**.
Thou shalt make thy house, **IX:354**.
Though her eyes seek other forms, **IX:388**.
Though loath to grieve, **IX:076**.
Though love repine and reason chafe, **IX:296**.
Thousand minstrels woke within me, **IX:060**.
Thy foes to hunt, thy enviers to strike down, **IX:303**.
Thy summer voice, Musketaquit, **IX:248**.
Thy trivial harp will never please, **IX:120**.
To and fro the Genius flies, **IX:352**.
To clothe the fiery thought, **IX:292**.
To transmute crime to wisdom, so to stem, **IX:332**.
Trees in groves, **IX:129**.
True Brahmin, in the morning meadows wet, **IX:292**.
Try the might the Muse affords, **IX:329**.
Two things thou shalt not long for, if thou love a mind serene, **IX:302**.
Two well-assorted travellers use, **IX:210**.
Unbar the door, since thou the Opener art, **IX:301**.

- Venus, when her son was lost, **IX:103**.
Was never form and never face, **IX:275**.
We are what we are made; each following day, **IX:395**.
We crossed Champlain to Keeseville with our friends, **IX:182**.
We love the venerable house, **IX:223**.
Well and wisely said the Greek, **IX:296**.
What all the books of ages paint, I have, **IX:339**.
What care I, so they stand the same, **IX:127**.
What central flowing forces, say, **IX:340**.
When all their blooms the meadows flaunt, **IX:340**.
When I was born, **IX:138**.
When success exalts thy lot, **IX:380**.
When the pine tosses its cones, **IX:043**.
When wrath and terror changed Jove's regal port, **IX:358**.
Who gave thee, O Beauty, **IX:087**.
Who knows this or that? **IX:375**.
Who saw the hid beginnings, **IX:366**.
Who shall tell what did befall, **IX:285**.
Why did all manly gifts in Webster fail? **IX:399**.
Why fear to die, **IX:390**.
Why lingerest thou, pale violet, to see the dying year, **IX:097**.
Why should I keep holiday, **IX:083**.
Wilt thou seal up the avenues of ill? **IX:357**.
Winters know, **IX:225**.
Wise and polite,—and if I drew, **IX:159**.
Wisp and meteor nightly falling, **IX:341**.
With beams December planets dart, **IX:293**.
With the key of the secret he marches faster, **IX:357**.
Would you know what joy is hid, **IX:345**.
Yes, sometimes to the sorrow-stricken, **IX:355**.
You shall not be overbold, **IX:233**.

You shall not love me for what daily spends, **IX:352**.

Your picture smiles as first it smiled, **IX:098**.

INDEX OF TITLES: POEMS

[The titles in small capital letters are those of the principal divisions of the work; those in lower case are of single poems, or the subdivisions of long poems.]

A. H., **IX:291**.

Ἄδακρυν νέμονται Αἰῶνα, **IX:297**.
